**FY 1999 RDT&E, ARMY
PROGRAM ELEMENT DESCRIPTIVE SUMMARIES**

INTRODUCTION AND EXPLANATION OF CONTENTS

1. General. This section has been prepared for the purpose of providing information concerning the Army Research, Development, Test and Evaluation program. The Descriptive Summaries are comprised of R-2 (Budget Item Justification Sheet) and R-3 (RDT&E Program Element/Project Cost Breakdown) Exhibits which provide narrative information on all RDT&E program elements and projects for the FY 1997, 1998 and 1999 time period.

2. Relationship of the FY 1999 Budget Submission to the FY 1998 Budget submitted to Congress. This paragraph provides a list of program elements restructured, transitioned, or established to provide specific program identification.

A. Program Element Restructures. Explanations for these changes can be found in the narrative sections of the Program Element R-2/R-3 Exhibits.

<p><u>Mission Description and Budget Item Justification:</u> In an 18 April 1997 Memorandum of Agreement between the US Army Training and Doctrine Command (TRADOC) and the US Army Space and Strategic Defense Command (USASSDC), USASSDC was designated the specified proponent for space and National Missile Defense (NMD) and the overall integrator for Theater Missile Defense (TMD). In response to this designation, the Missile Defense Battle Integration Center (MDBIC) and other existing USASSDC elements were reorganized and merged to form the Space and Missile Defense Battle Lab (SMDBL). The SMDBL is chartered to develop warfighting concepts, focus military science and technology research, and conduct warfighting experiments. In addition, this program element funds the integration and synchronization of the functions, activities, events, and actions associated with space and NMD Doctrine, Training, Leader development, Organization, Materiel development and Soldiers (DTLOMS) development and implementation; as well as, the systems analysis, studies, and experimentation designed to validate and integrate the pillars of TMD: active defense, passive defense, attack operations, and battle management/command, control, communications, computers, and intelligence functions. Finally, this program element funds the completion of the joint U.S./Israeli Tactical High Energy Laser (THEL) Advanced Concept Technology Demonstration (ACTD). Work in this program element is dedicated to efforts to demonstrate general military utility to include demonstration and validation in the area of TMD and is appropriately funded in Budget Activity 4.</p>

<p>A. <u>Mission Description and Justification:</u> These funds will complete the Tactical High Energy Laser (THEL) Advanced Concept Technology Demonstration (ACTD) and field testing at the High Energy Laser Systems Test Facility (HELSTF). The THEL ACTD is a joint U.S./Israel program to design, fabricate, and test a tactical-sized THEL demonstrator to evaluate the effectiveness of high energy lasers (HELs) to defeat the threat posed by Katyusha and similar short range artillery rockets. The THEL ACTD is an integration effort that supports the active defense pillar of Theater Missile Defense.</p> <p><u>Acquisition Strategy:</u> The THEL ACTD has been assigned an urgent priority by the Secretary of Defense. A sole source letter contract was executed with TRW, Inc. to deliver the THEL demonstrator by 31 Mar 1998. The letter contract was definitized on 19 Jan 97. A change order to this contract is planned to include field testing of the demonstrator at HELSTF, to be completed by 1 Oct 98.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 41181 Continued THEL ACTD design and fabrication. ■ 1500 Conducted system engineering, analysis and subsystem integration activities. ■ 2611 Conducted program management. ■ 1100 Provided government furnished property. <p>Total 46392</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 7700 Complete the THEL demonstrator integration and testing at TRW. ■ 8257 Conduct system engineering, analysis, system integration activities, and field test support. ■ 29600 Complete integration at HELSTF and conduct field testing. ■ 2590 Conduct program management. ■ 1238 Small Business Innovative Research/Small Business Technology Transfer Programs. <p>Total 49385</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p>

D990 Space and Missile Defense (SMD) Integration	2748	2602	2989	3048	3110	3171	3236	Continuing	Continuing

A. Mission Description and Justification: In an 18 April 1997 Memorandum of Agreement between the US Army Training and Doctrine Command (TRADOC) and the US Army Space and Strategic Defense Command (USASSDC), USASSDC was designated the specified proponent for space and National Missile Defense (NMD) and the overall integrator for Theater Missile Defense (TMD). This project funds the Force Development and Integration Center, a major support element of USASSDC, created to execute the integration and synchronization of the functions, activities, events, and actions associated with space and NMD Doctrine, Training, Leader development, Organization, Materiel development and Soldiers (DTLOMS) development and implementation. In addition, this project funds systems analysis, studies, and experimentation designed to validate and integrate the pillars of TMD: active defense, passive defense, attack operations, and battle management/command, control, communications, computers, and intelligence functions. Finally, this project funds the production of hardware and software solutions, doctrinal and procedural solutions, interfaces, and architectures for TMD. These inter-pillar and intra-pillar products, required to accomplish the integrated TMD mission, exceed the scope of other programs. This program supports the milestone decisions for active defense missile and C4I systems, as well as Aviation and Artillery attack operation systems and passive missile defense materiel solutions.

Acquisition Strategy: Program is continuous. Planned accomplishments will be conducted by various performers.

FY 1997 Accomplishments:

■	2748	Planned, developed, and conducted management oversight of testing and exercise prototypical hardware and software related to integrated TMD operations, enhancements to models and simulations, systems analysis and studies regarding TMD issues.
Total		2748

FY 1998 Planned Program:

■	2536	Integrate and synchronize the functions, activities, events, and actions associated with space and NMD DTLOMS development and implementation; and plan, develop, and conduct management oversight of testing and exercise prototypical hardware and software related to integrated TMD operations, enhancements to models and simulations, systems analysis and studies regarding TMD issues.
■	66	Small Business Innovative Research/Small Business Technology Transfer Programs.

D997 Space and Missile Defense Battle Lab (SMDBL)	19065	21317	9251	9178	9092	12069	12222	Continuing	Continuing

A. Mission Description and Justification: This project funds the Space and Missile Defense Battle Lab (SMDBL), (formerly the Missile Defense Battle Integration Center (SMDBIC)). The SMDBL is chartered to develop warfighting concepts, focus military science and technology research, and conduct warfighting experiments. It will provide users and materiel developers a synthetic battlefield context for integrating missile defense and space assets; supporting requirement activities and providing distributed, netted computing resources, models and simulations efforts for warfighter exercises, analytical and virtual prototyping activities. To accomplish this, the SMDBL will concentrate on: Experiments, Exercises and Training; Modeling and Simulation (M&S); Concepts and Initiatives; Analysis; the Synthetic Battlefield Environment (SBE); the Extended Air Defense Testbed (EADTB); and the Extended Air Defense Simulation (EADSIM).

Acquisition Strategy: Program is continuous. Planned accomplishments will be conducted by various performers.

FY 1997 Accomplishments:

- 6100 Participated in/supported Army and joint exercises/training and warfighting experiments, including Optic Windmill, Prairie Warrior, the Confederation Test, Coherent Defense, Army Experiment 4, and JTFEX 98-1.
- 4193 Completed additional development of the SBE, to include various interfaces to enhance the realism and fidelity of missile defense training, exercises, and testing.
- 2078 Conducted "stand alone" training and further developed AAR capabilities for Force XXI command and control entities.
- 3943 Performed missile defense studies and analyses by providing enhancements/developments to advanced models and simulations, incorporating existing testbeds and migrating to the DoD's High-Level Architecture (HLA).
- 2751 Provided modeling, simulation, and advanced visualization capabilities for senior decision makers via the Warfighting Analysis and Integration Center (WAIC).

Mission Description and Budget Item Justification: This program element provides for advanced development of new mine and countermine systems by prototyping modern munitions technology, advanced development sensors, logic networks, fuzes, power sources, warhead components and modules into complete systems. It provides for advanced development of Non-Self-Destructing Anti-Personnel Landmine Alternatives (NSD-A) and the Intelligent Combat Outpost (Raptor) which will significantly enhance minefield effectiveness through coordinated attack/tactics and elimination of overwatch forces. It also provides for the initiation and/or continuation of advanced development of the Airborne Stand-off Minefield Detection System (ASTAMIDS), the Handheld Stand-off Minefield Detection System (HSTAMIDS), Ground Stand-off Minefield Detection System (GSTAMIDS) and for mine neutralization with the Explosive Stand-off Minefield Breacher (ESMB), and Anti-personnel Obstacle Breaching System (APOBS). This program element supports Program Definition and Risk Reduction (PDRR) efforts used to demonstrate and validate general military utility and is, therefore, appropriately placed in Budget Activity 4.

This document is not releasable to non-DoD personnel

<p>A. <u>Mission Description and Justification:</u> Intelligent Combat Outpost (Raptor) will improve the capability of smart mines/munitions used by the United States Army and will enhance the effectiveness of current and future mines/munitions by providing real time targeting data, increased situational awareness, and coordinated attack capabilities while eliminating the need for overwatch forces. NSD-A program will identify and develop alternatives to Non-Self Destructing Anti-Personnel landmines.</p> <p><u>Acquisition Strategy:</u> For Raptor, a Sole Source PDRR contract will be awarded to Textron Defense Systems (Wide Area Munition developer). Decision to continue sole source into EMD phase or initiate a competitive solicitation will be evaluated based on PDRR phase results. For NSD-A 12 solicitation respondents will be requested to submit proposals for their alternative concepts. CPIF contracts for two of the best proposals will be awarded for the Early User Experiment (EUE) Phase. At the conclusion of the EUE one contractor will be selected to continue into the EMD and Production Phases.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%;">1000</td> <td>Conduct Raptor interoperability study, trade-off analysis, system integration/analyses, and evaluate methods for Identification, Friend or Foe (IFF).</td> </tr> <tr> <td style="text-align: center;">■</td> <td>1265</td> <td>Initiate design and development of Raptor gateway, advanced acoustic sensor, and control station.</td> </tr> <tr> <td style="text-align: center;">■</td> <td>950</td> <td>Initiate Raptor software algorithm development.</td> </tr> <tr> <td style="text-align: center;">■</td> <td>344</td> <td>Raptor Test and evaluation.</td> </tr> <tr> <td style="text-align: center;">■</td> <td>2000</td> <td>NSD-A solicitation preparation, white paper evaluations, and alternative concept proposal preparation and evaluation</td> </tr> <tr> <td style="text-align: center;">■</td> <td>4000</td> <td>NSD-A Early User Experiment</td> </tr> <tr> <td style="text-align: center;">■</td> <td>91</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs</td> </tr> <tr> <td style="text-align: center;">Total</td> <td>9650</td> <td></td> </tr> </table>										■	1000	Conduct Raptor interoperability study, trade-off analysis, system integration/analyses, and evaluate methods for Identification, Friend or Foe (IFF).	■	1265	Initiate design and development of Raptor gateway, advanced acoustic sensor, and control station.	■	950	Initiate Raptor software algorithm development.	■	344	Raptor Test and evaluation.	■	2000	NSD-A solicitation preparation, white paper evaluations, and alternative concept proposal preparation and evaluation	■	4000	NSD-A Early User Experiment	■	91	Small Business Innovative Research/Small Business Technology Transfer Programs	Total	9650

<p>A. <u>Mission Description and Justification:</u> This project provides for advanced development of new countermine systems by prototyping advanced sensors for evaluation of neutralizing, clearing, breaching and detection concepts which will enhance the U.S. capability in countermine warfare. The program includes the Airborne Stand-off Minefield Detection System (ASTAMIDS), the Handheld Stand-off Minefield Detection System (HSTAMIDS), Ground Stand-off Minefield Detection System (GSTAMIDS), Explosive Stand-off Minefield Breacher (ESMB), and Anti-personnel Obstacle Breaching System (APOBS). The program provides for proof-of-principle for these systems.</p> <p><u>Acquisition Strategy:</u> : ASTAMIDS, HSTAMIDS, and GSTAMIDS - competing contractors (2 for each project) competitively selected for PDRR phase which will lead to a down select for the EMD phase. Successful EMD contractor will be awarded initial production contract (sole source) with multiple option year buys. ESMB competitively selected PDRR phase contractor will be awarded a sole source EMD contract upon completion of PDRR phase and MDA approval. Sole source Production contract with multiple options is anticipated for successful EMD contractor.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 7980 Completed initial PDRR design for HSTAMIDS ■ 1445 Fabricated HSTAMIDS Test hardware ■ 2700 Conducted System Trade off analysis and complete ESMB PDRR design ■ 3000 Fabricated ESMB Test hardware and conduct contractor/government testing ■ 551 Prepared ESMB MS II IPR documentation ■ 10145 Completed ASTAMIDS design, fabricate hardware, and conduct EUT&E ■ 1300 Evaluated Alternative ASTAMIDS Minefield Detection /Sensor Technologies ■ 43 Prepared APOBS MS III and contract solicitation documentation Total 27164 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 5344 Complete HSTAMIDS PDRR design and conduct contractor testing ■ 1393 Conduct TT/EUT&E for HSTAMIDS ■ 805 Prepare HSTAMIDS MS II documentation and EMD contract solicitation ■ 3507 Fabricate GSTAMIDS prototype hardware and contractor management

<p><u>Mission Description and Budget Item Justification:</u> U.S. Forces must be able to effectively neutralize and degrade energy weapon systems and threat electro-optical systems/smart weapons that operate in the full range of the electro-magnetic spectrum. These program elements support the demonstration/validation (DEMVAL) of logistically supportable, high performance smoke and obscurant agents, munitions and devices to improve the survivability of the combined arms force and complement combined weapons systems. Improvements are sought across the entire multi-spectral range from visual through infrared (IR) and millimeter wavelengths (MMW) radar for incorporation into self-protection large area and project smoke systems. The smoke obscuration technologies supported by this program enhance smoke systems as combat multipliers. This program element focuses on efforts associated with advanced technology development used to demonstrate general military utility to include demonstration and validation in the area of Smoke, Obscurant & Equip Systems Engineering and is correctly placed in Budget Activity 4.</p>

Mission Description and Budget Item Justification: The Armament Enhancement Initiative (AEI) is a comprehensive program to accelerate fielding of advanced tank ammunition and ensure the continued lethality of the U.S. tank fleet despite rapid worldwide development of armored vehicle protection technology. The AEI program identifies promising technology efforts and uses competitive developments and streamlined acquisition procedures to achieve this goal. Current developments are in the areas of kinetic energy, including associated training ammunition, and smart top attack rounds with an anti-helicopter capability. Future efforts include paced initiatives leading to new developments or upgrades to existing and future weapons platforms. To date, four rounds of tank ammunition have completed development and entered production. All tank ammunition development funds are combined into one program element PE to facilitate transition between phases, avoid administrative delays, and allow realignment of funds from less to more promising areas. Budget Activity 4, Demonstration and Validation, is the most appropriate budget activity for the projects within this PE.

A. Mission Description and Justification: Kinetic energy cartridges provide the primary anti-tank capability for the armor force. Providing lethal 120mm munitions is essential in maintaining the overmatch capabilities of the Abrams tank. This point is particularly important since the Army will proceed with limited improvements to the Abrams after the Systems Enhancement Program (SEP), and because the future tank (Future Combat System) is not expected to enter the fleet in quantity until after the 2020 timeframe. Therefore, the 120mm Abrams tank will likely make up the bulk of our tank inventory for at least the next 25 years. The focus of the AEI program is first on the development and production of the M829E3 KE cartridge to defeat the growing advanced KE reactive armor threat. Additionally, production of the M829E3 is critical in maintaining the health of the Depleted Uranium (DU) industrial base. The Army was developing a Smart Target Activated Fire and Forget (STAFF) top attack smart munition. However, for cost reasons the STAFF program is being terminated in FY 98.

Acquisition Strategy: M829E3 & STAFF These projects have used a streamlined acquisition strategy since inception. Schedule and fielding have been paramount while keeping costs low. Integrated Product Teams (IPTs) are being used for both the STAFF and M829E3 programs. A development system contractor, Alliant Techsystems, was selected from a limited number of munitions production base contractors to develop STAFF. The M829E3 will follow the same procedure once the program matures to that point. STAFF will terminate after 2QFY98.

FY 1997 Accomplishments:

KE

- 7409 Manufactured high energy propulsion system for velocity improvements
- 2150 Performed producability engineering and design optimization of projectile
- 9430 Prototype manufacturing and ballistic testing accomplished
- 3200 Continued optimization of penetrator

STAFF

- 8300 Built and tested final subsystem hardware
- 6700 Built tactical demonstration hardware
- 2200 Tested tactical demonstration hardware

Total 39389

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603639A Armament Enhancement Initiative				PROJECT D656	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D656 X-ROD	17298	14533	0	0	0	0	0	0	155474

A. Mission Description and Budget Item Justification: The X-Rod, now known as the Tank Extended Range Munition - KE (TERM-KE) is a 120mm tank ammunition development effort which will use a standard kinetic energy penetrator boosted by a rocket motor and millimeter wave radar fire-and-forget guidance. The TERM-KE will provide greater hit probability at extended ranges, increasing overall kill probability and battle space.

Acquisition Strategy: This program uses a streamlined acquisition strategy. The program is in the Proof of Principle phase. A unique system contracting strategy to prove out innovative component technologies was instituted at inception of the program. A modified Integrated Product Team is being used to leverage the expertise of both the Army and the contractor, Alliant Techsystems (formerly Hercules). In FY 96 the Army terminated the TERM-KE program for affordability reasons. Termination was to take place in FY 97. However, the program continued through congressional plus-up received in FY 97 legislation. This last year was used to package the results of testing for a possible future Tank Extended Range Munition (TERM) advanced technology demonstration.

FY 1997 Accomplishments:

- 4025 Interior ballistics exit criteria
- 3412 Met Guide-to Hit exit criteria
- 6311 Demonstrated in-flight discard exit criteria
- 3550 System analysis and concept baseline for TERM performed
- Total 17298

FY 1998 Planned Program:

- 1050 Interior ballistics exit criteria
- 4800 Lethality demonstrations
- 3900 Unguided All Up Round (UAUR) exit criteria
- 4418 System analysis and system design baseline for TERM
- 365 Small Business Innovative Research/Small Business Technology Transfer Program
- Total 14533

FY 1999 Planned Program: Project not funded in FY 1999

<p>A. Mission Description and Budget Item Justification: This program element focuses on the development of the Modular Artillery Charge System (MACS), intended for use with fielded 155mm field artillery systems equipped with M199 and M284 39 caliber cannons and the XM297 cannon under development for use on Crusader. The MACS includes two different types of charge increments - the XM231 designed to achieve ranges in zones 1 and 2, and the XM232 designed to achieve ranges in zones 3-6. Each increment contains propellant, an ignition system, and performance enhancing additives that are loaded in a combustible case. Funding for this effort transitions to PE 0603854A, Project D505 in FY 1999. This program element focuses on the technology demonstration and validation of the MACS and is correctly placed in Budget Activity 4.</p> <p>Acquisition Strategy: Not applicable</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 6637 Continued development of MACS for type classification. 442 Provided project management support and management engineering services. 1024 Initiated preliminary testing for 39 caliber type classification. <p><u>Mission Description and Budget Item Justification:</u> Project DQ19, Future Combat System, invests in high pay-off advanced technologies for the next tank beyond the M1A2. Several candidate technologies are being currently evaluated in the science and technology base. Project D018, Future Scout Vehicle, funds the development and demonstration phase of the Future Scout Vehicle (FSV), now known as the Future Scout and Cavalry System (FSCS). The FSCS will replace the current ground scout systems in the battalion/brigade and division/regiment levels. This project will fund finalization of requirements definition, design definition, sensor maturation, and software integration efforts. All projects in this program element fund the advanced development phase of Army combat systems and are therefore correctly placed in Budget Activity 4.</p>

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998			
BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603645A Armored Systems Modernization - Advanced Development					PROJECT DQ19	
COST <i>(In Thousands)</i>	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
DQ19 Future Combat System	1612	0	0	2004	24843	28877	38457	Continuing	Continuing	

A. Mission Description and Justification: The Future Combat System (FCS) will be the Army's replacement for the Abrams Main Battle Tank. The M1A2 System Enhancement Program (SEP) tank (see Project D330) is expected to continue in service until 2015 or later. The FCS will feature leap ahead capabilities in mobility, survivability, lethality, and sustainability. In FY 97 Congress provided a plus-up to initiate Future Combat System studies and investigate improvements to the M1A1 and M1A2 tanks. The main effort before FY 00 is now being conducted in early S&T (PEs 0601104A, 0602618A, 0602601A, 0602624A). Ongoing S&T programs are developing and maturing competing main armament concepts, such as electromagnetic, electrothermal-chemical, and conventional technologies. The size, power and weight differences of any of these concepts is the major system design driver for FCS.

Acquisition Strategy: At this stage, the focus is on maturing candidate technologies in the tech base, prior to enter system development. The acquisition strategy will stress competition in development and production.

FY 1997 Accomplishments:

■	1612	Initiated Future Combat System concept studies
Total	1612	

FY 1998 Planned Program: Program not funded in FY 98

FY 1999 Planned Program: Program not funded in FY 99

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY 1998/1999 President's Budget	7803	0	0
Appropriated Value	8000		
Adjustments to Appropriated Value	-		
	6388		
FY 1999 President's Budget	1612	0	0

Change Summary Explanation: FY 97 decrease (-6000) due to Congressional rescission in FY 98 appropriation; -197 for undistributed Congressional reductions.

D018 Future Scout Vehicle (FSV) - Advanced Development	0	1945	0	0	0	0	0	0	1945																				
<p>A. <u>Mission Description and Justification:</u> The Future Scout Vehicle (FSV), now known as the Future Scout and Cavalry System (FSCS), is the Army's next generation ground reconnaissance and intelligence gathering, combat vehicle system. FSCS will provide Army reconnaissance elements a platform with significant improvements in vehicle mobility, survivability, lethality, target acquisition and communication capabilities through integration of advanced technologies. Advanced sensors and communication systems, combined with sophisticated vehicle signature management, will significantly enhance the scout's capability to rapidly detect, identify, recognize, and hand-off multiple targets to field commanders under all conditions and in all environments.</p> <p><u>Acquisition Strategy:</u> Plans call for the competitive award of contracts to two US/UK consortia who will be given responsibility for development of an FSCS design concept and fabrication of a demonstration vehicle. Extensive modeling and simulation will be used to meet, verify, validate and finalize system requirements, and establish a design definition baseline. The baseline will support follow-on Engineering and Manufacturing Development (EMD). During the building of the Program Objective Memorandum, this project was restructured, transferring funds to support the FSCS Advanced Technology Demonstration (PE 0603005A) and to fund FSCS EMD (PE 0604645A).</p> <p>FY 1997 Accomplishments: Project not funded in FY 97</p> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 10px;">■</td> <td style="width: 10px;">1896</td> <td>Initiate Project Management (PM); Integrated Product Team Studies</td> </tr> <tr> <td>■</td> <td>49</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs</td> </tr> <tr> <td colspan="2">Total</td> <td>1945</td> </tr> </table> <p>FY 1998 Planned Program: Project not funded in FY 99</p>										■	1896	Initiate Project Management (PM); Integrated Product Team Studies	■	49	Small Business Innovative Research/Small Business Technology Transfer Programs	Total		1945

<p>A. <u>Mission Description and Budget Item Justification:</u> The Grizzly (M1 Breacher) will provide the Combat Engineer with significantly improved mission effectiveness and crew/vehicle survivability while clearing minefields and removing complex natural and man-made obstacles at the forward edge of the battlefield. The Grizzly will be capable of moving with, and be as survivable as, the force it is supporting. The system provides a critical resource for executing in stride breaches, supporting the Force XXI maneuver commander's goals of information and maneuver dominance on the battlefield. The Grizzly, a single, survivable breach platform, gives the Combat Engineer a capability that does not currently exist in today's complex obstacle breaching operations, and will facilitate successful execution of ground combat mission requirements by maneuver forces. This program element supports Program Definition and Risk Reduction (PDRR) efforts and is appropriately placed in Budget Activity 4.</p> <p><u>Acquisition Strategy:</u> Research and development efforts have leveraged the accomplishments of the Combat Mobility Vehicle Advanced Technology Transition Demonstrator (CMV-ATTD) contract. Design modifications were written into the Advanced Development contract for the powertrain and other chassis components/systems necessary to insure that the Grizzly meets the mission profile required by the Operational Requirements Document. In FY 1997 the project transitioned to PE 0604649A, DG25, for the Engineering and Manufacturing Development (EMD) phase.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%; text-align: right;">498</td> <td style="width: 80%;">Refined and Applied Engineering Changes</td> </tr> <tr> <td>Total</td> <td style="text-align: right;">498</td> <td></td> </tr> </table> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> <tr> <td>Appropriated Value</td> <td style="text-align: center;">0</td> <td></td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td style="text-align: center;">498</td> <td></td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: center;">498</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> </tbody> </table>										■	498	Refined and Applied Engineering Changes	Total	498			<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	FY 1998/1999 President's Budget	0	0	0	Appropriated Value	0			Adjustments to Appropriated Value	498			FY 1999 President's Budget	498	0	0

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998		
BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603653A Advanced Tank Armament System				PROJECT DB99	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DB99 Advanced Tank Armament System	11144	8704	8928	0	0	0	19950	0	62834

A. Mission Description and Budget Item Justification: The goal of the Advanced Tank Armament System (ATAS) program is to sustain overmatch superiority over increasingly more capable future enemy tanks. The ATAS program is one of the principal programs supporting tank lethality improvements. The program is developing and demonstrating a number of key gun and fire control technologies which offer significant payoffs in lethality for the current tank fleet, the next upgrade to the M1A2 Abrams tank as well as other future weapon system platforms. However, due to funding reductions and ongoing cost reduction initiatives, the program has been restructured to meet mission needs through CAIV (Cost As an Independent Variable).

The ATAS Program has two main phases. Phase I develops and demonstrates in FY 98, autotarget tracking technology that is applicable to the current M1 Abrams series of tanks. Phase I is a requirements oriented, Combat Developer (user) directed program that increases tank lethality by allowing the tank crew to quickly kill enemy battlefield targets. Phase I technology, when applied to tank training devices, will also reduce tank crew training costs by reducing the amount of training necessary for new gunners to perform proficiently. Phase II demonstrates a highly lethal long 120mm tank main gun that can kill advanced enemy tanks at long range. Phase II also develops advanced fire control system components that give the user the ability to consistently and accurately hit these long range targets. In FY 97, due to a congressional plus-up, the program began the design of the compact autoloader for a possible test demonstration in FY 99 in an M1A2. Maturation of the long 120mm gun and fire control components will continue through FY 98. Gun maturation includes the first application of wear resistant barrel coatings to a 120mm gun tube to reduce gun barrel erosion. Also, the development of a barrel vibration absorber as well as an improved MRS (Muzzle Reference System), thermal shroud and bore evacuator will be pursued. Advanced fire control components including Digital Adaptive Stabilization, modular reuseable software and system simulators will also be developed to increase fire-on-the move accuracy. These items will be completed, tested and integrated into an M1A2 test tank in FY99 for a technology demonstration. ATAS technology may also be applied to Future Weapon Systems platforms such as the Future Scout and Cavalry Vehicle and Future Combat System (FCS) in both large and medium calibers to reduce the overall cost of Army weapon system development. Long 120mm gun Engineering Manufacturing Development (EMD), which was to begin in FY 00 to prepare the cannon for possible integration into the Abrams tank, has been eliminated due to funding constraints.

The ATAS program is conducting prototyping, testing and early operational assessment of critical tank armament systems, subsystems, and components; identifying cost drivers and alternatives using modeling and simulation, and working with the user representative to establish performance objectives and identify cost-schedule-performance trade-offs. ATAS is also demonstrating component performance enhancements for application to future Abrams upgrades, and is appropriately placed in Budget Activity 4.

Acquisition Strategy: The technologies in ATAS will be demonstrated then transferred to PM Abrams for further technical development. Technologies in ATAS may flow into the next major upgrade or Engineering Change Proposal (ECP) to the current Abrams tank. Several contractors and government agencies are used to develop or integrate existing technologies.

Mission Description and Budget Item Justification: The Army Data Distribution System (ADDS), which consists of the Enhanced Position Location Reporting System (EPLRS), the Joint Tactical Information Distribution System (JTIDS), Multifunctional Information Distribution System (MIDS) and the Near Term Digital Radio (NTDR) provides support to the Army's air defense, fire support, maneuver control, intelligence and combat service support automated system. Project D370 is capable of "digitizing data messages" that must be transmitted on the battlefield. It is capable of providing multi-functions; data communications, unit locations and unit identification. The ADDS network automatically utilizes manpack, surface vehicle and airborne vehicle user units to achieve range extension. It has been designated specifically to meet the data communications requirements of emerging tactical automated data processing and sensor based systems. The ADDS will provide reliable, real-time, secure, jam-resistant data communications and position location capabilities to the soldier and his unit commander. These projects focus on efforts associated with advanced technology development used to demonstrate general military utility to include demonstration and validation in the area of Army Data Distribution and are correctly placed in Budget Activity 4.

A. Mission Description and Budget Item Justification : The Near-Term Digital Radio (NTDR) is a Research and Development program to procure systems for test and experimentation. It will provide the TOC-to-TOC communication function for the First Digitized Corps. The program's vision is to create the Army Communication data backbone for Platoon to Brigade for Force XXI. It is one of the seven major elements which will provide a seamless digital communication capability throughout the fighting force for the Digital battlefield of the 21st century. To allow the NTDR to evolve and to make maximum use of technology insertion, it is based on an open architecture which allows programmability and future expansion. The project will provide reliable, real time, secure, jam-resistant data communications and position location capabilities to the soldier and to his unit commander. This project provides data distribution support to the Army's air defense, fire support, maneuver control, intelligence and combat service support automated systems, and is capable of "digitizing data messages" that must be transmitted on the battlefield. Funding for a portion of development of the Joint Tactical Radio (JTR) is contained in this project beginning FY01. The JTR will have a multiservice, multifunctional, multiband, wide bandwidth radio capability, able to host multiple legacy waveforms and will also contain multi-level security. It will be a family radio (Information Transport Devices) products that will include manpack, airborne, shipboard, and vehicular configurations. It is a mission essential system and will operate as Tactical Communications System of the Command and Control (C2) Mission Area to provide a means for transport Information Exchange Requirements (IERs) between users throughout the battlefield. Various configurations of JTR user radios will support a wide variety of users in networks that will range from low capacity voice or data nets to high capacity video links for Wide Area Networks (WANS) covering large geographic areas. The Joint Tactical Information Distribution Systems (JTIDS)/LINK-16 portion of ADDS program is a joint program representing all services and allied force requirements with the purpose of acquiring a digital information system for tactical interoperability and awareness which complies with the ASD/C3I policy establishing LINK-16 as the DoD Defense Control Centers, and to control air and missile defense weapon engagement operations.

Acquisition Strategy: The NTDR program maximizes the use of Non-Development Item (NDI) and Commercial Off-The-Shelf (COTS) hardware and software. An RDTE contract was awarded competitively in January 1996. In FY97/98, the NTDR units will be utilized for testing and experiments both at Electronic Proving Ground (EPG) and in Division XXI which will focus on enhancing the command and control aspects of maneuver warfare. The Multifunctional Information Distribution System (MIDS) program is a Navy managed joint services development program currently viewed as an eventual low cost replacement for parts of the JTIDS family of high speed data terminals. Remaining effort in FY97 for the EPLRS program is for required Network Control Station - EPLRS (Downsized)(NCS-E(D)) documentation.

FY 1997 Accomplishments:

-  15573 Continued NTDR Program
-  1483 Program Management Activities for NTDR
-  478 MIDS Contract Development/Engineering Support
-  1100 NTDR Testing
-  621 Documentation for EPLRS Net Control Station Downsized (NCS-E(D))

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)								DATE February 1998	
BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603713A Army Data Distribution System				PROJECT D385	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D385 JTIDS (LINK 16)	0	0	6300	0	0	0	0	0	6300

A. Mission Description and Budget Item Justification: The Joint Tactical Information Distribution (JTIDS)/LINK-16 portion of the ADDS program provides a joint and allied interoperable LINK-16 tactical digital data and voice comm link among air, ground surface and subsurface platforms. LINK-16 is the DoD directed standard for tactical communications of all processed data and is DoD's primary tactical data link for C2I. Link-16 supports the Army's Theater Air and Missile Defense Engagement Operations. The Army intends to migrate to the Multifunctional Information Distribution System (MIDS) through investment in an Army variant of that multi-national terminal. This project is not a new start, but rather a continuation of an effort begun under 0603713A, project D370.

Acquisition Strategy: The Multifunctional Information Distribution System (MIDS) program is a Navy managed joint services development program currently viewed as an eventual low cost replacement for parts of the Joint Tactical Information Distribution System (JTIDS) family of high speed data terminals.

FY 1997 Accomplishments: Project not funded in FY 97

FY 1998 Planned Program: Project not funded in FY 98

FY 1999 Planned Program:

■	504	Program Activities for MIDS
■	3100	MIDS Testing
■	2696	Continue MIDS Program
Total		6300

D2QT EPLRS/JTIDS Operational Test	3444	0	0	0	0	0	0	0	4105

A. Mission Description and Budget Item Justification: This project finances the direct costs of planning and conducting operational testing and evaluation of the EPLRS/JTIDS by the Operational Test and Evaluation Command (OPTEC). JTIDS is an Acquisition Category (ACAT) I system with an Initial Operational Test and Evaluation (IOT&E) beginning 1QFY97. Operational Testing is conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system.

<p>A. <u>Mission Description and Budget Item Justification:</u> This Program Element funds application and validation of advanced computer software and hardware technologies to intelligence fusion analysis functions and prototype development, integration and evaluation of improved tactical intelligence fusion capabilities. This project supports the urgent requirement for an automated tactical intelligence processing system through technology insertion into, and development and evaluation of, prototype upgrades to the All Source Analysis System (ASAS), both during development and after fielding and therefore is appropriately placed in Budget Activity 4.</p> <p><u>Acquisition Strategy:</u> This project consists of studies, prototype development and evaluation of the integration of tactical intelligence fusion capabilities into existing systems. The efforts are for joint advanced technology research via contractors, Joint Propulsion Laboratory (JPL), a Federally Funded Research and Development Center (FFRDC), and some funds flowing down to colleges and universities as grants under oversight of JPL.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 500 Continued to investigate, develop and apply advanced software and hardware processing, storage, display and input/output (I/O) technologies to tech base prototypes of high-performance, expanded intelligence fusion capabilities 2487 Continued to evaluate, configure and integrate tech base prototype capabilities into operational ASAS prototypes and ASAS Block II development 850 Continued to support the development, evaluation and refinement of ASAS operational prototypes and their integration into mainline ASAS development and acquisition per the Joint Prototyping Plan <p>Total 3837</p> <p>FY 1998 Planned Program: Program not funded in FY98</p> <p>FY 1999 Planned Program: Program not funded in FY99</p> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY1998/1999 President's Budget</td> <td style="text-align: center;">3941</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> <tr> <td>Appropriated Value</td> <td style="text-align: center;">4025</td> <td></td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td style="text-align: center;">-188</td> <td></td> <td></td> </tr> <tr> <td>FY1999 President's Budget</td> <td style="text-align: center;">3837</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> </tbody> </table>											<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	FY1998/1999 President's Budget	3941	0	0	Appropriated Value	4025			Adjustments to Appropriated Value	-188			FY1999 President's Budget	3837	0	0

<p><u>Mission Description and Budget Item Justification:</u> Provide advanced development for unit/organizational equipment, improved individual clothing and equipment, fabric shelters, food and field service equipment which will enhance soldier battlefield effectiveness, survivability, sustainment and quality of life. Program element supports advanced development of a new generation of field service support items and shelters, including collective protection and shelter heaters for unit/organizational use to enhance the quality of life of field soldiers and the ability to project forces to spartan environments. Program element also supports advanced development of individual clothing and equipment items to lighten the soldier's load and incorporate protection against chemical and biological agents, thermal nuclear flash, ballistic threats, visual and electronic detection and environmental hazards. The projects in this Program Element focus on efforts to demonstrate general military utility, to include demonstration and validation, and are, therefore, correctly placed in Budget Activity 4.</p>

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603747A Soldier Support and Survivability				PROJECT DC09	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DC09 Unit/Organizational Equipment	2124	1895	1609	1851	2254	1804	2224	Continuing	Continuing

A. Mission Description and Justification: Develop and field soft shelters, showers, latrines, heaters, mortuary affairs, organizational equipment and other combat service support equipment to improve unit sustainability and combat effectiveness.

Acquisition Strategy: Accelerated Product developments and testing which transition to Engineering and Manufacturing Development and/or Production.

FY 1997 Accomplishments:

■	733	Awarded Modular General Purpose Tent System (MGPTS) low rate initial production (LRIP) contract with 4 optional production periods.
■	202	Converted and tested existing Ammunition Solar Shade stock as possible non-materiel alternative to Ammunition Solar Cover requirement.
■	435	Awarded Lightweight Maintenance Enclosure (LME) LRIP contract with 4 optional production periods.
■	322	Completed pre-qualification test for the Ballistic Protective System (BPS)
■	432	Completed development of thermoelectric Space Heater Small (SHS) prototype for improved heat distribution and increased efficiency. Completed development of the Space Heater Arctic (SHA) and the Space Heater Small. Prepared Integrated LRIP/FRP contract.
Total		2124

FY 1998 Planned Program:

■	100	Conduct shelter/heater habitability study to validate applications for the distribution of the SHA, SHS, and H45.
■	200	Type Classify BPS and prepare performance specification. Prepare LRIP contract with production options.
■	347	Conduct market survey of the Family of Field Latrines (FOFL). Fabricate prototypes of the Follow-On-Latrine. Conduct limited Technical Testing and Type Classify the Performance Specification. Procure prototypes of the Maturing Theater Latrine (MTL) and initiate test and evaluation.
■	600	Procure modified non-developmental item (NDI) prototypes of the Aviation Maintenance Shelter (AMS) and conduct technical testing.
■	300	Complete Ammunition Solar Cover testing, prepare performance specification and prepare LRIP contract.
■	300	Complete testing and field evaluation of the LME and prepare for MS III/production decision.
■	48	Small Business Innovative Research/Small Business Technology Transfer Programs.

<p>A. <u>Mission Description and Justification:</u> The project funds the development of Joint Service Food/Food Service Equipment to improve individual combat effectiveness and reduce logistics burden and operation & support (O&S) costs of subsistence support for service personnel. Enhance rations by increasing quality, acceptability and variety. Develop multi-fuel, rapidly deployable field food service equipment to support combat, humanitarian missions and operations-other-than-war. Improve equipment to enhance safety in food service, utilize battlefield fuel and decrease fuel and water requirements. Program is reviewed and validated twice annually by the Department of Defense (DoD) Food and Nutrition Research and Engineering Board as part of the Joint Service Food Program. Additionally, the project will, conduct advanced development of improved subsistence and subsistence support items to enhance soldier effectiveness and quality of life in all four Services as part of an integrated DoD Food Research, Development, Test, Evaluation and Engineering (RDTE&E) program.</p> <p><u>Acquisition Strategy:</u> Developments transition to Engineering and Manufacturing Development and procurement.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; vertical-align: top;">■</td> <td style="width: 5%; text-align: right; vertical-align: top;">200</td> <td style="vertical-align: top;">Completed study on electronic recipe distribution, modified existing program for Lotus Notes application and started transmission of new and approved recipe database file to the Services.</td> </tr> <tr> <td style="vertical-align: top;">■</td> <td style="text-align: right; vertical-align: top;">610</td> <td style="vertical-align: top;">Completed field test of new MRE components and obtained OTSG and JSORF approval for fielding; completed testing and transitioned Ration Snack Pack for procurement in emergency contingencies; completed field testing of 12 Meal Cold Weather menu designs and received approval for transitioning to procurement; transitioned procurement documents for medical supplement to the Unitized Group Ration (UGR) to DLA.</td> </tr> <tr> <td style="vertical-align: top;">■</td> <td style="text-align: right; vertical-align: top;">263</td> <td style="vertical-align: top;">Completed development of four MRE ration prototypes to reduce cost, weight and volume and logistical impact on supply system.</td> </tr> <tr> <td style="vertical-align: top;">■</td> <td style="text-align: right; vertical-align: top;">160</td> <td style="vertical-align: top;">Developed five new types of Mobility Enhancing Ration Components (MERCs) and commercially produced test components for field evaluation with operational forces. Obtained approval for two Cooperative Research and Development Agreements (CRADAs) for technology transfer.	■	171	Performed technical feasibility testing (TFT) on NDI waste reduction/handling equipment which will reduce the field back-haul and trash removal requirements and transitioned optimum system to procurement.	■	385	Initiated design and fabrication of Marine Corps Rapid Deployment Kitchen (RDK) based on centralized heating technology providing highly mobile, efficient field feeding capability.	■	60	Evaluated Thermally Efficient Field Serving Equipment to optimize food quality and transitioned procurement documentation to Marine Corps.	Total	1849	
■	200	Completed study on electronic recipe distribution, modified existing program for Lotus Notes application and started transmission of new and approved recipe database file to the Services.																															
■	610	Completed field test of new MRE components and obtained OTSG and JSORF approval for fielding; completed testing and transitioned Ration Snack Pack for procurement in emergency contingencies; completed field testing of 12 Meal Cold Weather menu designs and received approval for transitioning to procurement; transitioned procurement documents for medical supplement to the Unitized Group Ration (UGR) to DLA.																															
■	263	Completed development of four MRE ration prototypes to reduce cost, weight and volume and logistical impact on supply system.																															
■	160	Developed five new types of Mobility Enhancing Ration Components (MERCs) and commercially produced test components for field evaluation with operational forces. Obtained approval for two Cooperative Research and Development Agreements (CRADAs) for technology transfer.																															
■	171	Performed technical feasibility testing (TFT) on NDI waste reduction/handling equipment which will reduce the field back-haul and trash removal requirements and transitioned optimum system to procurement.																															
■	385	Initiated design and fabrication of Marine Corps Rapid Deployment Kitchen (RDK) based on centralized heating technology providing highly mobile, efficient field feeding capability.																															
■	60	Evaluated Thermally Efficient Field Serving Equipment to optimize food quality and transitioned procurement documentation to Marine Corps.																															
Total	1849

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE February 1998
BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603747A Soldier Support and Survivability	PROJECT D610
FY 1998 Planned Program:		
■	298	Fabricate Non-Electric Field Refrigerator prototype, conduct technical user testing and develop performance specification for procurement.
■	536	Complete fabrication and initiate test and evaluation of the Rapid Deployment Kitchen (RDK).
■	229	Complete test and evaluation of future shipboard galley concept incorporating new food service equipment technologies.
■	360	Identify and conduct user testing of improvements for individual and group ration systems to improve acceptability and enhance combat effectiveness. Transition selected heat and serve ration components and MRE improvements, increasing menu variety. Update B-ration menu for Marine Corps.
■	327	Field test MERC to quantify warfighter acceptability / mobility enhancement and transition to procurement for use in MRE menus.
■	214	Field test nutrient optimized MRE ration prototypes to minimize weight/cube/cost and conduct user field test to determine effect on level of acceptance and consumption.
■	87	Procure and conduct technical testing of steam generator to provide immediate enhancement to existing Field Sanitation Systems.
■	87	Initiate Fielded Food Service Equipment Improvement Program.
■	55	Small Business Innovative Research/Small Business Technology Transfer Programs.
Total	2193	
FY 1999 Planned Program:		
■	280	Fabricate prototype Marine Corps Expeditionary Field Feeding Delivery System, conduct field evaluations and transfer procurement documents.
■	260	Design and fabricate the Catalytic Diesel Vaporizer for specific application to effectively integrate with commercial off the shelf food service equipment.
■	240	Develop company-sized kitchen and fabricate prototype of the Kitchen, Company Level Field Feeding - Future.
■	200	Complete storage studies/demonstrations of glass coated polymeric tray with easy open lid to refine concepts, ensure high acceptability and optimize functionality and affordability.
■	380	Continue to identify and conduct user testing of improvements for individual and group ration systems. Transition selected heat and serve ration components and MRE improvements, increasing menu variety and acceptance.
■	255	Complete field tests in different environments to establish effectiveness of selected performance enhancing ration components (PERCs) and supplements, demonstrate overall producibility and suitability of PERCs-based rations and transition to procurement.
■	369	Complete MRE ration redesign for nutritional optimization and logistical parameters and conduct follow-up field testing to demonstrate improved acceptance/consumption and reduced logistic burden.
■	250	Evaluate emerging food service equipment technology for direct shipboard application to reduce life cycle costs.
■	220	Develop a baseline on which to design future "on demand" feeding systems to reduce logistical burden.
■	128	Continue executing fielded food service equipment improvement program

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603766A Tactical Exploitation of National Capabilities (TENCAP) - Demonstration/Validation (TIARA)				PROJECT D907	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D907 Tactical Exploitation of National Capabilities - Adv Dev	24714	19566	0	0	0	0	0	0	0
<p>A. Mission Description and Budget Item Justification: Supports the tactical commander's intelligence requirements for contingency force development and deep battle targeting as stated in Field Manual 100-5. Specific developments are managed within the Army's Tactical Exploitation of National Capabilities (TENCAP) program. The scope of the program is to leverage specific data and capabilities available from existing and emerging National and selected theater capabilities that meet stated Army tactical intelligence information and targeting needs to correct deficiencies, and develop concepts, techniques and prototype processors to exploit critical data for near-real time integration into the appropriate tactical echelon. This project supports the advanced development/enhancement of the Mobile Integrated Tactical Terminal (MITT), Forward Area Support Terminal (FAST), Tactical Exploitation System (TES), and Advanced Electronic Processing and Dissemination System (AEPDS). The Army's emerging TES will incorporate the standards and protocols dictated by the Common Imagery Ground Surface System (CIGSS) program. TES brings all of the existing and emerging Army TENCAP capabilities [AEPDS, Modernized Imagery Exploitation System (MIES), and Enhanced Tactical Radar Correlator (ETRAC)] into an integrated common baseline; downsized modular and scaleable to meet a wide range of contingency requirements. TENCAP Common Baseline addresses common subsystems, planned improvements, key activities and ongoing/planned initiatives determined to have potential application to multiple TENCAP systems, including MIES and ETRAC that are funded under the Defense Airborne Reconnaissance Program (DARP) (PE 0305154D). Specific details are provided in the Tactical Intelligence and Related Activities (TIARA) Congressional Justification Book, Volume II, and in the Army TENCAP Master Plan. This Program Element (PE) focuses on efforts associated with advanced technology development used to demonstrate general military utility to include demonstration and validation in the area of TENCAP and is correctly placed in Budget Activity 4.</p> <p>Acquisition Strategy: As pioneers in rapid acquisition, ASPO's success in delivering systems as those described above to warfighters can be directly attributed to an environment emphasizing stable funding, low density acquisition, minimal use of MILSPECS, and managed competition. By tailoring existing technology, leveraging the best commercial practices, and using commercial and government off the shelf software, the Army Space Program Office (ASPO) minimizes risk while maximizing efficiency. Strong user involvement, a robust operations and maintenance program and a vigorous technology insertion effort ensure programmatic success. Finally, dedicated cradle to grave Integrated Logistics Support (ILS) for TENCAP systems is accomplished through a coordinated effort by government and contractor personnel and facilities.</p>

PROJECT D907		

A. <u>Project Cost Breakdown</u>	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
Common Baseline (*1)	8054	4731	0
TES	10027	9371	0
ASPO In-House (*2, *3)	2765	2389	0
FFRDC	0	97	0
System Engineering (Contractor) (*2)	2668	1486	0
System Engineering (Government) (*2)	1200	1034	0
SBIR/STTR		458	
Total	24714	19566	0

(*1) TENCAP Common Baseline addresses common subsystems, planned improvements, key activities and ongoing/planned initiatives determined to have potential application to multiple TENCAP systems [including MIES and ETRAC that are funded under the DARP (PE 0305154D)].

(*2) Approximately 40% of program management cost in FY 1997 through FY 1998 support efforts being developed under PE 0305154D.P531 and PE 0305308D.PD8Z.

(*3) The ASPO In-House support in this project also supports efforts being developed under PE 0604766A.D909.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998		
BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603774A Night Vision Systems - Advanced Development				PROJECT D131	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D131 Night Vision Systems Advanced Development	2254	2848	2681	3015	3779	4568	4488	Continuing	Continuing
<p>A. <u>Mission Description and Justification</u> This project encompasses the advanced development phase of the Army acquisition cycle for Night Vision and Electro-Optic (NVEO) devices/systems and prepares them for engineering development. The key objective of this program is to provide NVEO devices/systems for acquisition and engagement of enemy targets at maximum weapon system ranges under degraded battlefield/weather conditions and in countermeasure environments. This project provides the funding necessary to implement advances for product improvement or horizontal technology integration (HTI) to upgrade current capabilities in the future. The efforts are centered around development of countermeasure and electro-optic sensors for the individual soldiers and combat vehicles to meet stated Army deficiencies such as fratricide reduction. The focus of these efforts is on advanced technology development; therefore, this project is properly placed in Budget Activity 4.</p> <p><u>Acquisition Strategy:</u> The advances and improvements for Second Generation FLIR (SGF) utilize development contracts that were competitively awarded using best value source selection procedures.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 286 Completed support for Stingray participation in exercises. ■ 255 Qualified SADA II Second Source. ■ 1713 Developed advanced SGF "B" kit features (e.g., frame integration, extended range performance and laser protection) for M2A3, M3A3, M1A2 SEP and LRAS3. <p>Total 2254</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 1098 Develop additional Laser Protection for SGF HTI ground "B" Kit to be integrated into M2A3, M3A3, M1A2 SEP, and LRAS3. ■ 580 Integrate and demonstrate sight level ground "B" kit advanced capabilities. ■ 798 Prepare and demonstrate improved detector capability for aviation systems. ■ 308 Evaluate of light weight multispectral sensor package at White Sands Missile Range (WSMR). ■ 64 Small Business Innovative Research/Small Business Technology Transfer Programs. <p>Total 2848</p>

<p>A. Mission Description and Budget Item Justification: This program implements the provisions of Title 10 U.S. Code, Section 2350a, Cooperative Research and Development (R&D) Projects: Allied Countries. The objective is to improve, through the application of emerging technologies, the conventional defense capabilities of the United States, the North Atlantic Treaty Organization (NATO), and U.S. major non-NATO allies. This program element only funds the U.S. equitable share of the cooperative R&D project spent in the U.S. Projects are implemented with the allied partners through international agreements which define the scope, cost and work sharing arrangements, management, contracting, security, data protection and third party transfers. By technology sharing the program jointly develops equipment with our allies to improve operational efforts by achieving multi-national force compatibility through the use of similar equipment and improved interfaces. Funds support all the R&D costs including the identification of cooperative opportunities and administration of the program. All funds are used to pay for the U.S. work share in the United States at U.S. Government and U.S. contractor's facilities. This program focuses on international cooperative technology demonstration, validation, and interoperability of the Battlefield Combat Identification System, Force XXI Battle Command Brigade & Below (FBCB2)/Appliqué Systems, Adaptive Digital Beamforming for THAAD radars, helicopter helmet mounted displays, military network switching, PATRIOT Tactical Operations Center, improved combat vehicle propulsion, missile seeker electronic countermeasures, eyesafe laser radar, artillery command and control, standoff chemical detectors, kinetic energy penetrators, signal jamming subsystems, and is therefore correctly placed in Budget Activity 4. The final program will be reported separately as required by 10 USC 2350a(f).</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none">  2877 Combat Identification (CI) Interoperability Demonstration (Partners: France, Germany, United Kingdom): Integrated the Battlefield Combat Identification System (BCIS) on armored vehicles, completed interoperability trials with FR, GE, and UK prototype systems in Munster, GE.  2005 Battlefield Command and Control (C2) Systems Interoperability (Partner: Germany): Implemented, tested and evaluated message exchange through the Intelligent Translation Gateway, over the Defense Simulation Internet and the Digital Interface Lab in a simulated Operational Test.  1500 Adaptive Beamforming Technology (ABFT) for Wide Band Phased Array Radars (Partner: United Kingdom): Improved detection in severe Electronic CM environments. Extended narrowband ABFT to THAAD radar, developed ABFT architectures and assessed design trade-offs.  1200 Covert Night/Day Operations in Rotorcraft (CONDOR) (Partner: United Kingdom): Improved helicopter helmet mount display and flight controls. Fabricated Advanced Visionics System (AVS) and Advanced Flight Control System (AFCS) prototypes, system integration and flight tests.  1050 Fighting Vehicle Propulsion Technology Using Ceramic Materials (Partner: Japan): Developed, tested and characterized advance materials, including ceramics, high temperature combustion optimization, low heat rejection technology, and advanced friction and wear phenomena that provides a breakthrough in fighting vehicle diesel engine designs. Objective is to double combat propulsion system power density and fuel economy.  405 High Technology Switch (Partner: France): Developed advanced interoperable Asynchronous Transfer Mode (ATM) switches for ATM communications field tests, military networks and test beds, Digital Interoperability Lab (DIL) and Battlefield Information Transition System (BITS).

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603790A NATO Research & Development	PROJECT D691
FY 1998 Planned Program: (continued)		
■ 198	Low Level Air Picture Interface (LLAPI) (Partners: Canada, Germany, France, Netherlands, United Kingdom): Develop automated interfaces between US and Allied short range air defenses for radar data exchange and demonstrate systems interoperability.	
■ 236	TACJAM-A Electronic Support Subsystem Upgrades (Partner: United Kingdom): Develop and integrate technology enhancements to current jamming subsystems used on vehicles and aircraft that detect modern signal transmissions.	
■ 132	Next- Generation Autonomous Vehicle Navigation Control System (AUTOVAV) (Partner: Germany): Initiate design and development of an advanced autonomous vehicle navigation control system. Complete sub-system tests of obstacle detection, classification, and avoidance technologies.	
■ 300	Report To Congress: Pursuant to 10 USC 2350a, prepare and provide to USD(A&T) the Army section of the 1998 Report to Congress on the International Cooperative Research and Development Program	
■ 223	Small Business Innovative Research/Small Business Technology Transfer Program	
Total	8866	
FY 1999 Planned Program:		
■ 1200	Command and Control (C2) Systems Interoperability Program (C2SIP) (Partners: Germany, France, United Kingdom): Integrate work from Battlefield Interoperability Program (BIP), Quadrilateral Interoperability Program (QIP), and the Army Tactical Command & Control Information System (ATCCIS) into an Advance Technology Demonstration (ATD) to achieve NATO levels 4 (messaging) & 5 (database) interoperability.	
■ 2350	Fighting Vehicle Propulsion Technology using Ceramic Materials (Partner: Japan): Continue to develop, test and characterize advance materials including ceramics, high temperature combustion optimization, low heat rejection technology, and advanced friction and wear phenomena.	
■ 1000	Focal Plane Array Countermeasures (FPACM) (Partner: United Kingdom): Characterize and assess advanced focal plane array missile seekers and develop electronic countermeasures (ECM) to defeat them through simulation, modeling and lab testing.	
■ 1000	Cooperative Eyesafe Laser Project (CELRAP) (Partner: Japan): Continue to develop a joint performance specification for a multifunctional, eyesafe laser radar for range finding, target profiling, obstacle avoidance, range and terrain mapping. Fabricate subsystems and brassboard.	
■ 1000	Next- Generation Autonomous Vehicle Navigation Control System (AUTOVAV) (Partner: Germany): Initiate design and development of an advanced autonomous vehicle navigation control system. Complete sub-system tests of obstacle detection, classification, and avoidance technologies.	
■ 1000	TACJAM-A Electronic Support Subsystem Upgrades (Partner: United Kingdom): Develop and integrate technology enhancements to current jamming subsystems used on vehicles and aircraft that detect modern signal transmissions.	
■ 850	Advance Penetrator Development in Tank Munitions (Partner: United Kingdom): Develop an advanced penetrator, and potentially a common cartridge, to defeat modern tanks equipped with Kinetic Energy - Explosively Reactive Armor.	
■ 830	Artillery System Cooperation Activities (ASCA) (Partners: France, Germany, United Kingdom): Develop common interface requirements for Allied Field Artillery Command and Control Systems and conduct a field demonstration for interoperability between AFATDS and Allies' systems.	
■ 800	Laser Stand-off Chemical Detector (LSCD) (Partner: France): Develop technology that will allow U.S. troops to detect, identify, and quantify chemical agents from a distance by employment of the preferred doctrine of contamination avoidance.

Mission Description and Budget Item Justification: This PE provides advanced development aviation support of tactical programs associated with air mobility, advanced maintenance concepts and equipment, and Aircrew Integrated Systems (ACIS), formerly Aviation Life Support Equipment (ALSE). The projects in this Program Element supports research efforts in the advanced development phase of the acquisition strategy and are correctly placed in Budget Activity 4.

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603801A Aviation - Advanced Development				PROJECT DB32	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DB32 Advanced Maintenance Concepts and Equipment	2126	2574	2612	3059	3114	3523	3656	Continuing	Continuing
<p>A. Mission Description and Justification: This project enhances utilization of current and future aircraft by improving the efficiency of maintenance (primarily in the area of diagnostics/prognostics) and servicing operations by validating new maintenance concepts to improve man machine interface, enhancing aircraft maintenance procedures and reducing operating and support costs. Included in the project are Digitized Aviation Logistics (DAL) elements such as: Portable Maintenance Aids (PMA), database management software, on-board diagnostics, digital source collector, health/usage monitoring system, trending analysis, and support infrastructure.</p> <p>Acquisition Strategy: This project is an aggregate of advanced maintenance concepts-related projects. While the detailed acquisition strategy varies from project to project, the general strategy for each individual project is to complete the development effort through Government test (developmental and operational). Program documentation for milestone decision is prepared, as appropriate, concurrently with the development effort in preparation for program transition to the organization responsible for production and fielding.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 940 Began development of portable maintenance tools designed to utilize a CATEA data in the diagnosis and repair of aircraft systems; in addition, tools that support flexible scheduling of phased maintenance and tools that integrate the aircrew as part of the diagnostic and troubleshooting procedure. 1186 Finalized an infrastructure definition to support a digitized aviation logistics concept beginning at the aircraft through to the higher headquarters and the sustainment base. Total 2126 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 574 Conduct the critical design review and complete prototype build and demonstration of the advanced maintenance software tools to be hosted on a Portable Maintenance Aid. These tools include the application of digitized drawings, flexible maintenance scheduling and integration aircrew information in the diagnostic process. 550 Engineer and assembly a portable wireless maintenance data network suitable for use in the "shadow of aircraft". The system will have application at the AVUM/AVIM to support and facilitate communication in the maintenance environment. The system will enhance the trouble shooting and repair of aircraft and improve overall logistics at the flight line. 290 Conduct a best-fit determination effort for health usage and monitoring functions on the Army helicopter fleet. The modeling analysis will yield the maximum cost benefit technology suite for the specific aircraft. 1099 Start evolutionary prototype effort to demonstrate portions of the digital logistics system in order to support unit maintenance. This demonstration will work out interface requirements for the different elements supporting aviation. 61 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs

FY 1999 Planned Program:

■ 225 Complete the final design and analysis of the optimum cost benefit health usage and monitoring suite as it applies to the individual force modernized helicopters.

■ 525 Demonstrate the planeside wireless maintenance data and communications network and evaluate its influence on improving helicopter support in the specific areas of maintenance troubleshooting and its ability to assist in streamlining aircraft logistics.

■ 1487 Continue to grow the prototype logistics system by implementing digital technologies throughout the infrastructure. This will demonstrate improved support processes designed to reduce life cycle costs.

■ 375 Plan and execute a demonstration to implement advanced maintenance software tools.

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603801A Aviation - Advanced Development				PROJECT DB33	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DB33 Cargo Handling and Mission Support Equipment	1857	1872	2403	2813	2879	3057	3276	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: This project develops equipment, practices, and procedures for the operational improvement of planning, loading, transport, and off-loading of helicopter cargo in all-weather, around the clock combat scenarios. It also replaces obsolete and insupportable ground support equipment with new and standardized multi-output equipment compatible with all Army aircraft models; develops rapid battle repair procedures and tools to speed the return of aircraft to combat ready status; and develops new equipment for aerial recovery of damaged aircraft.</p> <p>Acquisition Strategy: This program is an aggregate of advanced mission support and cargo handling concepts-related projects. While the acquisition strategy varies from project to project, the general strategy is for each project to complete the development effort through Government test (developmental and operational). Program documentation for milestone decisions is prepared, as appropriate, concurrently with the development effort in preparation for program transition to the organization responsible for production and fielding. Programs are executed in coordination with the user and the gaining organization.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 684 Completed the demonstration of advanced internal and external cargo handling systems. 69 Conducted an aircraft cleaning and de-icing system NDI evaluation. 403 Completed knowledge based NDI/NDT inspection and repair procedures for composite components. 261 Continued development of an electronic turbine engine diagnostic system for T-700 engine as part of an overall integrated portable engine test set as part of an overall integrated portable engine test set program. 440 Initiated portable engine test set diagnostic logic database development for entire force modernization aviation fleet that will handle both the aircraft interface as well as the engine itself Total 1857 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 134 Develop portable multimode electric power source for use in aviation contact maintenance operations 938 Continue development of portable engine test diagnostic logic database for force modernization aviation fleet. 122 Initiate development of Aviation Ground Power Unit (AGPU) replacement that meets emerging requirements for the force modernization aviation fleet. 67 Investigate development of advanced external cargo nets that are capable of being retained by the lift aircraft after cargo drop off. 26 Initiate development of next generation general mechanics toolboxes 134 Initiate development of prototype aircraft cleaning system that meets environmental wastewater requirements.

67 Investigate environmentally NDI approaches for aircraft deicing.

FY 1998 Planned Program: (continued)

201 Initiate development of field-hardened NDI/NDT hardware and neural network software that meets all joint service requirements.

136 Initiate development of advanced cargo handling technologies in the areas of remote external cargo monitoring, advanced external cargo winches, internal aircraft communications, and automated weight and balance sensors.

47 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs

Total 1872

FY 1999 Planned Program:

734 Initiate development of objective portable engine diagnostic system for force modernization aviation fleet.

534 Continue development AGPU replacement through preliminary design.

160 Complete development of advanced cargo nets, next generation toolboxes and aircraft deicing system.

200 Continue development of NDI/NDT system through preliminary design

266 Continue development of advanced cargo handling technologies through preliminary design.

243 Initiate development of hidden corrosion detection, prevention and treatment technologies.

266 Continue development of aircraft cleaning system through detail design and hardware fabrication.

Total 2403

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost															
DB45 Aircrew Integrated Systems	6665	9250	2472	0	0	2856	2887	Continuing	Continuing															
<p>A. Mission Description and Budget Item Justification: Project DB45 - Aircrew Integrated Systems (ACIS) - formerly Aviation Life Support Equipment (ALSE) Advanced Development: This project provides advanced development for those systems and items of equipment that are unique and necessary to the sustainment and enhanced survivability of Army aircrews and passengers on the future integrated battlefield and during related training activities. Advanced development programs will focus on the development and evaluation of emerging technologies and the adaptation of commercial and nondevelopmental items (NDI) to military requirements. The Cockpit Air Bag System (CABS) effort has evaluated a variety of supplemental restraint system approaches to improve crew and passenger crash survivability and thereby reduce potential injuries/casualties on UH-60 and SH-60 aircraft; complementing the AH-64 Cockpit Air Bags System Engineering, Manufacturing, and Development (EMD) program, with follow-on adaptation to the OH-58D and CH-47D aircraft. The CABS project transitioned into the EMD life cycle phase during FY 96. The Air Warrior (AW) program will provide the aircrew with a systems approach to chemical and biological (CB) protection, noise protection, microclimatic conditioning, crash and post-crash survivability, concealment and environmental protection, ballistic protection, night vision capability, heads-up displays, nuclear flash protection, directed energy eye protection, and flame/heat protection. The AW design will improve overall aircrew mission performance, aircrew comfort, aircrew and aircrew station interface, safety, and survivability. The Aircrew Integrated Common Helmet (AICH) program, an Air Warrior component, is the major information management, control, and aircraft interface for the aviator. The AICH incorporates Comanche electronics as an Aircraft Retained Unit (ARU) utilizing new flat panel displays on the latest, most advanced Pilot Retained Unit (PRU), the HGU-56/P helmet. Improved Noise Reduction and Speech Intelligibility technology is being developed in concert with the AICH program. None of these efforts duplicate any aircraft program efforts. Both joint and service independent efforts will be pursued under the scope of this project.</p> <p>Acquisition Strategy: DB45 - Two Air Warrior Program Definition and Risk Reduction (PDRR) development contracts will be awarded in FY 97 to separate competing teams. At Milestone II, there will be a down selection of one team for a combined PDRR and EMD phase.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%;"></td> <td style="width: 10%; text-align: right;">6665</td> <td>Initiated Air Warrior Program Definition and Risk Reduction contractor effort and continued incorporation of AICH, Improved Noise Reduction and Speech Intelligibility technology, and NBC effort</td> </tr> <tr> <td colspan="2">Total</td> <td style="text-align: right;">6665</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%;"></td> <td style="width: 10%; text-align: right;">9027</td> <td>Continue Air Warrior Program Definition and Risk Reduction (PDRR), and flight test of AICH miniature flat panel displays</td> </tr> <tr> <td style="width: 5%;"></td> <td style="width: 10%; text-align: right;">223</td> <td>Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs</td> </tr> <tr> <td colspan="2">Total</td> <td style="text-align: right;">9250</td> </tr> </table>											6665	Initiated Air Warrior Program Definition and Risk Reduction contractor effort and continued incorporation of AICH, Improved Noise Reduction and Speech Intelligibility technology, and NBC effort	Total		6665		9027	Continue Air Warrior Program Definition and Risk Reduction (PDRR), and flight test of AICH miniature flat panel displays		223	Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs	Total		9250

Mission Description and Budget Item Justification: This program supports advanced development of new and improved technologies for combat support and combat service support equipment essential to sustaining combat operations. Advancements in airdrop, rigid wall shelters, marine craft, bridging, electric power generators and batteries, potable water, environmental control and petroleum equipment are necessary to improve safety and increase the tactical mobility, operational capability, lethality and survivability on the digital battlefield of the first to fight; and to provide for greater sustainment of all combat forces while reducing the logistics support burden. The projects in this Program Element focus on efforts to demonstrate general military utility, to include demonstration and validation and are therefore correctly placed in Budget Activity 4.

<p>A. <u>Mission Description and Justification</u> This program develops advanced tactical power sources to improve soldier mobility, sustainability, and survivability. This is the only project that bridges the gap between science and technology and full scale production of new higher energy density, lower cost, all-weather batteries/energy conversion systems to satisfy the unique tactical and logistical requirements of portable electronic battlefield equipment. This effort also includes state-of-art measuring and indicating circuitry as well as safety protection circuitry. Superior battery charging and analyzing equipment required to meet unique requirements are also included.</p> <p><u>Acquisition Strategy:</u> Transition to production</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 37 Conducted field test and evaluation of next generation of primary lithium-based batteries. ■ 50 Began development of high power battery chemistry with no toxic/hazardous materials. ■ 42 Developed High Energy/High Power throw away battery for Force XXI Soldier. <p>Total 129</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 104 Develop cost effective, lightweight Lithium Ion rechargeable polymer battery for Force XXI Soldier and standard Army configurations.. ■ 27 Test and evaluate proof of principle prototype polymer batteries. <p>Total 131</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> ■ 139 Design and develop conformal battery packaging for Standard Family of Rechargeable Lithium Batteries. ■ 40 Conduct field tests and prepare specifications for thin, conformal rechargeable battery family. <p>Total 179</p> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/FY 1999 President's Budget</td> <td style="text-align: center;">129</td> <td style="text-align: center;">135</td> <td style="text-align: center;">172</td> </tr> <tr> <td>Appropriated Value</td> <td style="text-align: center;">129</td> <td style="text-align: center;">135</td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td></td> <td style="text-align: center;">-4</td> <td></td> </tr> <tr> <td>FY 1999 Pres Bud Request</td> <td style="text-align: center;">129</td> <td style="text-align: center;">131</td> <td style="text-align: center;">179</td> </tr> </tbody> </table> <p>Project DG10</p>											<u>FY1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	FY 1998/FY 1999 President's Budget	129	135	172	Appropriated Value	129	135		Adjustments to Appropriated Value		-4		FY 1999 Pres Bud Request	129	131	179

<p>A. <u>Mission Description and Justification:</u> The most significant effort in FY 99 provides funds for the Army share of the Joint Lighterage and Causeway Program. This program, managed jointly with the Navy, will improve Cargo Offload speed under normal sea states and allow for successful offload under challenging sea state conditions. These efforts will significantly improve Field Command operational capability and flexibility. Funds will permit efforts to develop joint plans and materiel in conjunction with the Navy and Marines, truly integrating Logistics Over The Shore (LOTS) capabilities. Project funds will also serve to support conceptual development of the Rapidly Installed Breakwater (RIB). This project will also assist the Army to conduct LOTS exercises under adverse Sea State conditions. Together, these efforts will extend capabilities of the joint Army/Navy LOTS program, and allow the Army to proceed with deployment of forces under less than ideal sea and weather conditions.</p> <p><u>Acquisition Strategy:</u> RDTE followed by competitive procurement.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%;"></td> <td style="width: 10%; text-align: right;">1883</td> <td style="width: 80%;">Conceptual Development of the Rapidly Installed Breakwater (RIB).</td> </tr> <tr> <td></td> <td style="text-align: right;">9100</td> <td>Joint Program with Navy to develop Sea State 3 Capable Causeways/Lighterage.</td> </tr> <tr> <td>Total</td> <td style="text-align: right;">10983</td> <td></td> </tr> </table> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 40%;"></th> <th style="width: 20%; text-align: center;"><u>FY 1997</u></th> <th style="width: 20%; text-align: center;"><u>FY 1998</u></th> <th style="width: 20%; text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">330</td> </tr> <tr> <td>Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Adjustment to Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">10983</td> </tr> </tbody> </table> <p>Change Summary Explanation: Funding – FY 99 increased (+10653) due to high priority requirements.</p>											1883	Conceptual Development of the Rapidly Installed Breakwater (RIB).		9100	Joint Program with Navy to develop Sea State 3 Capable Causeways/Lighterage. *FY 97 database contains an administrative error. Funding shown here is correct.

Mission Description and Budget Item Justification: Project D091: The Combat Service Support Control System, is a computer software system designed to assist the Combat Service Support (CSS) Commander and his staff to rapidly collect, store, analyze, and disseminate CSS information to support the functions of command, control and resource management. CSS control centers must provide a rapid decision support capability and supportive information to commanders more quickly than is possible with the present manual systems. This program develops the CSS battlefield functional area (BFA) node of the Army Tactical Command and Control System (ATCCS) which is a component of the Army Battle Command System (ABCS). Project D246, Tactical Communications System - Advanced Development, provides for insertion of proven communications technology from program element 0602782A, Project AH92 exploratory development into advanced development. Examples of these potential programs are the Multiband, Multimode Radio, high power solid state amplifiers and couplers, and packet appliques used to increase network efficiency. These efforts provide for the demonstration and validation of advanced technologies and are therefore appropriately funded in Budget Activity 4.

<p>A. <u>Mission Description and Justification:</u> Project D091, Combat Service Support Control System The CSSCS is a computer software system designed to assist the CSS Commander and his staff to rapidly collect, store, analyze, and disseminate CSS information to support the functions of command, control and resource management. CSS control centers must provide a rapid decision support capability and supportive information to commanders more quickly than is possible with the present manual systems. This program develops the CSS BFA node of the ATCCS, which is a component of the ABCS.</p> <p><u>Acquisition Strategy:</u> Acquisition strategy is to pursue an evolutionary development process, with program development structured to evolve over five versions. Versions 1 and 2 served as proof of principle, and provided initial division level CSS functional capability on common hardware. Version 3 built on the capabilities of the previous versions and provides an Initial Operational Capability at Division and Corps level, to include initial horizontal interoperability with ABCS systems. Version 4 extends CSSCS to EAC, as well as provide added capabilities at Echelons Corps and Below (ECB). Version 5, the objective CSSCS software, will provide remaining ECB functionality, and extend CSSCS capabilities to joint, allied and coalition forces. TRW is the software development contractor. Lockheed Martin Corporation (LMC) provides training support. Hardware is procured from the Common Hardware/Software-2 (CHS-2) contract with GTE.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> █ 1000 Concluded IOTE-II █ 5542 Completed Version 3 software development █ 1537 Continued Version 4 Software development █ 1200 Prepared for and conducted Army Warfighting Experiments (AWE), Task Force XXI and Division XXI activities. █ 800 Prepared documentation and conducted ASARC III (Full Scale Production (FSP) █ 533 Began fielding of Version 3 Total 10612 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> █ 3874 Complete Version 4 development █ 700 Conduct Version 4 Technical Test. █ 920 Prepare for and conduct Army Warfighting Experiments (AWE), Division XXI and Force XXI activities █ 141 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR) Total 5635

<p>A. <u>Mission Description and Budget Item Justification</u> This project will validate the new Tactical Internet capability required for Force XXI. It provides definition, integration and testing of a mix of mature and prototype products which will be used to develop a Tactical Internet capability. The Tactical Internet will be the primary data communications infrastructure at Corps and below for Force XXI and will revolve around interconnecting a mix of existing (e.g.: SINCGARS, SINCGARS SIP, EPLRS, MSE TPN, ETC) and emerging communications devices using gateways and routers. Gateways will also provide the link to Strategic levels. This capability will result in the tactical equivalent of the Information Highway and will support key battlefield functional areas to include logistics reporting, telemedicine, etc. The Tactical Internet will use and leverage commercial network standards and products. The "Internet Protocol" (IP) suite will be used to provide seamless communications with the capability to dynamically route data to hosts. It will be designed to facilitate technology insertion. The focus of this project will be to reduce the technical risk by assembling, integrating, and testing the Tactical Internet components prior to TF XXI, Division XXI, and Corps XXI. New services and components will be added and tested as required for each iteration leading up to Force XXI.</p> <p><u>Acquisition Strategy:</u> Not applicable.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 431 Provided on-site tactical internet technical support at Ft Hood and Ft Irwin for TFXXI 582 Expanded the testbed to 35 nodes and installed the latest SINCGARS, EPLRS, Internet Controller, Applique software revisions for tactical internet testing 250 Developed and provided empirical test data for validation of the System Performance Model. Provided laboratory testing of EPLRS and NTDR for DIVXXI Demonstrated the transfer of countermines messages over the Tactical Internet; transferred Tactical Internet messages over SPITFIRE UHF satellite radios for range extension 104 Incorporate latest DBC/BITS products including HF radios 500 Expanded Tactical Internet efforts to begin examining the vulnerabilities (C2 Protect for Information Operations) inherent in commercial protocols and products. Identified protection techniques <p>Total 1867</p>

PROJECT

D246**FY 1998 Planned Program:**

■	335	Resolve technical issues identified during the TF XXI and DIV XXI Exercises
■	570	Insert latest products and expand the testbed to address requirements for Corps size networks
■	203	Develop and provide empirical test data for the Corps XXI Exercise
■	80	Incorporate latest DBC/BITS Products
■	416	Perform lab feasibility studies of candidate video equipment, procure state-of-the-art video equipment for demo in an airborne platform. Incorporate NTDR on an airborne platform to demo networking, high throughput and automatic relaying capabilities using new video equipment
■	41	Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)
Total	1645	

FY 1999 Planned Program:

■	468	Resolve technical issues identified during the Corps exercise
■	700	Optimize technical solutions for Force XXI fieldings
■	159	Incorporate final set of DBC/BITS products
■	468	Demonstrate advanced networking capabilities by incorporating the NTDR on an airborne platform
Total	1795

Mission Description and Budget Item Justification: This program element (PE) funds the Advanced Development (AD) of medical materiel necessary to field an effective capability for infectious diseases. The PE funds AD of systems for medical protection against naturally occurring diseases and Human Immunodeficiency Virus (HIV). This includes development and initial human testing of vaccines, prophylactic and therapeutic drugs. Additionally, the PE supports AD of field medical equipment and drugs essential for combat casualty care on all battlefields and military operations other than war while reducing logistical support requirements. The PE also funds AD of systems that provide enhancement of or protection against physiological and psychological factors affecting cognitive and physical performance imposed by military systems, combat operations or the environment. This includes AD of vision corrective devices. Systems include resuscitators, blood substitutes, advanced sensors and diagnostic algorithms, field x-ray, field production of medical grade oxygen, intensive care delivery platforms and litters, and Advanced Surgical Suites for Trauma Care (ASSTC). This program is primarily managed by the U.S. Army Medical Research and Materiel Command. This PE focuses on efforts to demonstrate general military utility to include demonstration and validation in the area of medical materiel and is properly placed in Budget Activity 4.

<p>A. <u>Mission Description and Justification:</u> This project funds program definition and risk reduction of candidate medical countermeasures such as vaccines and drugs through safety, immunogenicity, and small-scale efficacy testing in volunteers against naturally occurring infectious diseases of mission-aborting potential. Work performed in laboratories and among troop populations is directed to prevention, diagnosis and treatment of viral, bacterial and parasitic disease to prevent casualties, sustain operational performance and minimize deaths and disability of armed forces during military operations. Some major contractors are Southern Research Institute, Birmingham AL; South Florida Research Institute, Miami, FL; Institute of Biology for the Army, Rio de Janeiro, Brazil; and Kenya Medical Research Institute, Nairobi, Kenya.</p> <p><u>Acquisition Strategy:</u> Test and evaluate in-house and commercially developed products in extensive government-managed clinical trials to gather data required for Food and Drug Administration licensure.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 2052 Completed expanded trials to evaluate safety and/or efficacy of antimalarial drugs WR238605 and Halofantrine. ■ 172 Completed Phase I safety trials on the Leishmania Skin Test Antigen. ■ 204 Began Phase II trials on Leishmaniasis Topical Treatment. ■ 1222 Completed Phase I/IIa safety/efficacy trials for RTS,S malaria vaccine. Total 3650 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 658 Begin expanded Phase IIb field trials with RTS,S malaria vaccine. ■ 113 Complete Phase II trials on Leishmaniasis Topical Treatment. ■ 128 Begin Phase II study on Leishmania Skin Test Antigen. ■ 306 Begin Phase I/II studies for <i>Shigella flexneri</i> vaccine. ■ 876 Complete Phase II efficacy studies for antimalarial drug WR238605. ■ 53 Small Business Innovative Research/Small Business Technology Transfer Programs. PROJECT

D808

FY 1999 Planned Program:

■	530	Initiate Phase I safety trials for a vaccine to protect against hemorrhagic fever with renal failure syndrome.
■	605	Complete Phase IIb field trials with RTS,S malaria vaccine.
■	165	Complete Phase I safety and immunogenicity trials for <i>Shigella sonnei</i> vaccine.
■	100	Complete Phase II efficacy study for Leishmania Skin Test Antigen.
■	250	Begin efficacy studies for antimalarial drug Desbutyl Halofantrine.
■	500	Begin Phase II studies for a Dengue Tetravalent vaccine.
■	200	Begin testing of a diagnostic kit for <i>Plasmodium falciparum</i> malaria.
■	864	Begin clinical studies for malaria vaccine, reduced immunization schedule.
■	250	Begin testing of insect repellent camouflage face paint.
■	250	Begin testing of artelinic acid for the treatment of malaria.
Total	3714

Mission Description and Budget Item Justification: This program element supports the Program Definition and Risk Reduction (PDRR) efforts for the Crusader - AD Program. The Crusader system is the Army's next generation artillery system consisting of a self propelled howitzer (SPH) and a resupply vehicle (RSV). Crusader will have significantly increased capabilities in the areas of lethality, mobility, survivability, resupply, command and control, and sustainability by capitalizing on emerging, advanced technologies. The SPH will also achieve increased lethality levels through independent operations. The RSV will have significantly increased capabilities in the areas of resupply, mobility and survivability and will provide a single source of ammunition, fuel, propellant and other supplies for the SPH. Beginning in FY1999, efforts previously funded in PE 0603640A, Project DB91, Artillery Propellant Development, will be funded within this program element. This program element focuses on efforts associated with the technology demonstration and validation of Crusader and is correctly placed in Budget Activity 4.

<p>A. <u>Mission Description and Justification:</u> This project supports the Program Definition and Risk Reduction (PDRR) efforts for the Crusader - AD Program. The Crusader system is the Army's next generation artillery system consisting of a self propelled howitzer (SPH) and a resupply vehicle (RSV). Crusader will have significantly increased capabilities in the areas of lethality, mobility, survivability, resupply, command and control, and sustainability by capitalizing on emerging, advanced technologies. The SPH will also achieve increased lethality levels through independent operations. The RSV will have significantly increased capabilities in the areas of resupply, mobility and survivability and will provide a single source of ammunition, fuel, propellant and other supplies for the SPH. Beginning in FY99, efforts previously funded in PE 0603640A, Project DB91, Artillery Propellant Development, will be funded within this project.</p> <p><u>Acquisition Strategy:</u> Not applicable</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 204685 Product development: Continued development efforts under the Crusader development Phases I & II contract; continued efforts in support of maturation, integration and risk reduction of critical technologies. Initiated component prototype fabrication and demonstration. ■ 22090 Support and management: Continued project management efforts, to include scientific and engineering analysis, product development team support, and engineering management services. ■ 2786 Test and evaluation: Purchased propellant, ammunition and fuzes required for the initiation of Engineering Development Testing (EDT)-A testing; began EDT-A testing. <p>Total 229561</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 277100 Product development: Continue development efforts under the Crusader development Phase II contract. Continue efforts in support of maturation, integration and risk reduction of critical technologies. Continue component prototype fabrication and demonstration. Conduct system level review. Conduct Phase I PEO/CMDT IPR. ■ 19507 Support and management: Continue project management efforts; to include scientific and engineering analysis, product development team support and engineering management services. ■ 7588 Test and evaluation: Purchase ammo for EDT and continue EDT-A testing. ■ 7824 Small Business Innovative Research/Small Business Technology Transfer Programs <p>Total 312019</p>

**0603854A Artillery Systems Advanced
Development**

PROJECT

D505**FY 1999 Planned Program:**

■ 274952 Product development: Continue developmental efforts under the Crusader development Phase II contract. Complete efforts in support of maturation and continue integration and risk reduction of critical technologies. Initiate long lead item buys. Initiate system prototype fabrication (Version I SPH/RSV). Initiate integration and checkout. Complete component fabrication and demonstration. Continue development of MACS for Type Classification.

■ 21521 Support and management: Continue project management efforts; to include scientific and engineering analysis, product development team support and engineering management services.

■ 14408 Test and evaluation: Continue EDT-A testing. Establish Cannon Interim Safety Fatigue Life. Initiate Safety Certification Activity.

Total 310881

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603856A SCAMP BLKII (SPACE)				PROJECT D389																			
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost																		
D389 SCAMP BLK II *	7701	71	7969	16568	35084	26823	24833	Continuing	Continuing																		
<p>* \$5.5M SCAMP BLK II Engineering Feasibility Effort(EFE) reported under 030342A.D386 in FY1996</p> <p>A. Mission Description and Budget Item Justification: Project D389 - SCAMP BLK II: The Single Channel Anti-Jam Manportable (SCAMP) BLK II Terminal will be a manpackable, satellite communications terminal to be employed by units that require range extension for command and control communications. Block II will be used by priority ground tactical users to transmit and receive intelligence, command and control traffic. It will transmit in the Extremely High Frequency (EHF) band and receive in the Super High Frequency (SHF) band. It will provide Low Data Rate (LDR) secure voice at 2400 bps and secure data at 75-2400 bps, as well as interface with Common Hardware/Software devices such as the Lightweight Computer Units and the Hand-Held Terminal Unit. The SCAMP BLK II will have embedded COMSEC, TRANSEC and GPS. The SCAMP BLK II will operate over MILSTAR, UFOE, as well as future AEHF satellites. The SCAMP BLK II will provide Advanced EHF capability such as increased data rates. It will operate in the transmit, receive or standby mode throughout an entire mission (typically 30 days). SCAMP BLK II EHF terminal will provide direct support to the tactical warfighter mobile forces with anti-jam protection, low probability of intercept, and low probability of detection. Engineering Feasibility Efforts (EFE) to develop the SCAMP BLK II in the range of 12-15 pounds was approved in the Acquisition Decision Memorandum. EFE began in FY96 and will continue through FY00. This project provides for the demonstration and validation of advanced technologies and is therefore appropriately funded in Budget Activity 4.</p> <p>Acquisition Strategy: SCAMP Block II will be a manpackable terminal in the 12-15 lb. range. SCAMP Block II began Engineering Feasibility Efforts (EFE) in FY96 placing emphasis on downsizing the following subsystems: Radio Frequency (RF) Generator, Digital Processor, Transmitter and Antenna. These subsystems will utilize technologies such as Millimeter Microwave Integrated Circuits (MIMIC), custom Very Large Scale Integrated Circuits (VLSIC) and increased efficiency power devices. EFE will conclude with the development and demonstrations of prototype BLK II SCAMP hardware leading to a Phase II spiral development with industry partnering acquisition approach.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 10%;">5738</td> <td>Implemented integration of Engineering Feasibility Efforts (EFE) for functional prototype terminals</td> </tr> <tr> <td>■</td> <td>629</td> <td>Continued paging prototype system efforts</td> </tr> <tr> <td>■</td> <td>1334</td> <td>Continued Defense Advanced Research Project Agency (DARPA) advanced communications technologies</td> </tr> <tr> <td colspan="2">Total</td> <td>7701</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 10%;">69</td> <td>Continue SCAMP BLK II prototype development</td> </tr> <tr> <td>■</td> <td>2</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)</td> </tr> </table>										■	5738	Implemented integration of Engineering Feasibility Efforts (EFE) for functional prototype terminals	■	629	Continued paging prototype system efforts	■	1334	Continued Defense Advanced Research Project Agency (DARPA) advanced communications technologies	Total		7701	■	69	Continue SCAMP BLK II prototype development	■	2	Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604201A Aircraft Avionics				PROJECT DC97	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DC97 Aircraft Avionics	17706	31660	7878	1828	2800	46501	31896	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: This Program Element (PE) funds the development of avionics systems required to horizontally and vertically integrate the battlefield (commonly referred to as "digitization of the battlefield"). Tasks in this PE support research efforts in the engineering and manufacturing development phases of these systems, therefore, the PE is correctly placed in Budget Activity 5. The Army Airborne Command and Control System (A2C2S) functions as a highly mobile command post. When mounted in the UH-60 helicopter with auxiliary equipment, it provides tactical voice, data, and imagery digitized battlefield communications both in secure and nonsecure modes for corps, division, and brigade commanders. The system provides battle commanders access to critical situational awareness and off-board national asset intelligence information via satellite communications. It also provides digitized battlefield communications links with Army combined arms team members, joint service and combined force elements, and intercommunications facilities for up to six operators, and joint interoperability as well as maritime and air traffic control communications. The A2C2S is in response to real world needs of combat maneuver commanders to perform highly mobile and responsive digital, voice, and imagery command and control (C2) functions in the UH-60 helicopter. The UH-60 A2C2S system will enable the commander and essential staff to remain highly mobile with the capability to interject critical C2 across the designated battle area without sacrificing access to information products or jeopardizing continuity of operations due to command post relocation. Interoperability is enhanced with this system by providing the capability to communicate digitally with Navy or Air Force close air support as well as relaying target information. This system will allow Army aviation forces access to C2 and situational awareness information for conduct of close, deep, rear, and security operations. The A2C2S is used to provide C2 for disaster relief, peacekeeping, drug interdiction, and both low and high intensity conflict missions. The A2C2S will play a major role in eliminating costly fratricide incidents via the capability to closely monitor and control operations. Satellite communications provide access to tactical communication systems and enable communication with the force and command structure from Joint Chiefs of Staff (JCS) down to battalion when required. In FY 1997, A2C2S was approved as a two year Warfighter Rapid Acquisition Program (WRAP) initiative which accelerates the development of the program by twenty-one months. RDTE funds are also required to develop data link migration, embedding Battle Command functionality, Joint Variable Message Formatting (JVMF), message buffering into the Improved Data Modem which will enable AH-64D, OH-58D, and Special Operations aircraft to digitally gather, process and transmit information.</p> <p>Acquisition Strategy: This project is comprised of multiple systems. The A2C2S is being developed by the Naval Research Laboratory. The initial production will be accomplished by the developer until preplanned product improvements are accomplished through FY 00. The production contract will be competitively awarded starting in FY 01.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none">  8455 Continued development of enhanced communications terminal, workstation consoles and other A2C2S prime mission equipment  1211 Continued development of A2C2S Antenna Interface Module (AIM)  1224 Continued development of A2C2S Workstation Software

<p>Change Summary Explanation: Funding: The FY 1997 and FY 1998 funding reflects the 3.4M and 11.0M provided by the TRADOC managed Warfighters Rapid Acquisition Program (WRAP) to accelerate the development, production and fielding of the A2C2S. Funding was reprogrammed consistent with Congressional direction. FY 98 also includes a Congressional undistributed reduction of 1.0M. FY 1999 decrease is due to an realignment of funds to higher priority requirements (-4851).</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604220A Armed, Deployable OH-58D				PROJECT D538																
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost															
D538 Kiowa Warrior Crew Station Mission Equipment Trainer (CSMET)	1100	0	0	0	0	0	0	0	1100															
<p>A. Mission Description and Budget Item Justification: The Crew Station Mission Equipment Trainer (CSMET) is a simulation training device that is designed to support training requirements for the OH-58D Kiowa Warrior flight crew. The CSMET effort responds to the lack of training devices, simulators or simulations (TDSS) available to fielded Kiowa Warrior units. Currently, the aircraft itself provides the only primary sustainment training device. Training provided through the use of the actual aircraft is at best limited due to the inability to employ total system capabilities under combat conditions, i.e., weapon systems. When the actual aircraft is not available, the aviator cannot continue to practice crew skills. As a result, aircrew skills decay rapidly. Maintaining a high level of aircrew skill has a direct impact on combat readiness and proficiency. The CSMET will support refresher and sustainment training of those skills required to initialize, operate and employ the weapons systems, aviation survivability equipment, automatic target handover system, communication and navigation equipment, mast mounted sight, data transfer system, Aviator Night Vision Imaging System (ANVIS) display, and airborne video tape recorder. The CSMET will network with other simulation devices for collective training. The project in this Program Element supports research efforts in the engineering and manufacturing development phase of the acquisition strategy and is, therefore, correctly placed in Budget Activity 5.</p> <p>Acquisition Strategy: The acquisition strategy is based primarily on the integration of government-furnished data and commercially available non-developmental items. Government-owned OH-58D Kiowa Warrior Cockpit Procedures Trainer Ada software will be integrated into the computer and image generator hardware of choice based on maximum compatibility and interoperability with other aviation simulation systems. Acquisition will be accomplished in four phases -- pre-prototype, prototype, production, and support/sustainment -- and will be accomplished utilizing an Integrated Product Team approach among various government agencies.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">818</td> <td>Awarded Phase II Development Contract - Prototype Build/Systems Integration</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">190</td> <td>Maintenance Support for Operational Testing Development and for Operational Testing</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">42</td> <td>Government Support</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">50</td> <td>Awarded Front End Analysis Contract</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>1100</td> </tr> </table> <p>FY 1998 Planned Program: Project not funded in FY 98</p> <p>FY 1999 Planned Program: Project not funded in FY 99</p>										■	818	Awarded Phase II Development Contract - Prototype Build/Systems Integration	■	190	Maintenance Support for Operational Testing Development and for Operational Testing	■	42	Government Support	■	50	Awarded Front End Analysis Contract	Total		1100

Mission Description and Budget Item Justification: This program element provides for the development and operational testing and evaluation of the RAH-66 Comanche and the T800 growth engine. The Comanche is a multi-mission aircraft optimized for the critical battlefield mission of tactical armed reconnaissance. It provides a globally self-deployable attack platform for light/contingency forces. Comanche is the solution to reconnaissance deficiencies (no night/adverse weather/high/hot/stand-off capability) and is a key component on the digitized battlefield in winning the information war. The Comanche is the Army's technology leader and provides significant horizontal technology transfer within the Army and DoD. Project DC72 provides for continued development and qualification of the T800 growth engine and air vehicle support for integration of the same into the Comanche aircraft. Project D2LT includes funding for the operational testing of Comanche to include Comanche simulation accreditation for Limited User Test and Initial Operational Test and Evaluation. Project D327 provides for development of the airframe, mission equipment package, and integration of the whole system to include training and logistic support. The projects in this program element support research efforts that complete Demonstration/Validation (Dem/Val) prototype efforts and transition to the engineering and manufacturing development phase of the acquisition strategy and are therefore correctly placed in Budget Activity 5.

<p>A. Mission Description and Justification: Project D327 - Comanche: The Comanche helicopter is a highly sustainable and operationally flexible air cavalry system, incorporating significant reductions in personnel and support equipment, capturing the latest combat technologies and capable of accepting upgrades to meet ever-changing threats. It will dominate the battlefield in the close, deep and rear operations; provide a decisive air cavalry capability in day, night, and adverse weather. It will be operationally tailorable to regional conflicts and provide the battle commander with timely, detailed reconnaissance information and an unprecedented level of lethality.</p> <p>Acquisition Strategy: Continue work with current contractor leading to Engineering and Manufacturing Development and eventual production.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 23919 Continue digitization effort ■ 209079 Continue Dem/Val prototype engineering development ■ 40440 Continue flight test program for prototype #1 ■ 9915 Continue manufacturing of prototype #2 Total 283353 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 19333 Continue digitization effort ■ 149030 Continue Dem/Val prototype engineering development ■ 8299 Update prototype #1 and complete manufacturing of #2 ■ 39371 Continue flight test program of prototype #1 ■ 7371 Begin material procurement for Early Operational Capability (EOC) aircraft ■ 5625 Small Business Innovative Research/Small Business Technology Transfer Total 229029 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> ■ 32193 Continue digitization effort ■ 183033 Continue Dem/Val prototype engineering development ■ 58370 Continue flight test program for prototype #1 and conduct first flight of prototype #2 ■ 8615 Continue to update prototypes #1 and #2

Mission Description and Budget Item Justification: This program element encompasses engineering and manufacturing development for tactical electronic warfare (EW), signals warfare (SW), aircraft survivability equipment (ASE), battlefield deception, rapid software reprogramming and protection of personnel and equipment from hostile artillery. EW encompasses the development of tactical EW equipment and systems mounted in both ground and air vehicles. The systems under this program provide the Army with the capability to degrade or deny hostile forces the effective use of their communications, countermortar/counterbattery radars, surveillance radars, infrared/optical battlefield surveillance systems and electronically fused munitions. Existing Army EW systems must be replaced or upgraded to maintain their capability in the face of threat technical advancements. This program element satisfies requirements for brigade, division, corps and higher commanders to conduct electronic warfare to meet tactical and Special Electronic Mission Aircraft (SEMA) requirements, attach/scout, and assault/cargo mission requirements. Signals Warfare Development provides for development of multifunction ground based and airborne intelligence and electronic warfare systems. The High Value Asset Defense System will provide effective protection of personnel and equipment from electronically fused munitions. TROJAN developments will complete Proof-of-Principle R&D for specific TROJAN applications in advanced threat signals processing and prototype software upgrades; high frequency (HF) algorithms for compact antenna array technology (CAAT) configured into small aperture antenna arrays; search and acquisition capabilities for unattended signal collectors; and new digital intelligence collection, processing and dissemination technology. The ARAT Project will develop, test and equip an Army wide infrastructure capable of rapidly reprogramming electronic combat software embedded in offensive and defensive weapon systems. The projects in this PE are in the engineering and manufacturing development phase of the acquisition cycle and therefore are correctly placed in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604270A Electronic Warfare (EW) Development				PROJECT D665																			
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost																		
D665 Aircraft Survivability Equipment Development	43008	45423	59757	6211	4760	8291	14437	Continuing	Continuing																		
<p>A. <u>Mission Description and Justification:</u> Aircraft Survivability Equipment Development provides for the development and system integration of Aircraft Survivability Equipment (ASE) to achieve survivability, reduce vulnerability, and enhance combat effectiveness required to fulfill special electronic mission aircraft (SEMA), attack/scout, and assault/cargo mission requirements. Equipment developed will increase combat effectiveness and potential for mission accomplishment by reducing or eliminating the ability of threat air defense systems to detect, hit, damage or destroy Army aircraft. Developments respond to the approved requirements documents, test and type classification for production and fielding of ASE systems to address infrared, radar, laser and optical/electro-optical directed air defense threats. Efforts in development include new or upgraded systems to counter monopulse, millimeter wave, frequency agile, pulse doppler and continuous wave radars, passive infrared missile seekers and laser directed weapon systems. Continual adjustments are made to this program to meet the changing and evolutionary nature of technology and threat. This program has joint service applications that are coordinated through the Joint Technical Coordinating Group for Aircraft Survivability (JTCG/AS), as well as NATO applications coordinated through DoD. This project also provides the technical base for electronic warfare equipment for Comanche and Special Operations Aircraft. The projects in this program element support research efforts that complete Demonstration/Validation (Dem/Val) prototype efforts and transition into the Engineering and Manufacturing Development (EMD) phase of the acquisition strategy and are, therefore, correctly placed in Budget Activity 5.</p> <p><u>Acquisition Strategy:</u> Project is comprised of multiple programs which have been competitively awarded.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%;"></td> <td style="width: 15%;">20618</td> <td>Continued EMD of Advanced Threat Infrared Countermeasures (ATIRCM)/Common Missile Warning System (CMWS))</td> </tr> <tr> <td></td> <td>2530</td> <td>Continued EMD of Advanced Infrared Countermeasures Munitions (AIRCMM)</td> </tr> <tr> <td></td> <td>16228</td> <td>Continued EMD of Suite of Integrated Radio Frequency Countermeasures (SIRFC)</td> </tr> <tr> <td></td> <td>1139</td> <td>Continued development of Advanced Visual-Electro-Optical Signature Suppression and Analysis (AVESSA)</td> </tr> <tr> <td></td> <td>2493</td> <td>Continued in-house and program management administration</td> </tr> <tr> <td colspan="2">Total</td> <td>43008</td> </tr> </table>											20618	Continued EMD of Advanced Threat Infrared Countermeasures (ATIRCM)/Common Missile Warning System (CMWS))		2530	Continued EMD of Advanced Infrared Countermeasures Munitions (AIRCMM)		16228	Continued EMD of Suite of Integrated Radio Frequency Countermeasures (SIRFC)		1139	Continued development of Advanced Visual-Electro-Optical Signature Suppression and Analysis (AVESSA)		2493	Continued in-house and program management administration	Total		43008

<p>A. <u>Mission Description and Justification:</u> This project supports the operational test for the Advanced Threat Infrared Countermeasures(ATIRCM)/Common Missile Warning System (CMWS) and is new start in FY1998. This project will provide active and passive Infrared Countermeasure (IRCM) protection against infrared guided weapons. The system is designed to meet operational requirements for a modular IRCM system capable of providing awareness and self protection jamming countermeasures. The system is applicable to the AH-64D, MH-47D/E, MH-60K/L, EH-60, UH-60, and CH-47D aircraft. The program has been designated a Tri-Service program, with application to the Air Force and Navy aircraft.</p> <p><u>Acquisition Strategy:</u> Operational testing is required to determine the effectiveness of the system during the development phase, meet milestone III requirement and enter the production phase</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 10px;">■</td> <td style="width: 50px;">5344</td> <td>Commence ATIRCM/CMWS Operational Test Support</td> </tr> <tr> <td>■</td> <td>138</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs</td> </tr> <tr> <td colspan="2">Total</td> <td>5482</td> </tr> </table> <p>FY 1999 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 10px;">■</td> <td style="width: 50px;">1181</td> <td>Continue ATIRCM/CMWS Operational Test Support</td> </tr> <tr> <td colspan="2">Total</td> <td>1181</td> </tr> </table> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">166</td> <td style="text-align: center;">2358</td> </tr> <tr> <td>Appropriated Value</td> <td></td> <td style="text-align: center;">5666</td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td></td> <td style="text-align: center;">-184</td> <td></td> </tr> <tr> <td>FY 1999 President's Budget Request</td> <td style="text-align: center;">0</td> <td style="text-align: center;">5482</td> <td style="text-align: center;">1181</td> </tr> </tbody> </table>										■	5344	Commence ATIRCM/CMWS Operational Test Support	■	138	Small Business Innovative Research/Small Business Technology Transfer Programs	Total		5482	■	1181	Continue ATIRCM/CMWS Operational Test Support	Total		1181		<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	FY 1998/1999 President's Budget	0	166	2358	Appropriated Value		5666		Adjustments to Appropriated Value		-184		FY 1999 President's Budget Request	0	5482	1181

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604270A Electronic Warfare (EW) Development				PROJECT DL12	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DL12 Signals Warfare Development	15687	28135	20394	8734	8785	7294	7905	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: Signals Warfare Development provides for a family of integrated ground-based and heliborne intelligence and electronic warfare common sensor systems. The Ground Base Common Sensor (GBCS) is an intercept and emitter location system. It provides division commanders with the capability to search, intercept, listen to, precisely locate for hard-kill or order-of-battle resolution, or render ineffective through electronic attack, threat command and control and fire control communications nets. It also identifies and precisely locates threat countermortar and counterbattery ground surveillance radar emissions, and identifies enemy conventional and Low Probability of Intercept (LPI) communications and non-communications emitters and jam enemy conventional and LPI communications emitters. GBCS is an evolutionary system which is intended to continually overmatch threat capabilities through a continuous modernization philosophy. Modular components, commercial standards, and open architecture features facilitate change in a cost-effective manner of changing parts via P³I vice whole system replacement. This open architecture feature satisfies the Army requirement to conduct tactical ground Communications Intelligence, Electronic Intelligence, Electronic Support, and Electronic Attack against threat communications and non-communications signals; enhances the Commander's ability to outmaneuver and destroy the enemy by locating or jamming threat command and control, fire control, and air defense centers. The GBCS will be used in two platform configurations. The GBCS-Light (GBCS-L) will be deployed on a highly mobile multipurpose-wheeled vehicle (HMMWV) in support of Light Divisions. The GBCS-Heavy (GBCS-H) will be deployed on a tracked vehicle in support of Armored and Mechanized Infantry Divisions. The third platform of the Intelligence and Electronic Warfare Common Sensor System is the Advanced QUICKFIX (AQF) which provides for a material change to the existing heliborne QUICKFIX communications intercept, collection, processing, direction finding, and jamming system and will be deployed to Army Divisions and Armored Cavalry Regiments (ACR). Configured in a Blackhawk Helicopter (EH-60A), it provides the moving platform necessary to provide for location accuracy's sufficient for "steel on target" requirements, as well as for extension of radio Line of Sight (LOS) against target emitters. This project provides for engineering and manufacturing development (EMD) and testing of Intelligence and Electronic Warfare Common Sensor (IEWCS) Subsystems and Systems leading to Milestone III and product improvement of systems after initial production. The Subsystems are:</p> <p>a. The Tactical Communications Jammer (TACJAM-A) will enhance the Division Commander's ability to outmaneuver and kill the enemy by isolating and suppressing enemy fire control and command and control (C²) nets at critical points in the battle; provide electromagnetic overwatch of the threat C² spectrum inclusive of both conventional and modern modulations, e.g., LPI; freeze the enemy in place by jamming C²; and eliminate enemy counterfire by locating High Value Targets (HVTs) for targeting. TACJAM-A consists of state-of-the-art modular and scaleable Electronic Support Measures (ESM) and Electronic Countermeasures (ECM) subsystems configured for use on a variety of air and ground prime movers (tracked, wheeled and heliborne).</p> <p>b. The Communication High Accuracy Location System Exploitable (CHALS-X) provides the targeting capability required to support the Division Commander's requirement to locate and kill the enemy by providing location of high value targets. Airborne systems mixed with ground based systems will be capable of precisely locating enemy weapon systems and units (regardless of whether the enemy uses conventional or modern radios) producing target locations sufficiently accurate for first round fire for effect by organic artillery.</p> <p>c. The Common Modules ELINT Subsystem (CMES) provides search, intercept, direction finding (DF), precision location and analysis of the primary non-communication (radar) battlefield threat emitters. While operating in a fully automatic mode, it will enhance the Division Commander's ability to outmaneuver and kill the</p>

PROJECT DL12																										
<p>enemy by specifically identifying HVTs such as enemy countermortar, and counterbattery ground surveillance radar at critical points in the battle and will provide precise emitter locations with targeting accuracy.</p> <p>The United States Marine Corps is utilizing the same subsystems as the GBCS and configuring them in a Light Armored Vehicle as a part of the Mobile Electronic Warfare Support System (MEWSS) improvement program.</p> <p>This project is unclassified and is a cooperative effort with the National Security Agency's Defense Cryptologic Program (DCP), Program Element 030885G, which provides a portion of the funds required for the development of the precision location subsystem and system integration of GBCS-L and GBCS-H.</p> <p>This program must be considered as a whole with GBCS-L, GBCS-H and AQF. All three programs leverage the others funding.</p> <p>Acquisition Strategy: In November 1995, the US Army competitively awarded a five-year (basic plus four one-year options) contract to continue development and to acquire the IEWCS systems required to meet initial Army needs. Procured during the first two years of the contract were: Limited Production, Urgent (LP(U)) units of the Ground Based Common Sensor-Light (GBCS-L) system and Low Rate Initial Production (LRIP) units of the Advanced QuickFix (AQF). The contract also provides for continued software and hardware development to correct existing deficiencies and/or to meet Operational Requirement Document (ORD) performance for all IEWCS systems including the Full Scale Engineering Development (FSED) models of the GBCS-Heavy systems. The LP(U) GBCS-L systems will undergo IOT&E in FY98 leading to a full production MS III decision review in 1QFY99. The LRIP AQF systems and the upgraded FSED GBCS-H systems will undergo a joint IOT&E scheduled in FY99 leading to a full production MS III decision reviews in 1QFY00. The current acquisition strategy is: following MS III decision approvals, full scale production for all three systems (GBCS-L, GBCS-H, and AQF) collectively will be awarded competitively.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">87</td> <td>Conducted special in-process review (SIPR) on AQF ECM)</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">4122</td> <td>Continued GBCS/AQF improvements to include TACJAM-A Signal Analyzer Upgrade, ECM subsystem integration into AQF and other product improvements resulting from Task Force XXI/Div AWE</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">8506</td> <td>GBCS-L/AQF software fixes</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">1072</td> <td>Contractor maintenance support for Task Force XXI/Div AWE</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">1900</td> <td>ADEXJAM incremental</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>15687</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">0</td> <td>Continue development and final modification of CCA boards of TACJAM-A ECM to be incorporated in GBCS-H and AQF.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">0</td> <td>Develop increased TACJAM-A special signal capabilities and correct existing platform integration problems IAW UKMOU</td> </tr> </table>			■	87	Conducted special in-process review (SIPR) on AQF ECM)	■	4122	Continued GBCS/AQF improvements to include TACJAM-A Signal Analyzer Upgrade, ECM subsystem integration into AQF and other product improvements resulting from Task Force XXI/Div AWE	■	8506	GBCS-L/AQF software fixes	■	1072	Contractor maintenance support for Task Force XXI/Div AWE	■	1900	ADEXJAM incremental	Total		15687	■	0	Continue development and final modification of CCA boards of TACJAM-A ECM to be incorporated in GBCS-H and AQF.	■	0	Develop increased TACJAM-A special signal capabilities and correct existing platform integration problems IAW UKMOU

DL12

5009 Continue Development and integration of GBCS-H

FY 1998 Planned Program: (continued)

1500 Fix existing central software issues
 4000 Contractor field tests and follow on fixes
 3049 Conduct training and provide contractor depot level repair in preparation for and support of IOT&E for GBCS-L
 10000 Conduct IOT&E on GBCS-L
 200 Prepare documentation in preparation of Milestone III for GBCS-L
 1386 Full-band DF Calibration
 2300 OPTEC Support for IOT&E, GBCS-L
 691 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
 Total 28135

FY 1999 Planned Program:

7728 Continue development and integration of GBCS-H
 4166 Conduct training and provide contractor depot repair in support of IOT&E for AQF
 8000 Conduct IOT&E on AQF/GBCS-H
 200 Conduct Milestone III on GBCS-L
 300 Prepare documentation in preparation for Milestone III on AQF/GBCS-H
 Total 20394

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY 1998/99 President's Budget	16065	13874	7228
Appropriated Value	16414	29186	
Adjustments to Appropriated Value	-727	-1051	
FY 1999 President's Budget	15687	28135	
		20394	

Change Summary Explanation:

Funding: FY99 - (+6.000) Funds redirected from APA, (AB3000) to RDTE to complete AQF IOT&E.

FY99 - (+7.000) PBD Adjusted funds from OPA, (BZ7326) to RDTE to prepare GBCS-H for IOT&E.

Schedule: GBCS-L IOT&E is scheduled to be completed in 4QFY98. GBCS-L MS III Decision is scheduled for 1QFY99.

GBCS-H IOT&E will be conducted in 3QFY99 and GBCS-H MS III Decision review will be held in 1QFY00.

AQF IOT&E will be conducted in 3QFY99 and MS III Decision review will be held in 1QFY00.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998																							
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604270A Electronic Warfare (EW) Development				PROJECT DL15																						
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost																					
DL15 Army Reprogramming and Analysis Team (ARAT)	1665	3901	3339	0	0	0	0	17670	0																					
<p>A. Mission Description and Justification: Army Reprogramming and Analysis Team (ARAT) for Target Sensing Systems (TSS) project will design, develop, implement, test, equip and institutionalize an Army-wide infrastructure capable of rapidly reprogramming electronic combat software embedded in offensive and defensive weapon systems. ATSS are those tactical weapons and sensor systems which rely on embedded, well-defined target or emitter signature data for specific identification. Systems supported by this project include but are not limited to: radar warning receiver and jammer sub-systems of attack, scout, utility and SEMA aircraft; aircraft survivability equipment; automated intelligence collection systems and jammers; advanced threat sensors for air defense, artillery and missile applications, and use as vehicle /troop self-protection systems. The project focuses on advanced information management technologies to: automate the threat recognition process; evaluate the operational impact of threat changes on inventoried sensor; develop, test and evaluate software to counter the change; develop tactical loading devices for deploying or deployed forces; and institutionalize the infrastructure to accomplish these tasks as well as distribute/disseminate the new software. The projects in this PE support development efforts in the engineering and manufacturing development phases of the acquisition strategy and therefore are correctly placed in Budget Activity 5.</p> <p>Acquisition Strategy: The ARAT to TSS project will design, develop, implement, test, equip and institutionalize all Army-wide infrastructure capable of reprogramming electronic combat software embedded in offensive and defensive weapons systems. The program requirements for software engineering, development, support equipment engineering acquisition, operational training and test and evaluations support will be acquired by the use of time and material contracts. This strategy will further such major program events such as the test and evaluation of off-the-shelf and developmental loading devices, the completion of connectivity of a secure Wide Area Network with all reprogramming centers and the development of flagging models for specific electronic combat survivability systems.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%;"></td> <td style="width: 10%; text-align: right;">1120</td> <td>Tested and evaluated off-the-shelf and developmental loading devices for ADA, Fire Support and Armor TSS</td> </tr> <tr> <td></td> <td style="text-align: right;">165</td> <td>Initiated study on the feasibility of electronic broadcast reprogramming.</td> </tr> <tr> <td></td> <td style="text-align: right;">380</td> <td>Improved or modified ARAT flagging capability for ELINT systems.</td> </tr> <tr> <td colspan="2">Total</td> <td style="text-align: right;">1665</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%;"></td> <td style="width: 10%; text-align: right;">3803</td> <td>Reprogrammed to address high priority requirements for the Army Enterprise Architecture (AEA)</td> </tr> <tr> <td></td> <td style="text-align: right;">98</td> <td>Small Business Innovative Research/Small Business Technology Transfer Program</td> </tr> <tr> <td colspan="2">Total</td> <td style="text-align: right;">3901</td> </tr> </table>											1120	Tested and evaluated off-the-shelf and developmental loading devices for ADA, Fire Support and Armor TSS		165	Initiated study on the feasibility of electronic broadcast reprogramming.		380	Improved or modified ARAT flagging capability for ELINT systems. DL16 TROJAN Development	1228	1239	1318	0	0	0	0	4389	0																														
<p>A. <u>Mission Description and Budget Item Justification:</u> This project is a Tactical Intelligence and Related Activities (TIARA) program. A key factor in modern warfare is the ability to collect, process and use information about an adversary while preventing him from obtaining similar information. TROJAN is a combined operational and readiness mission system which uses advanced networking technology to provide seamless rapid radio relay, secure communications to include voice, data, facsimile, and electronic reconnaissance support to U.S. forces throughout the world. TROJAN operations may be easily tailored to fit military intelligence unit training schedules and surged during specific events to involve every aspect of the tactical intelligence collection, processing, analysis and reporting systems. This project engineers, tests and evaluates new digital intelligence collection, processing and dissemination technology using the fielded TROJAN systems, prior to the acquisition of those technologies. The process that will enable the United States to win the battlefield information war is referred to as digitization. This capability will allow us to process and disseminate real-time intelligence data from various sources; it forms the intelligence needed to issue orders inside the threat decision cycle. To that end, it is imperative the TROJAN system keep pace with digitization initiatives in order to respond aggressively to the emerging intelligence communication threats.</p> <p><u>Acquisition Strategy:</u> Competitive contract award utilizing firm fixed price and best value selection procedures for engineering and manufacturing development.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 5%;">■</td> <td style="width: 10%;">375</td> <td>Continued operational evaluation on specific TROJAN applications for non-standard modulations techniques using digital processing technologies.</td> </tr> <tr> <td>■</td> <td>328</td> <td>Completed operational test, evaluation and engineering of video compression/processing technologies on fielded TROJAN systems.</td> </tr> <tr> <td>■</td> <td>525</td> <td>Acquired previously developed specialized software for classified pre-processing and enhanced signal processing algorithms.</td> </tr> <tr> <td colspan="2">Total</td> <td>1228</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 5%;">■</td> <td style="width: 10%;">247</td> <td>Conduct operational test and evaluation of previously developed specialized software and enhanced signal processing algorithms).</td> </tr> <tr> <td>■</td> <td>330</td> <td>Implement and test Warfighter Information Network (WIN) interfaces technology for the TROJAN intelligence network.</td> </tr> <tr> <td>■</td> <td>500</td> <td>Acquire and apply multi-bandwidth compression algorithm technology to maximize TROJAN intelligence collection network throughput-</td> </tr> <tr> <td>■</td> <td>131</td> <td>Study the feasibility of incorporating Direction Finding (DF) enhancements to TROJAN Remote Receiving Groups (RRGs).</td> </tr> <tr> <td>■</td> <td>31</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs</td> </tr> <tr> <td colspan="2">Total</td> <td>1239</td> </tr> </table>										■	375	Continued operational evaluation on specific TROJAN applications for non-standard modulations techniques using digital processing technologies.	■	328	Completed operational test, evaluation and engineering of video compression/processing technologies on fielded TROJAN systems.	■	525	Acquired previously developed specialized software for classified pre-processing and enhanced signal processing algorithms. Mission Description and Budget Item Justification: This program element funds the development of the All Source Analysis System (ASAS) Evolutionary Acquisition (EA) system and its operational testing. ASAS is the automated support system for the intelligence and electronic warfare (IEW) functional area of the Army Battle Command System (ABCS). It is a tactically deployable Automated Data Processing (ADP) system designed to support management of IEW operations and target development in battalions, brigades, armored cavalry regiments (ACR), separate brigades, divisions, corps, and echelons above corps (EAC). The projects in this program element support research efforts in the engineering and manufacturing development phases of the acquisition strategy and therefore are correctly placed in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604321A All Source Analysis System (TIARA)				PROJECT DB19	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DB19 ASAS Evolutionary Acquisition	34739	23892	23126	26078	35698	29964	12620	Continuing	Continuing
<p>A. Mission Description and Justification: Project DB19 - ASAS Evolutionary Acquisition: This project funds the development of the Army's only tactical intelligence fusion project, the ASAS Block II Evolutionary Acquisition, within the Intelligence Fusion Project Office. The successful execution of military operations requires a flexible and modular intelligence and targeting system that will provide tactical commanders a common view of the battlefield and a means for gaining a timely and comprehensive understanding of enemy force deployments, capabilities, and potential courses of action. The ASAS is a ground based, mobile, command and control, intelligence processing system. The ASAS system provides automated support to the combat commander in the areas of intelligence collection management, all-source fusion (signals intelligence, correlation, imagery, and human intelligence) target and situation analysis, single- and multi-source processing, intelligence reporting, electronic warfare/countermeasures, and operational security as well as "digitized Army" automation support to the battlefield commander's command and control.</p> <p>Acquisition Strategy: The ASAS Block II development program will build upon and expand the capabilities and functionality developed and produced in the ASAS Block I System including conversion to the Army Tactical Command and Control System (ATCCS) Common Hardware/Software Open architecture and the OSD directed Defense Information Infrastructure Common Operating Environment (DII COE) and Modernized Integrated Database (MIDB). Additional software capabilities include enhanced intelligence and command and control functionality, jump and degraded mode operations, enhanced communications, and improved reliability and supportability. ASAS Block II strategy maximizes the use of Government Furnished Equipment (GFE), government and commercial Non-Developmental Item (NDI) software, reuse of proven Office of Secretary of Defense (OSD) and ATCCS Command, Control, Communications and Intelligence (C3I) software, multiple prototype deliveries and continuous user test and evaluation opportunities. Building upon experience and feedback gained from the fielded ASAS and other tactical fusion prototypes, ASAS Block II will undergo management review in FY00.</p> <p>FY 1997 Accomplishments:</p> <div style="margin-left: 20px;"> <p>31167 Continued ASAS Block II Evolutionary Acquisition Engineering and Manufacturing Development (EMD) Capability Packages</p> <ul style="list-style-type: none"> -Implemented DII COE-Compliant System Services and Common Applications -Initiated Unified Database Scheme -Continued MIDB effort -Initiated Operational Diagnostic Capability -Rehosted and improved All Source intelligence functionality from Blk I to Blk II -Enhanced RWS to meet evolving DIV XXI capabilities <p>3572 Conducted Development/Operational/Assessment Testing</p> <p>Total 34739</p> </div>

PE NUMBER AND TITLE

0604321A All Source Analysis System (TIARA)

PROJECT

DB19**FY 1998 Planned Program:**

20946	Continue ASAS Block II Evolutionary Acquisition EMD Capability Packages
	-Implement DII COE-Compliant System Services and Common Applications
	-Develop and integrate CP-ACE Modules
	-Develop Operational Diagnostic Capability
	-Complete MIDB Effort
	-Continue rehost and improvement of All Source intelligence functionality from Blk I
	-Enhance RWS to meet evolving EXFOR XXI capabilities
	-Develop objective target analysis capability
2385	Conduct Development/Operational/Assessment Testing
561	Small Business Innovative Research/Small Business Technology Transfer Program
Total	23892

FY 1999 Planned Program:

20691	Continue ASAS Block II Evolutionary Acquisition EMD Capability Packages
	-Integrate and test ASAS Block II final delivery
	-Complete rehost and improvement of All Source intelligence functionality from Blk I
	-Complete enhancement of RWS-C to meet evolving EXFOR XXI capabilities
	-Level 6 DII COE migration
	-Interface initial CI/HUMINT capability into ACE
	-Final assessment of "Year 2000" Proof of Operation
	-Enhance embedded training
2435	Conduct ASAS Block II Testing
Total	23126

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY1998/1999 President's Budget	35660	21598	23813
Appropriated Value	36433	24798	
Adjustments to Appropriated Value	-1694	-906	
FY1999 President's Budget	34739	23892	23126

Change Summary Explanation: Funding: FY98 (+2294) Funding increase resulted from Congressional increase of 3200 to support ASAS software upgrade efforts less undistributed Congressional decrements in the appropriations bill(-906) applied against this PE/Proj.

<p>A. Mission Description and Budget Item Justification: Project DB41 - CI/HUMINT Management System (CHIMS): The project funds the development of the All Source Analysis System (ASAS) Counter Intelligence/Human Intelligence (CI/HUMINT) subsystem. This subsystem is the CI/HUMINT component of the Intelligence and Electronic Warfare (IEW) sub-element of the Army Battle Command System (ABCS). It is a counter intelligence and human intelligence automation system that meets Army tactical CI/HUMINT information collection, investigation, interrogation, operation, document exploitation, and force protection automation requirements. The architecture is built from three sub-elements. The first tier tactical component to a three tiered automation support architecture for tactical CI/HUMINT operations is the CI/HUMINT Automated Tool Set (CHATS). CHATS operates at the Counter Intelligence Team/Interrogation Prisoner of War (IPW) Team level. The other two major components to the CHIMS architecture are the Counter Intelligence Operations/Interrogation Facility Workstation (OPS/IF WS) for DS/GS MI unit command and control which provides functional interfaces to the All Source Analysis System, and the CI Single-Source Processors (CI SSP) which will operate within the ASAS Analysis and Control Element (ACE).</p> <p>Acquisition Strategy: FY99 and FY00 funding supports continued improvements and functionality enhancements to the CHATS software baseline and the initiation of development of the OPS/IF workstation software baseline. During FY01 through FY03 the OPS/IF software baseline will fully mature and the CHATS baseline will undergo an evolutionary transition to a new generation of modernized COTS and developed software programs. The CHATS system provides agents the capability to manage assets and analyze information collected through investigations, interrogations, collection, and document exploitation. With CHATS, CI units may electronically store collected information in a local database, associate information with digital photography, and transmit/receive information over existing military and civilian communications. The CHATS provides these functions primarily with COTS software operating in a laptop computer within a hardened transport case. Current planning envisions the capability for information exchange between CHATS and the CI/HUMINT Operations/Interrogation Facility (OPS/IF) workstation located at MI Battalions and Brigades. In turn, the OPS/IF workstation will provide processed information to ASAS CI/HUMINT Single-Source Processor (CI/H SSP) workstations at the MI Brigade Analysis Control Team (ACT) and the Division Analysis Control Element (ACE).</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <div style="margin-left: 20px;"> <p>1500 Develop, investigate and apply functionality enhancements to the CHATS developmental baseline</p> <ul style="list-style-type: none"> -Migrate existing CHATS software to DII/COE baseline -Data handling </div>

<p>A. Mission Description and Justification: Project D2FT - ASAS Test and Evaluation: This project finances the direct costs of planning and conducting testing and evaluation of the ASAS by the Operational Test and Evaluation Command (OPTEC). ASAS is an Acquisition Category (ACAT) I system with several dedicated iterations of Test and Evaluation (Technical and Operational) between FY 95 and FY 99. Testing and evaluations are conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. As necessary, OPTEC provides Army leadership with an evaluation of effectiveness and suitability of the system. Project D2FT is restructured from PE 0605712A.</p> <p>Acquisition Strategy: Not applicable, see B19 above</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 15%;">2724</td> <td>Conducted ASAS Block II Technical and Operational Testing and Evaluation</td> </tr> <tr> <td colspan="2">Total</td> <td>2724</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 15%;">2147</td> <td>ASAS (ACE and RWS-C) Development and Operational Test</td> </tr> <tr> <td style="width: 5%;">■</td> <td style="width: 15%;">55</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)</td> </tr> <tr> <td colspan="2">Total</td> <td>2202</td> </tr> </table> <p>FY 1999 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 15%;">2255</td> <td>ASAS Phase 4 Final Delivery Operational Test</td> </tr> <tr> <td colspan="2">Total</td> <td>2255</td> </tr> </table> <p>B. <p>A. Mission Description and Budget Item Justification: Provides for Engineering and Manufacturing Development (EMD) for Follow-On To TOW (FOTT), a vehicle mounted, crew served Heavy Anti-tank Missile System which will replace/supplement the TOW missile family. It will be integrated onto and fired from the High Mobility Multi-purpose Wheeled Vehicle (HMMWV) with TOW Improved Target Acquisition System (ITAS), on the Bradley Fighting Vehicle System (BFVS) A3 with Improved Bradley Acquisition Sub-system (IBAS) platforms and the BFVS A2/A2ODS platforms. The FOTT will be capable of operating out to the maximum range required in the FOTT Operational Requirements Document (ORD) and will perform under day/night adverse weather conditions and obscurants. The FOTT will be countermeasures hardened and will increase crew survivability. This program element support research effort in the engineering and manufacturing development phase of the acquisition strategy and are therefore correctly placed in budget activity 5.</p> <p>Acquisition Strategy: The FOTT program will provide a systems approach by leveraging existing missile technologies. This next-generation missile will be compatible with both current and emerging TOW missile platforms. The EMD contract will be competitively awarded. EMD activities will include development of the missile and the ITAS/BFVS A3 (IBAS) applique kits within the 66 month effort, followed by a 20 month effort for the BFVS A2/A2ODS applique kit.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">1634</td> <td>Continued EMD Preparation: Developed Milestone II Documentation, System Specification and Final Request for Proposal.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">4300</td> <td>Supported Contractor Pre-EMD Risk Reduction Tests: Provided Range Support, Range Instrumentation Suite, Range Facility Support, Range Target Sets, Range Test Management, Execution and Data Reduction, TOW Platform Shipment, Integration and Refurbishment.</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td style="text-align: right;">5934</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">1696</td> <td>Release EMD Request for Proposal; Conduct Source Selection; Complete Milestone II; and Award EMD Contract.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">1097</td> <td>Pre-Critical Design Review (CDR) Component Hardware Analysis and Procurement of Component Hardware to Support Pre-CDR Tests.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">8848</td> <td>Initiate Component Design and System Engineering Analysis for Preliminary Design Review.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">598</td> <td>Prepare for Early User Assessment.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">873</td> <td>Procure Open System Integration and Simulation Laboratory (SIL) Hardware and Software.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">337</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs.</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td style="text-align: right;">13449</td> </tr> </table>										■	1634	Continued EMD Preparation: Developed Milestone II Documentation, System Specification and Final Request for Proposal.	■	4300	Supported Contractor Pre-EMD Risk Reduction Tests: Provided Range Support, Range Instrumentation Suite, Range Facility Support, Range Target Sets, Range Test Management, Execution and Data Reduction, TOW Platform Shipment, Integration and Refurbishment. RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604604A Medium Tactical Vehicles				PROJECT DH07	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DH07 Medium Tactical Vehicles	5719	3614	0	0	1613	0	0	Continuing	Continuing

A. Mission Description and Budget Item Justification: This program element (PE) supports modernization of the Army's medium truck fleet. The Family of Medium Tactical Vehicles (FMTV) will replace aging M44 Series 2 1/2 ton trucks, M39 and M809 Series 5 ton trucks which are beyond their average useful life of 20-22 years. FMTV will also provide a follow-on to the current M939/A2 Series 5 ton truck. FMTV is required to fill 2 1/2 (LMTV) and 5 ton truck (MTV) requirements, resolve operational deficiencies and operate throughout the theater as multi-purpose transportation vehicles used by combat, combat support and combat service support units. This system is designed to be rapidly deployable worldwide and operate on primary and secondary roads, trails, and cross-country terrain. Vehicles operate in all climatic conditions. In FY 1997 and FY 1998, Project DH07 funds the Army's portion of the Medium Tactical Truck Remanufacture Program (MTTR). This research and development effort is a prelude to embarking on a major remanufacture program to increase the mobility, maintainability and reliability of the existing 5 ton fleet. Funding in FY97 and FY98 harmonizes the Army effort with the U.S. Marine Corps Medium Tactical Vehicle Replacement (MTVR) program as directed by Congress. The Army portion of this program is designed to reduce O&S costs and resolve operational deficiencies associated with the existing fleet. This Program Element supports research efforts in the engineering and manufacturing development phases of the acquisition strategy and is therefore correctly placed in Budget Activity 5.

Acquisition Strategy: The acquisition strategy for the Medium Tactical Truck Remanufacture Program (MTTR) is in two phases. In the first phase, two CPFF contracts were awarded. Each contractor produced five Army and five USMC prototypes. The FY98 funding will be used to complete testing of the Army vehicles. Based on the test results, as well as production proposals, one contractor will be selected for award of a five year multiyear production contract.

FY 1997 Accomplishments:

■	4337	Prototype Contracts (MTTR)
■	217	Support Costs (Engineering/Quality/Matrix) (MTTR)
■	1165	Developmental Testing (MTTR)
Total		5719

FY 1998 Planned Program:

■	2145	Developmental Testing (MTTR)
■	1250	Support Costs (Engineering/Quality/Matrix) (MTTR)
■	129	Technical Support Contract (MTTR)
■	90	Small Business Innovative Research/Small Business Technology Transfer Programs
Total		3614

<p>A. <u>Mission Description and Budget Item Justification:</u> This program element supports the conduct of Engineering and Manufacturing Development (EMD) in smoke and obscurant agents, munitions, and devices to improve survivability of the combined arms force, complement combined weapons systems, and enhance force effectiveness and combat power. Funding supports (1) Motorized Dual Purpose Mechanical Smoke Generator, M56 mounted on the High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) to provide large area visual, infrared (IR) and millimeter wavelength (MMW)-radar obscuration; and (2) Vehicle Engine Exhaust Smoke System which provides on-board obscuration of heavy armor systems. The project in this Program Element supports efforts in the engineering and manufacturing development phase of the acquisition strategy and are therefore correctly placed in Budget Activity 5.</p> <p><u>Acquisition Strategy:</u> Project D200 – Smoke/Obscurants: The Vehicle Engine Exhaust Smoke System (VEESS) will be developed in-house and will be applied to systems via modification work order.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%;">706</td> <td style="width: 80%;">VEESS – Initiate engineering study/proof of principle and modification work order.</td> </tr> <tr> <td>Total</td> <td>706</td> <td></td> </tr> </table> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%; border: none;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">703</td> </tr> <tr> <td>Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">706</td> </tr> </tbody> </table>										■	706	VEESS – Initiate engineering study/proof of principle and modification work order. <p>A. <u>Mission Description and Budget Item Justification:</u> This program provides for the continuation of Engineering and Manufacturing Development (EMD) of a manportable antitank weapon system for the combined arms team employment. The infantry must have the capability to defeat numerically superior armored forces. The present medium infantry antitank weapon is DRAGON. The system developed within this program element will replace the DRAGON to provide enhanced lethality for the early entry force. It will have a high kill rate against all known armor threats at extended ranges under day/night, adverse weather conditions and in the presence of battlefield obscurants. This system will be hardened against countermeasures and will not require extensive training for effective employment. Active protection system developments will be considered and modifications studied to defeat these devices if necessary. Software improvements to maintain lethality against evolving targets and countermeasures and increase robustness of system performance in all environments will be pursued. Integration of Advanced Main Charge Warhead (AMCW) and Lethality Improvement Tracker Enhancement (LITE) technologies will be pursued. This project supports research efforts in the engineering and manufacturing development phase of the acquisition strategy and therefore is appropriate to Budget Activity 5.</p> <p><u>Acquisition Strategy:</u> Not applicable.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 192 Program Management ■ 814 Test Support ■ 1297 Lethality Improvement Tracker Enhancement ■ 3552 Advanced Main Charge Warhead Total 5855 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 1910 Program Management ■ 1575 Test Support ■ 2716 Lethality Improvement Tracker Enhancement ■ 1375 Advanced Main Charge Warhead ■ 195 Small Business Innovative Research/Small Business Technology Transfer Programs Total 7771

D088 Wide Area Mine Engineering Development	25355	19189	23189	0	0	0	0	0	250386
<p>A. <u>Mission Description and Budget Item Justification:</u> The Wide Area Munition (WAM), a “smart,” remotely-reprogrammable antitank mine, provides unique control and offensive capability for a variety of missions. WAM will significantly reduce Army losses by using advanced smart munitions technology on the battlefield. The program provides for Engineering and Manufacturing Development (EMD) of the basic WAM deployed by hand emplacement with one-way communications. The pre-planned product improvement basic WAM provides a two-way command and control and redeployable capability. The project in this Program Element supports the EMD phase of the acquisition strategy for the WAM and is, therefore, appropriately placed in Budget Activity 5.</p> <p><u>Acquisition Strategy:</u> The basic WAM transitioned to Low Rate Production (LRP) in 3QFY96. A sole source Fixed Price Incentive Fee contract was awarded to the EMD contractor for the LRP quantity. Type classification standard is planned for 3QFY98. Production buys will be included under the LRP contract as Firm Fixed Price options. A sole source Cost Plus Incentive Fee contract for EMD of an improved WAM was awarded to the basic WAM developer in FY 1996.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 8341 Completed basic WAM design. ■ 5788 Completed basic WAM Technical Test hardware fabrication. ■ 6103 Completed Technical Test/Initial Operational Test and Evaluation/Live Fire Test for basic WAM. ■ 313 Conducted testing for WAM prototype individual trainer and collective trainer software. ■ 4810 Completed WAM PIP Command and Control Sub-system preliminary designs Total 25355 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 11789 Conduct WAM PIP preliminary design and functional configuration audit efforts ■ 1240 Complete WAM PIP Trainer and System Analysis Models ■ 5720 Fabricate hardware and conduct WAM Basic Cold Region Test and Evaluation ■ 440 Small Business Innovative Research/Small Business Technology Transfer Programs Total 19189

E49 Heavy Expanded Mobility Tactical Truck (HEMTT)	0	0	0	0	0	7792	7663	Continuing	Continuing

Mission Description and Budget Item Justification: Program element funds various heavy tactical vehicle capabilities to support combat and combat support missions. These missions include the following: line haul, local haul, unit resupply; and transporting water, ammo, and general cargo. FY98 funding supports requirements for a Trailer R&D program to demonstrate technologies that support the Army's objectives to minimize operational and support costs, while modernizing trailer systems that provide significant benefits to the Army warfighting capability. In FY02/03, Project E49 will provide the RDTE funding to support a competitive procurement of a new design Heavy Expanded Mobility Tactical Truck (HEMTT) to begin replacement of the current fleet. This program element supports research efforts in the engineering and manufacturing development phases of the acquisition strategy and is therefore correctly placed in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604622A Family of Heavy Tactical Vehicles				PROJECT D659	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D659 Family of Heavy Tactical Vehicles	4906	4845	0	0	0	0	0	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: In FY97 this project supported requirements to develop expanded heavy tactical vehicle capabilities to meet the emerging needs of Army users through the HEMTT Extended Service Program (ESP) and Palletized Load System-Enhanced (PLS-E) initiative. The project will continue to develop and test the HEMTT ESP test bed vehicles to improve the readiness, maintainability, and safety of the HEMTT fleet through ESP. The PLS-E, a designated Warfighter Rapid Acquisition Program (WRAP) will provide critical positive control of transportation assets and all-weather capability, to provide force protection and rapid crisis response, and to track and shift critical assets to support the maneuver commander. This capability will be provided by the Movement Tracking System (MTS), which is a satellite-based tracking/communication system comprised of a personal computer with mobile and base units, global positioning system, two-way digital messaging capability, and the ability to track and control vehicles. In FY98 this project supports requirements for a Trailer R&D program to demonstrate technologies that support the Army's objectives to minimize operational and support cost, while modernizing trailer systems that provide significant benefits to the Army warfighting capability. This project seeks to demonstrate technologies that improve the efficiency and sustainability of the trailer fleet to meet current and future requirements. The project will focus on demonstrating and validating advanced technologies and horizontal technology insertion. The project will demonstrate general military utility and the ability to support current operations as well as Force XXI and the Army After Next (AA) tactical logistics operations</p> <p>Acquisition Strategy: The strategy for HEMTT ESP is to develop and test prototypes of future requirements to determine producibility and feasibility of incorporating vehicles into future production contracts. Movement Tracking System (MTS) of the PLS-E is a Non-developmental Item (NDI) acquisition, using Commercial Off The Shelf (COTS) technology and components. First year procurement supports two prototype divisional and corps slices using Warfighter Rapid Acquisition Program (WRAP) RDTE funds. In FY98, the Army will continue the program with procurement funding. A competitive award is planned for 3QFY98.</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604622A Family of Heavy Tactical Vehicles	PROJECT D659

FY 1997 Accomplishments:

HEMTT ESP	
■	49 Analysis of HEMTT ESP Areas of Opportunity (Phase I)
■	119 Analysis of Selected HEMTT ESP Alternatives (Phase II)
■	1032 Final HEMTT ESP Hardware Design/Build Test Bed Vehicles (Phase III)
■	706 Tested HEMTT ESP Test Bed Vehicles (Phase IV)
PLS-E	
■	50 Developed technical specifications based upon COTS approach
■	150 Conducted Market Survey/ Identified commercial sources meeting best value criteria
■	2225 Equipped Prototype Division and Corps slices with MTS
■	300 Conducted combined Development and Operational Test
■	275 Evaluate impact on Digitized Force
Total	4906

FY 1998 Planned Program:

Tactical and Support Vehicles (Trailers)	
■	2600 Current and Future Tactical Operational Improvements
■	370 Mobility and Deployment Enhancements
■	758 System Safety Environment & Management
■	995 Life Cycle Cost Reduction
■	122 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) cut
Total	4845

FY 1999 Planned Program: Project not funded in FY 1999

<p>A. Mission Description and Budget Item Justification: This program element funds continuously evolving efforts for the development of Air Traffic Control (ATC) systems for both tactical and fixed base applications. It funds the integration and qualification of an Air Traffic Navigation, Integration, and Coordination System (ATNAVICS) and Mobile Tower System (MOTS). This system provides urgently needed communications and precision/non-precision approach and flight following capability in support of Army tactical airfields, remote landing zones, drop zones, pickup zones and temporary helicopter operating areas worldwide. MOTS automated tower system is designed to integrate with secure modernized aircraft communications. This is a non-developmental item (NDI) program. Fixed base ATC efforts funded by this line include Navigation Air Systems Modernization, Communication System Modernization and digitization of the ATC structure. The tasks in this Program Element support research efforts in the engineering and manufacturing development phases of the acquisition strategy and are therefore correctly placed in Budget Activity 5.</p> <p>Acquisition Strategy: The acquisition strategy is to procure an ATNAVICS prototype through a Cost Plus Fixed Fee (CPFF) contract for integration of electronic/radar components to include design, development, and testing of an integrated prototype over a three year period. An additional component of the strategy is to continue concept exploration and design definition of the MOTS.</p> <p>FY 1997 Accomplishments:</p> <p>ATNAVICS</p> <ul style="list-style-type: none"> ■ 6734 Continue development of prototype ■ 302 Developmental and Operational Testing <p>MOTS</p> <ul style="list-style-type: none"> ■ 50 Pre-market analysis for state of the art systems solution <p>Total 7086</p> <p>FY 1998 Planned Program:</p> <p>ATNAVICS</p> <ul style="list-style-type: none"> ■ 3624 Continue development of prototype ■ 700 Development and Operational Testing <p>MOTS</p> <ul style="list-style-type: none"> ■ 50 Market Analysis ■ 50 Evaluation and Suitability Study and Cost Savings Data ■ 109 Small Business Innovative Research/Small Business Technology Transfer Programs

<p>A. <u>Mission Description and Budget Item Justification:</u> The Command and Control Vehicle (C2V) is a highly mobile, survivable, and responsive tracked platform designed for use by battalion through corps battle staffs in heavy force operations. The C2V provides a reconfigurable (tailorable) command and control capability able to host both current and future command, control, communications, computer, and intelligence (C4I) systems. The C2V supports the Army's Force XXI/Digitization efforts and will be compatible with Army Tactical Command and Control Systems. The C2V began as a Desert Storm initiative in response to shortcomings in the current M577 Command Post Vehicle. The C2V is currently in Low Rate Initial Production (LRIP) and is appropriately placed in Budget Activity 5.</p> <p><u>Acquisition Strategy:</u> C2V approved for type classification and Low Rate Initial Production (LRIP) quantity of 46 vehicles in 4Q96. Based on the LRIP decision, the Army will procure 439 C2V vehicles. Follow-on Sole-Source/Firm Fixed Price & Cost Plus Incentive Fee contracts and Fixed Price with Options (FPO) contracts are in place for C2V Low Rate Initial Production (LRIP). C2V LRIP is focused on testing and production planning to meet Initial Operational Test and Evaluation (IOTE) and First Unit Equipped (FUE) in FY99.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 5%;">901</td> <td>Completed Technical Data Package</td> </tr> <tr> <td style="text-align: center;">■</td> <td>1911</td> <td>Logistics Effort</td> </tr> <tr> <td style="text-align: center;">■</td> <td>512</td> <td>Prototype Manufacturing</td> </tr> <tr> <td style="text-align: center;">■</td> <td>759</td> <td>Completed Technical Testing</td> </tr> <tr> <td style="text-align: center;">■</td> <td>574</td> <td>Continued Vulnerability/Survivability/Live Fire Testing</td> </tr> <tr> <td style="text-align: center;">■</td> <td>2309</td> <td>Advanced Integrated Collective Protective System (AICPS) Development/Procurement</td> </tr> <tr> <td style="text-align: center;">■</td> <td>579</td> <td>Project Management</td> </tr> <tr> <td colspan="2" style="text-align: left;">Total</td> <td>7545</td> </tr> </table>										■	901	Completed Technical Data Package	■	1911	Logistics Effort	■	512	Prototype Manufacturing	■	759	Completed Technical Testing	■	574	Continued Vulnerability/Survivability/Live Fire Testing	■	2309	Advanced Integrated Collective Protective System (AICPS) Development/Procurement	■	579	Project Management	Total		7545

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998								
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604641A Tactical Unmanned Ground Vehicle				PROJECT DE47							
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost						
DE47 Tactical Unmanned Gnd Veh (TUGV)	2728	2604	2468	2428	2380	0	0	0	12608						
<p>A. Mission Description and Budget Item Justification: The Army is the lead for this joint service program. The development of a Tactical Unmanned Ground Vehicle (TUGV) provides the commanders the ability to see the battlespace while at the same time reducing soldiers' exposure during dangerous reconnaissance, surveillance, target acquisition (RSTA) and Nuclear Biological and Chemical (NBC) detection missions. Performs as a force multiplier, eliminates trickle-down combat information, reduces the "fog-of-war" and fills the brigade intelligence gap. Most importantly, the TUGV will displace brigade and battalion commanders from the bottom of the combat intelligence food chain. Six unmanned systems per battalion, operating out front, provide a force multiplication capability where TUGV's report the nature of the terrain, find the enemy, locate obstacles, acquire targets, detect chemical vapors, and provide this information directly to those who need it the most--the battalion commander's battle staff. This project is OSD funded through Milestone II (3rd Qtr FY 99). This PE supports the critical transition of Defense Advanced Research Project Agency (DARPA) developed technologies to the Project Manager (PM) Unmanned Ground Vehicles/Systems so that they can be assessed (maturity, supportability, operationally) during user appraisals, packaged and readied for incorporation into the TUGV Engineering and Manufacturing Development (EMD) performance specifications. PE supports research efforts in the engineering, manufacturing and design phase of the acquisition cycle and is therefore placed in Budget Activity 5.</p> <p>Acquisition Strategy: The Joint Project Office is following a disciplined Evolutionary Acquisition strategy. This strategy requires Horizontal Technology Integration (HTI) of emerging sensors, lasers, and command and control data link technologies so that the first generation TUGV will enable soldiers to perform dangerous RSTA, biological and chemical detection, and targeting missions from remote and safer locations. This program differs from traditional acquisition programs by incorporating an in-house Program Definition and Risk Reduction phase. Prototype systems are being built during this phase using state-of-the-art sensors, controlling actuators, low bandwidth communications, mission planning, and off-road navigation technologies. This Program Definition and Risk Reduction phase will produce a system and interface specifications and detailed analysis to demonstrate Milestone (MS) I exit criteria and facilitate Cost and Operational Effectiveness Analysis (COEA) studies. The program utilizes a TUGV Integrating Integrated Product Team (IIPT) approach. A full and open competition will be conducted at MS II to select a system prime contractor.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 10%; vertical-align: top;">■</td> <td style="width: 10%; vertical-align: top;">2728</td> <td style="vertical-align: top;">Transferred mature technologies from DARPA Demonstration (Demo) II Program, to include incorporating mission planning capabilities into the TUV System Specification, porting automated route planning and stealth observation point planning algorithms for use with the TUV prototype, and porting the mission planning and control station to a portable unit. BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604642A Light Tactical Wheeled Vehicle					
COST <i>(In Thousands)</i>	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	3409	0	0	0	0	0	0	3409	3409
DE40 High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) Prototype	2859	0	0	0	0	0	0	2859	2859
DE41 Armored Security Vehicle (ASV)	550	0	0	0	0	0	0	550	550

Mission Description and Budget Item Justification: This PE supports all Light Tactical Wheeled Vehicles such as the High Mobility Multi-Purpose Wheeled Vehicle (HMMWV), HMMWV Extended Service Program (ESP), Commercial Utility Cargo Vehicle (CUCV) and the Armored Security Vehicle (ASV). In FY97, Project DE40 funds the RDT&E effort of the HMMWV Remanufacture Program and Project DE41 funds completion of the Armored Security Vehicle (ASV) R&D effort. This Program Element supports research efforts in the engineering and manufacturing development phases of the acquisition strategy and is, therefore, correctly placed in Budget Activity 5.

COST <i>(In Thousands)</i>	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DE40 High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) Prototype	2859	0	0	0	0	0	0	2859	2859

A. Mission Description and Budget Item Justification: The HMMWV is a lightweight, high performance, four-wheel drive, air transportable and air droppable, high mobility tactical wheeled vehicle. The HMMWV consists of a single chassis that can be adapted to any one of four models at Direct Support (DS) or General Support (GS) level. The four models include: Cargo/Utility, Armor, Ambulance and Shelter Carrier. FY 1997 funds the HMMWV Extended Service Program (ESP). The Program Manager, Light Tactical Vehicles initiated the Joint Army/Marine Corps HMMWV ESP program in FY 1995. The objective of the HMMWV ESP program is to extend the useful service life of the vehicle another 14 years and provide operational and safety improvements to the current fleet of vehicles. The remanufactured HMMWVs will have performance characteristics equal to or better than the original product. This will be achieved by a combination of component refurbishment and replacement. Components which have been improved during the evolution of the HMMWV will be incorporated in the remanufactured vehicles where technically and economically feasible.

Acquisition Strategy: The acquisition strategy for the HMMWV ESP is to develop a remanufacture package leading to a five year competitive multi-year production contract.

FY 1997 Accomplishments:

■	2600	Initiated Remanufacture Package – HMMWV ESP
■	259	Support Costs (Engineering/Quality/Matrix)
Total	2859	

FY 1998 Planned Program: Project not funded in FY 1998

FY 1999 Planned Program: Project not funded in FY 1999

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY 1998/1999 President's Budget	2937	9909	39919
Appropriated Value	3000	0	
Adjustments to Appropriated Value	-141	0	
FY 1999 President's Budget	2859	0	0

Change Summary Explanation: Funding: FY98 reduction (-9909) due to Congressional adjustment. FY99 Funding redistributed pending program review.

DE41 Armored Security Vehicle (ASV)	550	0	0	0	0	0	0	550	550																																
<p>A. <u>Mission Description and Budget Item Justification:</u> The Armored Security Vehicle (ASV) is a turreted, lightly armored all-wheel drive combat support vehicle which will provide essential protection to selected Military Police units in highly exposed threat environments. The Military Police (MP) currently use the High Mobility Multi-Purpose Wheeled Vehicle. The ASV is required to provide improved ballistic protection, increased payload and NBC protection to the MP teams. The need for such a wheeled vehicle was highlighted by recent humanitarian missions such as Operation Restore Hope in Somalia and conflict in Bosnia. There is no other comparable system in the inventory which offers the ballistic protection, transportability and mobility of the ASV. Congress directed FY 1995 funding for this program under PE 0604328D to insure all services' needs were met. A joint service memorandum is in place.</p> <p><u>Acquisition Strategy:</u> The acquisition strategy for ASV awarded one prototype contract (Dec 95).</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 10px;">■</td> <td style="width: 10px;">119</td> <td>Developmental Testing</td> </tr> <tr> <td>■</td> <td>25</td> <td>Engineering Support</td> </tr> <tr> <td>■</td> <td>406</td> <td>Prototype Contract</td> </tr> <tr> <td colspan="2">Total</td> <td>550</td> </tr> </table> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> <tr> <td>Appropriated Value</td> <td style="text-align: center;">0</td> <td></td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td style="text-align: center;">550</td> <td></td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: center;">550</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> </tbody> </table> <p>Change Summary Explanation: Funding: FY97 – Reprogrammed from Bridging 654804.DH01 and various projects under Operating Agency 5S to fund shortfall to contractual and test requirements (+550)</p>										■	119	Developmental Testing	■	25	Engineering Support	■	406	Prototype Contract	Total		550		<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	FY 1998/1999 President's Budget	0	0	0	Appropriated Value	0			Adjustments to Appropriated Value	550			FY 1999 President's Budget	550	0	0

D175 Advanced Field Artillery System Multi-Option Fuze	6408	0	4500	3000	2300	0	0	0	48498

Mission Description and Budget Item Justification: This program element supports the Engineering and Manufacturing Development efforts for the Multi-Option Fuze for Artillery (MOFA) and the Future Scout Vehicle (FSV). MOFA will provide proximity, time, delay and point detonation functions for 105mm and 155mm bursting projectiles. The FSV will replace the current ground scout systems in the battalion/brigade and division/regiment levels. The projects in this program element support research efforts in the Engineering and Manufacturing Development phase of the acquisition cycle and are therefore correctly placed in Budget Activity 5.

D175 Advanced Field Artillery System Multi-Option Fuze	6408	0	4500	3000	2300	0	0	0	48498
<p>A. <u>Mission Description and Justification</u> This project finances the Engineering and Manufacturing Development phase of the Multi Option Fuze Artillery (MOFA). MOFA will provide proximity, delay, time and point detonation functions for 105mm and 155mm bursting projectiles. MOFA will be inductively set and is therefore critical to the Crusader 155mm self-propelled howitzer system automated ammunition handling capability, allowing Crusader to meet rate of fire (10-12 rounds/min) requirements. The Portable Inductive Artillery Fuze Setter (PIAFS) is being developed to allow non-Crusader equipped artillery units to inductively set the MOFA.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 3898 Designed enhancements and updates ■ 310 Portable Inductive Artillery Fuze Setter (PIAFS) Development ■ 850 Continued program management and management engineering services ■ 1350 Conducted PPQT testing XM773 and XM782 testing Total 6408 <p>FY 1998 Planned Program: Project not funded in FY98</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> ■ 1550 Design enhancements and qualification builds, XM782 (Contract Task VI) ■ 1200 Portable Inductive Artillery Fuze Setter (PIAFS) Development ■ 550 Program management and management engineering services ■ 1200 Engineering test support, PPQT and PIAFS testing Total 4500

Mission Description and Budget Item Justification: This Program Element (PE) supports the development of new, advanced combat engineer systems that will have mobility characteristics comparable to the maneuver forces supported. The programs included in this PE are the Grizzly (M1 Breacher) and the Wolverine (Heavy Assault Bridge). The Grizzly base vehicle is an M1 Abrams Tank chassis whereas the Wolverine base vehicle is the M1A2 SEP Abrams Tank chassis. The Grizzly will integrate a versatile/survivable full-width mine clearing blade with automatic depth control, a power driven arm, and an armored commander's control station on the chassis. The Wolverine will integrate a bridge capable of supporting Military Load Class (MLC) 70 loads and a software controlled launching mechanism. All projects in this PE support efforts in the Engineering and Manufacturing Development (EMD) phase of the life cycle acquisition strategy, and are correctly located in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604649A Engineer Mobility Equipment Development				PROJECT DG25													
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost												
DG25 M1 Breacher	31304	38521	51420	58745	39210	19294	0	0	244752												
<p>A. <u>Mission Description and Justification:</u> The Grizzly (M1 Breacher) will provide the Combat Engineer with significantly improved mission effectiveness and crew/vehicle survivability while clearing minefields and removing complex natural and man-made obstacles at the forward edge of the battlefield. The Grizzly will be capable of moving with, and be as survivable as, the force it is supporting. The system provides a critical resource for executing in stride breaches, supporting the Force XXI maneuver commander's goals of information and maneuver dominance on the battlefield. The Grizzly, a single, survivable breach platform, gives the Combat Engineer a capability that does not currently exist in today's complex obstacle breaching operations, and will facilitate successful execution of ground combat mission requirements by maneuver forces. Funding in this phase supports vehicle system technical evolution to meet operational requirements prior to production, production planning, and government testing prior to a Milestone III decision. Additionally, funding supports the development of training devices. The Grizzly Training Aids, Devices, Simulators, and Simulations (TADSS) are the tools for life-cycle training of Grizzly operators, maintainers, and leaders. The Grizzly TADSS will support individual, collective and combined arms training at the institutional level and unit level. The computer-based TADSS will optimize training effectiveness at reduced institutional and unit OPTEMPO costs.</p> <p><u>Acquisition Strategy:</u> Research and development efforts have leveraged the accomplishments of the Combat Mobility Vehicle Advanced Technology Transition Demonstrator (CMV-ATTD) contract. Design modifications were written into the Advanced Development contract for the powertrain and other chassis components/systems necessary to insure that the Grizzly meets the mission profile required by the Operational Requirements Document. Through the production buy the vehicle will be sole sourced to United Defense Limited Partnership (UDLP), Ground Systems Division, York, PA. The contracts for training devices development and production will be awarded by STRICOM with maximum use of existing commercial off-the-shelf hardware and software.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">24994</td> <td>Performed Design Refinement and Prototype Refurbishment</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">4271</td> <td>Conducted Logistics Analysis, Component Testing and Simulation</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">2039</td> <td>Provided Government and Contractor Program Management to include Contract Administration, Sub-contracts Administration, Program Analysis, and Earned Value Management Systems (EVMS)</td> </tr> <tr> <td colspan="3" style="padding-top: 10px;"> Total 31304 </td> </tr> </table>										■	24994	Performed Design Refinement and Prototype Refurbishment	■	4271	Conducted Logistics Analysis, Component Testing and Simulation	■	2039	Provided Government and Contractor Program Management to include Contract Administration, Sub-contracts Administration, Program Analysis, and Earned Value Management Systems (EVMS)	Total 31304

DG26 Heavy Assault Bridge	11921	11661	10157	169	0	0	0	0	88220
<p>A. Mission Description and Justification: The Wolverine will provide Military Load Class (MLC) 70 vehicles the capability to cross 24-meter gaps (26-meter bridge). The Wolverine will have mobility characteristics comparable to the maneuver forces it will support. The launch time for the bridge will be five minutes or less; the retrieval time will be a total of ten minutes or less which includes five minutes to engage plus five minutes to place the vehicle in a travel mode. The base for the Wolverine is an M1A2 SEP Abrams Tank chassis. The Wolverine Training Aids, Devices, Simulators, and Simulations (TADSS) are the tools for life-cycle training of Wolverine operators, maintainers, and leaders. The Wolverine TADSS will support individual, collective, and combined arms training at the institution and unit level. The computer-based TADSS will optimize training effectiveness at reduced institutional and unit OPTEMPO costs.</p> <p>Acquisition Strategy: Side-by-side Demonstration Testing was completed in FY 1993 on three different prototype bridges and launchers for Phase I of Engineering and Manufacturing Development (EMD). As a result of the testing and submission of proposals, one contractor, General Dynamics Land Systems Division (GDLS), was selected to complete Phase II of EMD with a Cost-Plus-Award-Fee contract. A contract was awarded in FY 1996 for two Wolverine systems, with an option for four additional systems exercised in December 1996 that will complete development testing. Follow-on Fixed Price contracts will be awarded for LRIP and Production requirements. STRICOM will award contracts for the development of training devices.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 7773 Engineering Development Contract for migration to Abrams System Enhancement Program and Test Program Sets (TPS) development ■ 622 Completion of EMD II Contract ■ 1083 Completed PQT/Began Live Fire (Phase I) ■ 21 Various Engineering Services Contracts ■ 1902 Contractor Support of Test ■ 520 Program Management Total 11921 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 512 Contractor Support For Test ■ 5787 Developmental Contract ■ 602 Program Management ■ 4064 Start Live Fire Test and Purchase System Support Package

DL74 Long Range Advanced Scout Surveillance System (LRAS3)	7122	11628	9978	0	0	0	0	0	28728

Mission Description and Budget Item Justification: This program element provides night vision technologies required for U.S. defense forces to engage enemy forces twenty-four hours a day under conditions with degraded visibility due to darkness, adverse weather and battlefield obscurants. Developments and improvements to high performance night vision electro-optics, radar, laser, and thermal systems integration of related multi-sensor suites will enable near to long range target identification, acquisition and engagement to include significant fratricide reduction which will improve battlefield command and control in “around the clock” combat operations. Project DL69 is focused on inserting key Horizontal Technology Integration Second Generation Forward Looking Infrared (HTI SGF) (FLIR) thermal sensor technology into common battle groups. Project DL70 focuses on night vision electro-optical, laser, and other target identification and location equipment for use by individual soldiers and a variety of platforms. In addition to the Lightweight Laser Designator Rangefinder (a Warfighter Rapid Acquisition Program), this project includes HTI laser evaluation and assessment, and integrates individual sensors into a common architecture. Project DL74 focuses on a long range multi-sensor system utilizing Horizontal Technology Integration Second Generation Forward Looking Infrared (HTI SGF) (FLIR) thermal sensors and other technologies, for use by US Army scouts at extended ranges beyond the Abrams and Bradley capabilities. The LRAS3 will provide the scouts with their first reconnaissance and surveillance system with a twenty-four hour, all weather capability which is mounted or man-portable. The projects in this PE support development efforts in the engineering and manufacturing development phases of the acquisition strategy and therefore are correctly placed in Budget Activity 5.

DL69 Horizontal Technology Integration Second Generation FLIR (HTI SGF)				13217	11037	0	0	0	0	0	0	90233
<p>A. Mission Description and Justification- Horizontal Technology Integration Second Generation Forward Looking Infrared (HTI SGF) (FLIR) will enable the Army to insert key thermal sensor technology into the highest priority forces [the M2A3/M3A3 Bradley Fighting Vehicle System (BFVS), the Long Range Advanced Scout Surveillance System (LRAS3), and the M1A2 System Enhancement Package (SEP) Abrams]. The HTI SGF will allow all vehicles in a common battle group to see the same thermal image. The HTI SGF development is in two parts, an "A" kit, which is specific to the vehicle, and includes integration and installation, and a "B" kit, which includes the common FLIR sensor and display. Funds in this project will develop the "B" kit for all weapon systems employing the HTI SGF.</p> <p>Acquisition Strategy: The common Second Generation FLIR sensor and display "B" Kit are being developed and fabricated using a competitively awarded cost plus award fee contract.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> █ 12031 Completed development and fabrication of SGF "B" kit for M1A2 SEP and M2A3/M3A3. █ 286 Completed sight level qualification testing of EMD prototypes for HTI SGF. █ 900 Aviation "B" Kit Trade Studies. <p>A. <u>Mission Description and Justification:</u> Night Vision Devices Engineering Development: This project develops and improves high performance night vision electro-optics, thermal and laser systems, and systems integration of related multi-sensor suites to enable near to long range target acquisition and engagement as well as improve battlefield command and control in “around-the-clock” combat operations. The Lightweight Laser Designator Rangefinder (LLDR) was approved as a two year Warfighting Rapid Acquisition Program (WRAP) initiative for which funding was provided (\$5000K) in FY97 to enter a thirty month Engineering and Manufacturing Development Phase. LLDR is a day/night manportable modular target location and laser designator system. The target location system combines a State-Of-The-Art “See Spot” Forward Looking Infrared (FLIR), eyesafe laser rangefinder, compass and vertical angle measurement, and global positioning system (GPS) and required processing capability to export target location data through a digital interface. The modular laser designator will be able to target enemy assets for laser-guided ground and air-launched munitions. LLDR will provide the artillery light forces with the capability to detect, recognize, identify, determine location and either digitally pass this information on to coordinate indirect fire or designate the target for precision destruction by smart munitions. Improvements to the Thermal Weapon Sight (TWS) and the Driver’s Vision Enhancer (DVE) are developed under this project. The architecture for interoperability of sensors [Mini-Eye Safe Laser Infrared Observation Set (MELIOS), LLDR, Target Location Observation System (TLOS), Lightweight Video Reconnaissance System (LVRS), TWS, DVE, Long Range Advanced Scout Surveillance System (LRAS3), Synthetic Aperture Radar (SAR), Infrared Line Scanner (IRLS), Forward Looking Infrared (FLIR), visible imagers, hyperspectral cameras and Moving Target Indicator (MTI) radars] on the digital battlefield, will be developed through an integrated sensor suite program. This will facilitate the merging of existing sensor data for digital distribution within the Joint Technical Architecture-Army. Sensor data distribution activities include the development and promulgation of a common device architecture, and a computer-based system which will test the flow of data from the sensor, through a variety of computing devices and then out over the communications network. Activities also include the integration, testing and demonstration of multi-sensor systems and the integration of ground-based sensors into long-range surveillance systems. The multispectral target acquisition capabilities will developed, evaluated and inserted incrementally into ongoing production efforts. Efforts include Image Intensified photo cathode development in support of an eye-safe laser system, and evaluation of the suitability and technology supporting a common, HTI, laser system which could be used in a variety of ground and air platforms. PROFILER targeting aid development will upgrade the AN/TQM-41 Meteorological Measuring Set by integrating radar and microwave satellite technology to provide “on demand” trajectory and target area weather conditions. This will increase the ability of artillery/rocket forces to project lethality further into the battlespace.</p> <p><u>Acquisition Strategy:</u> The development programs in this project are currently all based on competitive awards and under cost reimbursment type contract.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 356 Completed development of TLOS-related prototypes incorporating results from COTS evaluation and studies. ■ 1020 Conducted HTI Laser trade studies to support developmental/COTS/NDI Integration program.

Mission Description and Budget Item Justification: Supports Engineering and Manufacturing Development (EMD) and Non-Developmental Item (NDI) evaluation of unit/organizational equipment, weapons/munitions, clothing and individual equipment, fabric shelters, field service equipment, food and food service equipment to enhance soldier efficiency, effectiveness, lethality, sustainability and survivability. New food items and food service equipment will be developed to reduce food service logistics requirements for all four Services. The organizational equipment program supports development of a new generation of field service support items: small, large and collective protective shelters; decontamination items; and improved space heaters to shelter and sustain the soldiers in the field and improve quality of life. The Land Warrior program will produce the first fully integrated fighting system for dismounted combat soldiers. The Soldier Enhancement Program provides "soldier items" that can be procured in three years or less. The projects in this Program Element support research efforts in the Engineering and Manufacturing Development phase of the acquisition cycle and are therefore correctly placed in Budget Activity 5.

- 1784 Fabricate test items and initiate the DT/OT of the MBA and MLS.
- 179 Procure prototypes for a wear test and acceptability evaluation of the Women's Coat, and Physical fitness Uniform

FY 1998 Planned Program: (continued)

- 577 Complete redesign testing and staff MSIII document for ITAP
 - 176 PM-Management
 - 87 Small Business Innovative Research/Small Business Technology Transfer
- Total 3571

FY 1999 Planned Program:

- 620 Complete DT/OT and assessment reports for the MBA and MLS and obtain MSIII approval.
 - 305 Conduct a wear test and acceptability evaluation of the Women's Coats.
 - 821 Modify designs, procure test prototypes, and initiate the DT/OT of the Combat Clothing Product Improvement.
 - 900 Modify designs, procure test prototypes, complete DT/OT, obtain MS III approval of the Concealable Body Armor.
 - 500 Complete test of the Advanced Bomb Suit, obtain MS III approval and transition to procurement.
 - 1205 Develop initial designs, conduct early user evaluation, refine designs for Climate Control Equipment (heating and cooling) for the individual soldier.
- Total 4351

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D667 Land Warrior	50628	37826	39960	16999	15757	13972	14179	Continuing	Continuing
<p>A. Mission Description and Justification: Land Warrior (LW) is an integrated fighting system for dismounted combat soldiers. The LW program will enhance the soldier's battlefield capabilities through the development and integration of an assortment of Army systems/components and technologies into a cohesive, timely, and combat effective system. These systems/components include: modular weapon system with thermal weapon sight, infrared aiming light, laser rangefinder, digital compass, video camera, and close combat optic; integrated headgear with helmet mounted display and image intensifier; enhancements to protective clothing and individual equipment; and an integrated individual soldier computer/radio. LW will bring the dismounted soldier into the digital battlefield.</p> <p>Acquisition Strategy: The LW Engineering and Manufacturing Development (EMD) program is designed to field existing/mature technologies to meet soldier requirement deficiencies. The Force XXI Land Warrior program will develop advanced technology components for insertion into the LW consolidated program. An Integrated Product Team (IPT) was formed to determine which technologies from the Science and Technology (S&T) program will be integrated into the LW EMD program. An LRIP option, sole source contract, will be exercised to provide the required number of systems to meet the First Unit Equipped (FUE) date of 4Q00. A full production competitive contract will be awarded upon completion of successful Milestone III (1Q00).</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 7480 Fabricated LW prototypes for Development Testing (DT) and procure long lead items for Operational Testing. ■ 12756 Conducted LW Early Operational Exercise (EOE), contractor and government testing, and prepare test support package. ■ 9476 Fixed deficiencies resulting from Early Operational Exercise (EOE), contractor testing, finalize LW hardware/software design/integration, contract award fee. Ensured contractor and government compliance with Joint Technical Architecture-Army. ■ 14120 Developed LW functional plans: Integrated Logistics Support (ILS), configuration management, etc., published LW draft system manuals; conducted risk reduction efforts and Preliminary and Critical Design Reviews. ■ 6796 Program management and engineering support from other government agencies to provide oversight of contractor effort. Total 50628 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 7756 Contractor program management, complete Production Qualification Test-Contractor (PQT-C); fix deficiencies, and conduct IV&V of software.

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D668 Soldier Enhancement Program	15784	14114	14702	14866	14942	14805	14959	Continuing	Continuing

A. Mission Description and Justification: The objective of the Soldier Enhancement Program (SEP) is to increase the lethality, command and control, sustainability, mobility, and survivability of the soldier through accelerated acquisition of lighter, more lethal weapons and improved "soldier items" including lighter, more comfortable load-bearing equipment, field gear, survivability items, communications equipment, and navigation aids. For SEP purposes, soldiers are managed in three categories: dismounted soldiers, combat crews (air and ground), and other soldiers. Projects generally take three years to complete.

Acquisition Strategy: SEP procurement consists of Non-Developmental Items (NDI) or modified NDI that can be fielded in three years or less. Items that require more than three years development are pursued under the appropriate system area. SEP items are reviewed and approved for development one year and begin development during the next year. Procurement varies by appropriation.

FY 1997 Accomplishments:

- 1732 Completed development/type classification: Modular Weapon System, M4 Improved Buttstock, Shoulder Holster for 9MM Pistol (Left/Right Handed), Lightweight Chemical Overgarment, Shin/Knee Guards for Riot Control, Combat Medic Vest, Compression Sack, Improved Flotation Device, Small Unit Shower, Individual Soldier Radio and Blacklight.
- 3633 Continued development/procured prototypes and/or test: Non-Lethal 40MM Grenade, Non-Lethal 5.56MM Cartridge, XM 25 Stabilized Binoculars, Machine Gun Optics, Anti-Reflection Device, XM94 Stun Grenade, Mid Sized Riot Control Dispenser and Fighting Position Revetment.
- 7186 Initiated market surveys and/or developed: Heavy Sniper Weapon System, M249 Flexmount, Weapon Flashlight, Iron Sight, Close Quarters Battle Sling, 12 Gauge Non-Lethal Point and Crowd Control, 40mm Canister Rounds, IR Illumination Hand Grenade, M249 Feed Tray Cover, M4 Improved Buttstock, Blast Protective Boots, Knee and Elbow Pads, Ballistic Shin Guards, Equipment Belt Extender, Improved Underlying Insulating Layers for Extended Cold Weather Clothing System (ECWCS), Extreme Cold Weather Boot, Ballistic/Non-Ballistic Face and Body Shield, Fuel Bar, Modular Load Bearing Equipment, Low Profile Flotation Collar, and Emergency Breathing Device, Tuff Ties, MP Combat/Law Enforcement Ensemble, Improved Combat Shelter, Multi Purpose Cart, and Canteen Insert Water Purifier.
- 793 Terminated/Suspended/On-Hold: Canteen Cup Cooler, On the Move Hydration, Alternate Wear Hot Weather Boot, Physical Fitness Uniform, Enhanced Incendiary Grenade, Weapons Flashlight, Accessory Shotgun for Rifles/Carbines, and Boresights for Aimlights and Thermal Systems (BATS).
- 2440 Program Management.

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost																								
D680 Mounted Warrior	0	1945	185	183	874	568	0	Continuing	Continuing																								
<p>A. <u>Mission Description and Justification:</u> Mounted Warrior (MW) is an integrated modular system that will enhance the combat crewman's fighting capabilities. The MW system will be used by a wide variety of combat crewmen and will be tailored based on Mission, Enemy, Terrain/Weather, Troops Available and Time (METT-T). The physical burden imposed by cumbersome personal equipment can degrade a crewman's effectiveness by increasing rates of fatigue, reducing mobility and restricting his ability to perform mission functions. Consideration will be given to optimizing the balance between vehicle mounted and crewman mounted equipment and designing an overall system that will improve the crewman's endurance, safety, mission performance and crewman/vehicle interface. The MW system will provide hands free, tetherless communications; increased laser eye protection; maximum individual protection from Nuclear, Biological, and Chemical (NBC) contamination, spall, flame and heat, and better performance of crew tasks without reducing tactility and agility.</p> <p><u>Acquisition Strategy.</u> The MW program fields currently existing/mature technologies to meet the needs of the Combat Vehicle Crewman (CVC).</p> <p>FY 1997 Accomplishments: Project not funded in FY 97</p> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">393</td> <td>Conduct trade off determinations and analysis to identify near and far term products and technologies.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">788</td> <td>Leverage Land Warrior components for concept experimentation.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">342</td> <td>Procure hardware to support early concept experimentation program of MW unique components.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">373</td> <td>Program Management and engineering support for program and requirements definition and documentation.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">49</td> <td>Small Business Innovation Research/Small Business Technology Transfer programs.</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>1945</td> </tr> </table> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">185</td> <td>Program Management and engineering support for program and requirements definition and documentation</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>185</td> </tr> </table>										■	393	Conduct trade off determinations and analysis to identify near and far term products and technologies.	■	788	Leverage Land Warrior components for concept experimentation.	■	342	Procure hardware to support early concept experimentation program of MW unique components.	■	373	Program Management and engineering support for program and requirements definition and documentation.	■	49	Small Business Innovation Research/Small Business Technology Transfer programs. Mission Description and Budget Item Justification Program Element funds engineering development of Non-System Training Devices to support force-on-force training at the Combat Training Centers (CTC), general military training and training on more than one item/system, as compared with system devices which are developed in support of a specific item/weapon system. Training devices and training simulations help to modernize the forces while providing force multipliers that improve combat effectiveness by providing realistic training while helping to control rapidly escalating costs. Training devices maximize the transfer of knowledge, skills, and experience from the training situation to a combat situation. Force-on-force training at the National Training Center (NTC), Ft. Irwin, CA; Joint Readiness Training Center (JRTC), Ft. Polk, LA, and Combat Maneuver Training Center (CMTC), Hohenfels, Germany; and battle staff training in Battle Command Training Program (BCTP) will provide increased combat readiness through realistic collective training in low, mid, and high intensity scenarios. Project D241, Non-System Training Devices-Combined Arms, develops simulation training devices for Army-wide use, including the CTCs. Project D396, WARSIM Intel Module, is the intelligence driver for Warfighter Simulation 2000 (WARSIM). Project D573, STRICOM/Naval Air Warfare Center Training Systems Division (NAWCTSD) Support, funds in-house costs of project support by US Army Simulation, Training and Instrumentation Command (STRICOM) and NAWCTSD. This Program Element supports research efforts in the engineering and manufacturing development phase of the acquisition cycle and is therefore correctly placed in Budget Activity 5.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604715A Non-System Training Devices - Engineering Development				PROJECT D241	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D241 Non-System Training Devices Combined Arms	33455	67229	48661	44505	33081	24369	36244	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> D241 - NSTD Combined Arms: This project is used to develop prototype training devices to support Combined Arms (Infantry, Armor, Aviation, Air Defense, Artillery, Engineer, Chemical, and Support troops) training and multi-system training within the Army, to include the Reserve Components. Corps Battle Simulation (CBS) is the Army's standard command and staff training simulation at the corps/division level. WARSIM will be the next generation battle simulation to replace CBS, Brigade/Battalion Battle Simulation (BBS), Tactical Simulation (TACSIM) and Combat Service Support Training Simulation System (CSSTSS). WARSIM will utilize current technology to efficiently provide training support and linkage to other simulations and simulators. WARSIM will comply with Simulation Interoperability Standards Organization (SISO) standards and open architecture to meet the Army's training requirements into the next century, to include High Level Architecture (HLA) compliance. WARSIM is also the land component element of the Joint Simulation System (JSIMS), which is a joint initiative managed by the JSIMS Joint Program Office. The Fire Support Combined Arms Tactical Trainer (FSCATT) provides for initial and sustainment gunnery training, and can be linked as part of the CATT family. FSCATT is designated as the Army's only Defense Acquisition Pilot Program IAW the Federal Acquisition Streamlining Act (FASTA). The Engagement Skills Trainer (EST) provides individual and squad level home station training with a deployable small arms engagement trainer, resulting in a significant savings in ammunition costs. This project funds the development of training devices, simulators, simulations and instrumentation for the Combat Training Centers (CTC's); Joint Readiness Training Center Military Operations in Urban Terrain (JRTC MOUT) for training in a realistic MOUT environment; Combat Training Center Opposing Forces (OPFOR) Surrogate Tracked Vehicles (STV) modernization to simulate the T-80 Main Battle Tank at the NTC, JRTC and CMTC; National Training Center Objective Instrumentation System (NTC OIS) to provide a completely digital based system for full tactical system connectivity and Distributed Interactive Simulation (DIS) compatibility. The Combat Synthetic Training Assessment Range (CSTAR) is a battle command training system that provides collective training for brigade-sized organizations at the National Training Center. CSTAR was approved as a two year Warfighting Rapid Acquisition Program (WRAP) effort. Devices developed will enable the Army to train units collectively to obtain synergistic results through the employment of weapons and support systems in their respective battlefield roles.</p> <p><u>Acquisition Strategy:</u> Competitive development efforts leading to competitive procurement against performance specifications.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 22120 Continued development of WARSIM 2000 to include System Requirements Analysis, Software Requirements Analysis and System Design. ■ 4365 Completed development of FSCATT Phase I. ■ 3204 Continued limited enhancements to CBS. ■ 2650 Continued development of devices, simulators and simulations to support training at Combat Training Centers to include JRTC MOUT Phase II. ■ 1116 Initiated development of Combat Synthetic Training Assessment Range.

PROJECT

D241

Total 33455

FY 1998 Planned Program:

- 38452 Complete Spiral Build 1 and approximately 50% of Spiral Build 2 software development for WARSIM 2000.
- 1046 Initiate development of Engagement Skills Trainer.
- 15123 Continue development of devices, simulators and simulations to support training at Combat Training Centers to include JRTC MOUT Phase II (3025), CTC OPFOR Tracked Vehicles (9880), NTC OIS (1947) and CTC Digitization (271).
- 2310 Continue limited/high priority refinements to CBS Source Code, to support major training exercises (i.e., Prairie Warrior).
- 3387 Continue the Battle Lab Reconfigurable Simulator.
- 5226 Continue development of Combat Synthetic Training Assessment Range.
- 1685 Small Business Innovative Research/Small Business Technology Transfer Programs.

Total 67229

FY 1999 Planned Program:

- 34568 Complete Spiral Build 2 and majority of Spiral Build 3 software development for WARSIM 2000 and deliver software required for JSIMS Initial Operational Capability.
- 4557 Continue development of Engagement Skills Trainer.
- 1400 Continue limited /high priority refinements to CBS Source Code, to support major training exercises (i.e., Prairie Warrior).
- 8136 Continue development of devices, simulators and simulations to support training at the Combat Training Centers, to include JRTC MOUT Phase II, NTC OIS and CTC Digitization

Total 48661

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	6969	2825	2999	5059	4065	5943	5133	Continuing	Continuing
D579 Field Army Map Sys Eng Dev	6969	2825	2999	5059	3606	5186	4393	Continuing	Continuing
D598 High Volume Map Production Equip (HVMPE)	0	0	0	0	459	757	740	Continuing	Continuing

Mission Description and Budget Item Justification: Combat Terrain Information Systems (CTIS) provide automated terrain analysis and reproduction in support of Intelligence Preparation of the Battlefield (IPB), Command and Control, Terrain Visualization, weapons and sensor systems, and other topographic information customers. CTIS consists of two versions of the Digital Topographic Support System/Quick Response Multicolor Printer (DTSS/QRMP) [i.e., HMMWV (Light) and 5-ton (Heavy)], the DTSS-Multispectral Imagery Processor (DTSS-MSIP), and the High Volume Map Production Equipment (HVMPE). Additionally, HQDA directed the acquisition of the Topographic Imagery Integration Prototype (TIIP). The Project Director for CTIS (PD CTIS) is responsible for developing, procuring, and fielding of topographic support systems for the Army. In addition, a Pre-Planned Product Improvement (P3I) program will be conducted to enable technology insertion (e.g., improved Army Battle Command Systems (ABCS) interoperability, automated feature extraction, improved tactical decision aid functionality), as well as the cyclic upgrade of Commercial Off-the-Shelf equipment. PD CTIS has management responsibility for planning system integration and execution of assigned products from development through hand-off to the Readiness Command. The DTSS/QRMP, DTSS-MSIP, and TIIP fall under the Field Army Mapping System Engineering Development (D579) project. The HVMPE falls under the D598 project. The projects in this program element (Terrain Information - Engineering Development) support research efforts in the Engineering and Manufacturing Development (EMD) phases of the Acquisition Strategy and are therefore correctly placed in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604716A Terrain Information - Engineering Development (TIARA)				PROJECT D579	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D579 Field Army Map Sys Eng Dev	6969	2825	2999	5059	3606	5186	4393	Continuing	Continuing
<p>A. <u>Mission Description and Budget Item Justification:</u> This program element funds development of the Digital Topographic Support System/Quick Response Multicolor Printer (DTSS/QRMP). The current terrain analysis, topographic and reproduction support provided by Army Engineer Terrain Teams is a slow, labor intensive process that does not meet the needs of the Force XXI battlefield in which the commander must have the ability to rapidly obtain terrain information and topographic products. The Combat Terrain Information Systems (CTIS) Modernization Plan stated the requirement to proceed immediately with the Downsized DTSS and further identified that QRMP functionality would be incorporated into the DTSS for a single integrated terrain analysis and reproduction capability. It has been determined that the downsized (Light) capability is now more appropriate to support contingency operations, operations other than war, and split based operations. The DTSS/QRMP will be deployed at Division, Corps, and EAC in support of these missions. The DTSS/QRMP will automate the updating and processing of terrain information into terrain analysis products, provide rapid reproduction of low volume, up-to-date, large format, full color imagery maps, situation overlays, special graphics (e.g. captured enemy maps) and other topographic and terrain products. Using the most current technology available, the functional capabilities of DTSS and QRMP will be developed into a single interoperable architecture. Part of imagery exploitation includes the development of a Multi-Spectral Imagery Processor (MSIP), which provides an image map making capability. Due to current world events and the possibility of contingency missions in areas where standard map products are not available, image map production has become an urgent need.</p> <p><u>Acquisition Strategy:</u> The Acquisition Strategy being pursued for the DTSS/QRMP (Light) EMD phase is to utilize Army standard equipment and the Common Hardware/Software (CHS) computer workstations in conjunction with non-development item (NDI) components to develop an integrated baseline hardware configuration. The Combat Terrain Information Systems (CTIS) System Engineering and Integration (SE&I) contractor is executing EMD phase, performing system integration, and has provided units for formal test and evaluation. Acquisition of the MSIP was completed in FY 1996. Based upon CINC, TRADOC and PEO C3S User Evaluation approvals, the MSIP will be Type Classified - Standard and added to the gaining unit's Table of Organization and Equipment. The acquisition of the MSIP relied upon existing contracts and commercial-off-the-shelf to the fullest extent possible. Existing DTSS units are being upgraded to a 5-ton ISO 20 foot shelter configuration. The upgraded 5-ton systems will provide an integrated DTSS/QRMP (Heavy) capability while preserving the Army's investment in the DTSS. Program Management responsibility and milestone decision authority have been assigned to the Program Executive Officer for Command, Control, and Communications Systems (PEO C3S). Project management is provided by the Project Director (PD) for Combat Terrain Information Systems. The contracting strategy for the DTSS/QRMP (Light) program is to execute the EMD phase through the current SE&I contractor, Lockheed Martin Corporation. A Competitive Cost Plus Fixed Fee (CPFF) contract was awarded for the CTIS SE&I contract. A competitively awarded, Firm Fixed Price (FFP) contract is anticipated for the Full Rate Production of the downsized DTSS/QRMP (Light). Upgrades to the existing DTSS units will also be accomplished through a production contract with Lockheed Martin Corporation. The computer workstations for CTIS programs are being procured through the PM for Common Hardware and Software.</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604726A Integrated Meteorological System (IMETS) (TIARA)				PROJECT DD85	
COST <i>(In Thousands)</i>	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DD85 Integrated Meteorological System (IMETS)	0	1887	1790	2192	1669	1774	1735	13279	33926

A. Mission Description and Budget Item Justification: This program element, Integrated Meteorological System (IMETS), funds the development of the IMETS evolving upgrades to the fielded IMETS, integrating the Defense Information Infrastructure (DII) and Common Operating Environment (COE). The IMETS is a mobile tactical automated weather data receiving, processing, and dissemination system designed to provide timely weather and environmental effect forecasts, observations, and decision aid support to the Army. The IMETS is an Army-furnished system consisting of a standard shelter and vehicle, and Army Common Hardware and Software of the Army Battle Command System which will be operated by Air Force weather personnel and maintained within planned Army support for systems and components IAW AR115-10/AFR 105-3. It is essential that the battlefield commander be provided the most accurate and timely weather data for his intelligence preparation of the battlefield. IMETS is the first link in providing this data. This project supports research efforts in the engineering and manufacturing development phase of the acquisition cycle and is therefore correctly placed in Budget Activity 5.

Acquisition Strategy: The IMETS Block III development program will build on the Block II initiative including conversion to the DII and the Army C4I Technical Architecture. The IMETS NDI acquisition strategy has proven successful in the fielding of twenty systems since program initiation in FY92. This development strategy will be continued to include software modules as they mature and become part of the COE library. A common map server update is of primary focus along with increased user distributed communication environment interoperability. Weather tactical decision aid upgrades and updated forecaster aids will be developed to include products from the Air Force initiative called the High Resolution Weather Satellite Receiver, the Small Tactical Terminal for Defense Meteorological Satellite Program (DMSP) and high resolution domestic and foreign weather satellite data. Weather Application modules from the Army Research Laboratory will be integrated and fielded as a capability upgrade to the current software baseline.

FY 1997 Accomplishments: Project not funded in FY97

FY 1998 Planned Program:

█	1163	Develop, investigate and apply advanced technologies to the IMETS prototype for expanded capabilities and performance in the areas of battlescale forecast modeling, Integrated Weather Effects Decision Aid, Vis5D, Target Area Met, thunderstorm and turbulence model, and weather overlays on ATCCS SITMAP
█	676	Evaluate, configure and integrate high performance expanded tech base prototype capabilities into operational IMETS prototypes

D702 Common Integrated Broadcast Service-Modules	4588	4360	4447	4426	4409	0	0	0	22369
<p>A. Mission Description and Budget Item Justification: The Integrated Broadcast Service (IBS) is the worldwide, DoD standard network for transmitting tactical and strategic intelligence and targeting data. The Common Integrated Broadcast Service - Modules (CIBS-M) Joint Program (all services and SOCOM) was created to consolidate and replace existing IBS receiver functionality/capability, inherent with the duplicative existing systems, with a “common family” of IBS modules (both hardware and software). This is required to implement the IBS plan and consolidate/eliminate duplication of effort previously spread across multiple PEs/SSNs DoD wide. This program funds design, development, test and evaluation of initial CIBS hardware and software modules, as well as implementing performance expanding modifications to the family of CIBS-M equipment. This program element supports development efforts in the Engineering and Manufacturing development phases of the Acquisition Strategy and is therefore, correctly placed in Budget Activity 5.</p> <p>Acquisition Strategy: The CIBS-M family of modules will be the sole provider of IBS Modules to a variety of IBS receivers across all DOD component agencies. The Joint Program will competitively develop hardware and software modules and procure the required modules for integration into host receiver systems. Additionally, this line provides for necessary modifications to IBS modules as the broadcast networks continue to evolve and modify their formats and protocols.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 2990 Space Warfare Systems Command (SSC) S/W Study (S/W & Configuration Management Plan ■ 980 Initial Module Development Planning, Host Integration/Configuration Management ■ 443 Tactical Integrated Broadcast Service (TIBS) Certification Testing ■ 175 CTT/MATT Modeling & Simulation Support Total 4588 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 1450 CIBS-Module prototype design) ■ 1644 CIBS-Module Development) ■ 1157 Design/Develop CIBS Interface to Commanders Tactical Terminal (CTT) and Multi Mission Advanced Tactical Terminal (MATT)) ■ 109 Small Business Innovative Research/Small Business Technology Transfer Programs Total 4360

<p>A. <u>Mission Description and Justification:</u> Project D126 - FAAD Command and Control Eng Dev: The Forward Air Defense Command and Control (FAAD C2) System is an automated system deployed with FAAD weapons to provide accurate and timely command, control and targeting information for the weapon systems. The system utilizes non-developmental item sensors, computers, displays and interface hardware integrated with data communication equipment. It automates mission related functions and uses the Single Channel Ground and Airborne Radio Systems (SINCGARS) for voice and the Army Data Distribution System (ADDS) for data.</p> <p><u>Acquisition Strategy:</u> The acquisition strategy relies heavily on non-developmental items (NDI) and evolutionary software development to rapidly overcome our current air defense command, control and intelligence deficiencies and to keep pace with the advancing technologies. The concept of evolutionary software development is being followed and will be accomplished in Blocks - I, II, III and IV. Blocks I and II have been completed. Block III is currently being developed.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> █ 1877 Conducted Block III V4.R Integration, Assembly, and Test (IA&T) and System Certification Test (SCT) █ 17600 Continued Block III Software Development █ 100 Prepared for Block III Development Test (DT) Total 19577 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> █ 2499 Digitization integration █ 14447 Continue Block III development █ 3791 SENTINEL GBS █ 444 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR) Total 21181 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> █ 100 System Certification Test █ 3251 Complete Block III SW development █ 3125 Digitization integration Total 6476

**0604746A Automatic Test Equipment
Development**

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	8868	8220	7030	7424	6749	7740	7222	Continuing	Continuing
DL59 Diagnostic/Expert System Development	8868	8220	4030	5424	6749	7740	7222	Continuing	Continuing
DL65 Calibration Sets Development	0	0	3000	2000	0	0	0	0	5000

Mission Description and Budget Item Justification: This program element provides for the development of automatic test equipment (ATE) to support the increasingly complex electronics of all Army weapon system commodities including armor, aviation, missile, and communications-electronics. The program focuses on test technologies which are common to multiple weapon platforms and are commercial state of the art to minimize the cost of troubleshooting and maintenance in the field. This program element further provides for the development of modular, reconfigurable automatic and semi-automatic systems to satisfy calibration and repair requirements of Army general purpose test, measurement, and diagnostic equipment (TMDE). The calibration mission covers all equipment commodities, including the most sophisticated TMDE, and requires capabilities to support state-of-the-art technologies. A rapidly deployable calibration set with emphasis on digital electronics and tailored to support Army field units will be developed to alleviate serious deployability and survivability shortfalls in the current systems. Expert systems and artificial intelligence applications are also being developed under this program element to support the Army strategy of improving the ability of weapon systems to help diagnose themselves through embedded sensors and built-in diagnostics. The goal of embedding diagnostics is to minimize the need for external testers and to improve the troubleshooting abilities of soldiers in the field. Emphasis will be on providing paperless maintenance manuals/procedures and battlefield electro-optics displays which will reduce the Army's investment in test program sets and in maintenance publications and procedures. These projects are appropriately assigned to Budget Activity 5 since they provide for engineering and manufacturing development of new ATE and calibration systems to meet the test, measurement, and diagnostic requirements of the Army's weapons and support systems, and for incorporation of modern technologies into the Army's ATE and calibration systems.

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DL59 Diagnostic/Expert System Development	8868	8220	4030	5424	6749	7740	7222	Continuing	Continuing
<p>A. <u>Mission Description and Budget Item Justification:</u> This project funds development of expert/diagnostic systems and general purpose test equipment. These systems and equipment are required to overcome existing deficiencies and voids in organic test and diagnostic capabilities and to ensure the operational readiness, accuracy, and effectiveness of the Army's weapons and combat support systems. The project provides for development of diagnostic technologies and state-of-the-art general purpose test equipment to support the Army's weapon systems, improvement of general purpose test equipment to meet new testing and technological requirements, market surveys of commercially available general purpose test equipment to determine applicability to Army requirements, evaluations and validations of diagnostic software on targeted hardware, and development/evaluation of test program sets (TPS) for use with standard automatic test equipment. Applications of state-of-the-art technologies in expert systems and artificial intelligence, paperless maintenance and troubleshooting manuals, electro-optics displays for battlefield use, and soldier-friendly equipment will be developed to meet identified requirements.</p> <p><u>Acquisition Strategy:</u> When the necessary expertise and capability are available within the Department of Defense, services are ordered from the government source; otherwise, commercial contracts are used. Equipment required for developmental projects is obtained by contract from the commercial supplier. Candidate non-developmental items and commercial equipment are identified and evaluated through market surveys and bid sample testing.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 1175 Tested new contact test set (Soldier Portable On-System Repair Tool) (SPORT) hardware and Apache cables. ■ 1607 Tested new state-of-the-art commercial equipment for use in Army test equipment programs. ■ 4700 Continued integration and testing of the Electro-Optics Test Facility. ■ 486 Continued development of the Failure Analysis and Maintenance Planning System for SPORT. ■ 500 Completed development of Kiowa Warrior electro-optic TPSs. ■ 400 Commenced development/rehost of Apache electro-optic TPSs. Total 8868 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 1500 Upgrade digital capability of Integrated Family of Test Equipment off-system tester to VXI (open architecture). ■ 2244 Modify Navy Consolidated Automated Support System electro-optics (EO) module for use in Army EO tester. ■ 1882 Complete integration and testing of the Electro-Optics Test Facility. ■ 1700 Complete development/rehost of Apache EO test program sets.

510 Test and evaluate a Society of Automotive Engineers J1939 data bus as a SPORT test capability.
 2497 Develop interface software needed by test program set developers to utilize Integrated Family of Test Equipment electro-optics test capabilities.
 1023 Evaluate Navy diagnostics for the SH-60 for application to Army UH-60 and review Marine Corps testing of real-time maintenance reporting.
 Total 4030

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY 1998/1999 President's Budget	9575	2582	2533
Appropriated Value	9793	8582	
Adjustments to Appropriated Value	-925	-362	
FY 1999 President's Budget	8868	8220	4030

Change Summary Explanation:

Funding: FY 1998 appropriated value +6000 Congressional increase; adjustment -362 undistributed Congressional reduction.

Funding: FY 1999 +1479 increase supports high priority software development requirement.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604746A Automatic Test Equipment Development				PROJECT DL65																
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost															
DL65 Calibration Sets Development	0	0	3000	2000	0	0	0	0	5000															
<p>A. Mission Description and Budget Item Justification: This project funds development of major program elements of the Army's next generation calibration set (CALSET 2000). A redesigned, rapidly deployable calibration set is required to overcome existing deficiencies and voids in organic calibration and repair capabilities. Experiences/lessons learned from Desert Shield/Desert Storm and from operations in Somalia and Bosnia have highlighted the need for a more mobile and upgraded calibration set. Primary needs are for an appropriate mobility footprint which will allow airlift via C-141 or C-130 aircraft, greatly reduced electromagnetic interference/radio frequency interference signature for operations on the modern digital battlefield, and enhanced battlefield mobility. The down-sized calibration set to be developed under this project will employ reconfigurable, open electronics architecture wherever feasible and will be housed in transport configurations appropriate for airlift via C-141/C-130 aircraft.</p> <p>Acquisition Strategy: When the necessary expertise and capability are available within the Department of Defense, services will be ordered from the government source; otherwise, commercial contracts will be used. Existing equipment and instrumentation and commercial off-the-shelf components will be used to the maximum extent possible. Development will be limited primarily to overcoming commercial market barriers (e.g., economic and packaging) rather than overcoming technology barriers.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">2125</td> <td>Initiate development of two prototypes combining the current AN/GSM-286 and AN/GSM-287 Calibration Sets into a downsized configuration.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">125</td> <td>Perform Manpower and Personnel Integration study of the prototype calibration set.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">500</td> <td>Acquire smaller and lighter high-precision calibration standards for technology insertion into the downsized equipment configuration.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">250</td> <td>Initiate development of software to link calibration set computers for interactive electronic technical manual, training, controls, and other applications.</td> </tr> <tr> <td colspan="2">Total</td> <td>3000</td> </tr> </table>										■	2125	Initiate development of two prototypes combining the current AN/GSM-286 and AN/GSM-287 Calibration Sets into a downsized configuration.	■	125	Perform Manpower and Personnel Integration study of the prototype calibration set.	■	500	Acquire smaller and lighter high-precision calibration standards for technology insertion into the downsized equipment configuration.	■	250	Initiate development of software to link calibration set computers for interactive electronic technical manual, training, controls, and other applications. DC77 Interactive Simulation	5421	8355	1380	2929	3411	8508	8508	0	Continuing
DC78 Computer Generated Forces	0	3877	1386	2961	3466	8678	17741	0	Continuing

Mission Description and Budget Item Justification: Distributed Interactive Simulation (DIS) is a synthetic environment within which humans may interact through a systematic connection of different subcomponent simulations, simulators and/or instrumented live task forces. These DIS components may reside at local and distributed locations, using various simulation hardware linked through use of a standard communication architecture. This Program Element provides for the engineering development and application of DIS technology to electronically link all subcomponents together to create a scaleable battlefield, both horizontally and vertically. The synthetic environment is used to verify the scenarios, tactics/techniques and procedures, train testers on new hardware/software and conduct trial test runs before costly live field tests. Project DC73, Synthetic Theater of War, supports engineering development and integration of the Synthetic Theater of War-Army (STOW-A). Project DC74, Developmental Simulation Technology, provides engineering development of DIS tools (e.g., Distributed Interactive Simulation Exercise Toolset (DISECT) for exercise management, techniques, standards and applications in support of the Army's Core DIS Facilities (CDF) at Forts Knox, Benning and Rucker, and the Operational Support Facility in Orlando, FL). Project DC77, Interactive Simulation, focuses on engineering development of techniques and technology for reconfigurable simulators operating in the DIS virtual environment and related simulations and simulator efforts. The FY98 program will provide a Reconfigurable Research and Development Simulation tool that will allow the battlelabs to accomplish their mission in support of the Advanced Concept & Requirements (ACR), Research, Development and Acquisition (RDA), and Training Exercise and Military Operations (TEMO) domains. The reconfigurable simulator program will provide tools to the Army's Battle Labs and Core DIS facilities to conduct experiments in all three domains. Project DC78 develops and upgrades computer generated forces software systems which support experimentation, concept evaluation, materiel development and training. Work done on this program will have benefit across the Army and DOD by providing standards for interoperability and software reuse in this emerging domain. This Program Element supports research efforts in the engineering and manufacturing development phases of the acquisition cycle and therefore is correctly placed in Budget Activity 5.

DC78 Computer Generated Forces	0	3877	1386	2961	3466	8678	17741	0	Continuing																											
<p>A. <u>Mission Description and Justification:</u> Project DC78 - Computer Generated Forces: This project provides for the development of software systems to realistically represent activities of units and forces in simulation. This representation is used to support concept evaluation, experimentation, materiel acquisition and training communities. This project funds improvements, new functionality, enhancements and re-architecture of Modular Semi-Automated Forces (ModSAF). Other initiatives include the systems engineering and design for improvements to the architecture and interoperability of Army SAFs, and the evolution to an Army universal computer generated forces system. This project is not a new start, but rather a realignment of funds from Interactive Simulation (DC77) to more appropriately identify/manage accomplishments of Computer Generated Forces as determined by the Army Modeling Simulation Office (AMSO). OneSAF is a composable next generation SAF which will represent a full range of operations, systems and control processes for support of training research, development and acquisition simulation applications including human-in-the-loop.</p> <p><u>Acquisition Strategy:</u> Competitive development leading to competitive procurements against performance specifications.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">█</td> <td style="width: 10%; text-align: right;">500</td> <td>Develop and integrate expansion of ModSAF battlefield operating systems representation/upper echelon behavior capabilities.</td> </tr> <tr> <td style="text-align: center;">█</td> <td style="text-align: right;">2894</td> <td>Establish the Integrated Product Team and develop the technical requirements, acquisition planning and concept for OneSAF.</td> </tr> <tr> <td style="text-align: center;">█</td> <td style="text-align: right;">385</td> <td>Verification and validation of newly integrated software.</td> </tr> <tr> <td style="text-align: center;">█</td> <td style="text-align: right;">98</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs.</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>3877</td> </tr> </table> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">█</td> <td style="width: 10%; text-align: right;">300</td> <td>Develop and integrate expansion of ModSAF battlefield operating systems representation/upper echelon behavior capabilities.</td> </tr> <tr> <td style="text-align: center;">█</td> <td style="text-align: right;">906</td> <td>Continue requirements generation for OneSAF.</td> </tr> <tr> <td style="text-align: center;">█</td> <td style="text-align: right;">180</td> <td>Verification and validation of newly integrated software.</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>1386</td> </tr> </table>										█	500	Develop and integrate expansion of ModSAF battlefield operating systems representation/upper echelon behavior capabilities.	█	2894	Establish the Integrated Product Team and develop the technical requirements, acquisition planning and concept for OneSAF.	█	385	Verification and validation of newly integrated software.	█	98	Small Business Innovative Research/Small Business Technology Transfer Programs. <p>A. Mission Description and Budget Item Justification: This project supports the engineering development/enhancement of the Electronic Tactical User Terminal (ETUT), Mobile Integrated Tactical Terminal (MITT), Forward Area Support Terminal (FAST), Advanced Electronic Processing Dissemination System (AEPDS) and Tactical Exploitation System (TES). The Army's emerging TES will incorporate the standards and protocols dictated by the Common Imagery Ground/Surface System (CIG/SS) program. TES brings all of the existing and emerging Army TENCAP capabilities (AEPDS, MIES, and ETRAC) into an integrated common baseline; downsized, modular and scaleable to meet a wide range of contingency requirements. TENCAP Common Baseline addresses common subsystems, planned improvements, key activities and ongoing/planned initiatives determined to have potential application to multiple TENCAP systems [including MIES and ETRAC that are funded under the Defense Airborne Reconnaissance Program (DARP) (PE 0305154D)]. Specific details are provided in the Tactical Intelligence and Related Activities (TIARA) Congressional Justification Book, Volume II and in the Army TENCAP Master Plan. This PE supports research efforts in the engineering and manufacturing development phases of the acquisition strategy and is therefore correctly placed in Budget Activity 5.</p> <p>Acquisition Strategy: As pioneers in streamlined acquisition, ASPO's success in delivering systems as those described above to warfighters can be directly attributed to an environment emphasizing stable funding, low density acquisition, minimal use of MILSPECS, and managed competition. By tailoring existing technology, leveraging the best commercial practices, and using commercial and government-off the shelf software, ASPO minimizes risk while maximizing efficiency. Finally, dedicated cradle to grave Integrated Logistics Support (ILS) for TENCAP systems is accomplished through a coordinated effort by Government and contractor personnel and facilities.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 10%; text-align: right;">4481</td> <td>Continued software upgrades and enhancements for the refinement of the TENCAP Common Baseline to fully exploit National capabilities such as integration of communications capabilities to meet changing architectures and implementation of software appliqué to provide the operational commander with enhanced battlefield intelligence products.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">5106</td> <td>Continued engineering development of TES.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">2343</td> <td>Completed effort to combine ETUT and EPDS capabilities into AEPDS.</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">2909</td> <td>Continued support to TENCAP program management and administrative activities [e.g. FFRDC (Aerospace), ARL support, ASPO support , Army Topographic Engineering Center (TEC) and Contractor SETA support].</td> </tr> <tr> <td style="text-align: center;">Total</td> <td style="text-align: right;">14839</td> <td></td> </tr> </table>										■	4481	Continued software upgrades and enhancements for the refinement of the TENCAP Common Baseline to fully exploit National capabilities such as integration of communications capabilities to meet changing architectures and implementation of software appliqué to provide the operational commander with enhanced battlefield intelligence products.	■	5106	Continued engineering development of TES.	■	2343	Completed effort to combine ETUT and EPDS capabilities into AEPDS.	■	2909	Continued support to TENCAP program management and administrative activities [e.g. FFRDC (Aerospace), ARL support, ASPO support , Army Topographic Engineering Center (TEC) and Contractor SETA support]. BUDGET ACTIVITY

5 - Engineering and Manufacturing Development

PE NUMBER AND TITLE

0604766A Tactical Exploitation of National Capabilities (TENCAP) - Engineering & Manufacturing Development (TIARA)

PROJECT

D909**FY 1998 Planned Program:**

■	6965	Continue software upgrades and enhancements for the refinement of the TENCAP Common Baseline to fully exploit National capabilities such as integration of communications capabilities to meet changing architectures and implementation of software appliqué to provide the operational commander with enhanced battlefield intelligence products. In addition to staying current with National and Theater capabilities, will include integration of Global Broadcast System (GBS) and the Joint Tactical Terminal (JTT) into the TENCAP systems.
■	8640	Continue engineering development of TES.
■	1761	Continue support to TENCAP program management and administrative activities [e.g. FFRDC (Aerospace), ARL support, ASPO support , Army Topographic Engineering Center (TEC) and Contractor SETA support].
■	441	Small Business Innovative Research/Small Business Technology Transfer Programs.
Total	17807	

FY 1999 Planned Program:

■	19951	Continue software upgrades and enhancements for the refinement of the TENCAP Common Baseline to fully exploit National capabilities such as integration of communications capabilities to meet changing architectures and implementation of software appliqué to provide the operational commander with enhanced battlefield intelligence products. In addition to staying current with National and Theater capabilities, will include integration of Global Broadcast System (GBS) and the Joint Tactical Terminal (JTT) into the TENCAP systems.
■	18379	Continue engineering development of TES.
■	6344	Continue support to TENCAP program management and administrative activities (e.g. FFRDC (Aerospace), ARL support, ASPO support , Army Topographic Engineering Center (TEC) and Contractor SETA support).
Total	44674	

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY 1998/1999 President's Budget	15235	19113	19531
Appropriated Value	14869	19113	
Adjustments to Appropriated Value	-30	-1306	
FY 1999 President's Budget	14839	17807	44674

Change Summary Explanation: FY 1999 increase (+25143) All efforts previously funded under 6063766A/project 909 were consolidated into this PE/project.

Mission Description and Budget Item Justification: The BAT is the submunition in the Block II missile system that supports the Army's deep fire doctrine that calls for the destruction and disruption of threat forces and long range weapons at ranges in excess of 100 kilometers before they can influence the maneuver battle. In the past, the only options have been to engage these targets with attack helicopters or fixed wing aircraft. While effective, these options place critical resources and their air crews at risk. The BAT system significantly reduces this risk through its autonomous acquisition and terminal guidance capabilities to attack well-defended armored forces behind enemy lines. The BAT system includes the BAT submunition, a pre-planned product improvement (P3I) BAT submunition, the Army Tactical Missile System Block II (ATACMS BLK II) missile, and the ATACMS BLK IIA missile. BAT is a dual-sensor (acoustic and infrared) submunition that autonomously seeks out and destroys moving armored vehicles without human interaction. It is an unpowered, aerodynamically stable vehicle, approximately 36 inches long, 5.5 inches in diameter and weighs 44 pounds. BAT and BAT P3I submunitions are carried deep into enemy territory by the two Army TACMS variants, then dispensed over a large target array to selectively attack and destroy individual targets. The BAT P3I program will improve the sensor and warhead subassemblies to increase lethality and to enable the BAT submunition to attack cold, stationary, armored targets and other critical high priority targets. The ATACMS BLK II missile is a version of the currently fielded and combat-proven Army TACMS Block I missile and is designed to carry 13 BAT or BAT P3I submunitions. The ATACMS BLK IIA missile is an extended range version of the ATACMS BLK II missile and will carry 6 BAT P3I submunitions out to ranges in excess of 200 kilometers. The projects in this Program Element support research efforts in the engineering and manufacturing development phases of the acquisition strategy and are therefore correctly placed in Budget Activity 5.

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D687 BAT P3I	15523	62376	65588	70835	55824	9514	4488	0	334316
<p>A. <u>Mission Description and Budget Item Justification:</u> Project D687-BAT P3I: The BAT P3I submunition maintains the BAT length, diameter, and weight configurations. The BAT P3I is a multi-sensored, terminally guided submunition that searches for, tracks, and destroys specific targets including mobile armored combat vehicles, cold stationary armored combat vehicles, Surface-to-Surface missile (SSM) Transporter Erector Launchers (TELs), and Heavy Multiple Rocket Launchers (MRL). BAT P3I submunitions are carried deep into enemy territory by variants of the Army Tactical Missile System (ATACMS), then dispensed over numerous high-payoff target concentrations to selectively attack and destroy individual targets. BAT P3I is intended to increase submunition lethality and expand the target set to be attacked. Being a certified round, the Block II and IIA missile carrying the BAT P3I submunition has a low sustainment cost. This program will incorporate new seeker, warhead, and microprocessor technologies into the current BAT configuration while maintaining the current BAT form, fit and maximum commonality of BAT components. This program includes studies/demos pertaining to technology advancements, alternate carriers, target recognition, and acoustic/infrared/millimeter wave characterization of expanded target sets.</p> <p><u>Acquisition Strategy:</u> The BAT P3I system is a sole source Program Definition and Risk Reduction (PDRR) program with competitive seeker subcontractors.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 12399 Conducted P3I PDRR program ■ 1500 Receipt and Assembly of Major Components of the Hardware-in-the-Loop Facility ■ 915 Developed Warhead Lethality Models ■ 609 Conducted Captive Flight Test (CFT) ■ 100 Trade studies, CAIV initiatives, and system improvement and optimization activities Total 15523 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 50985 Continue System Development and P3I PDRR Program ■ 1831 Continue Simulation and Testing Program ■ 3126 Conduct CFTs ■ 2100 Integrate and Test Seekers in the Hardware-in-the-Loop Facility ■ 2571 Conduct Warhead Testing

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY 1998/1999 President's Budget	18819	64556	70774
Appropriated Value	18819	64556	
Adjustments to Appropriated Value	-3296	-2180	
FY 1999 President's Budget	15523	62376	65588

Change Summary Explanation: Funding: FY 1997 funding adjustment due to reprogramming to higher priority programs (-3296).
 FY 1998 funding adjustment due to undistributed Congressional reductions (-2180).
 FY 1999 - Inflation adjustment (-5186) [NOTE: Database administrative error resulted in excessive adjustment for lower inflation. Will be corrected by below-threshold adjustment during FY 1999.]

C. Other Program Funding Summary: There are no other related RDT&E or other appropriation efforts.

<p>A. <u>Mission Description and Budget Item Justification:</u> Project D688-Army Tactical Missiles System Block II: The Army Tactical Missile System Block II (ATACMS BLK II) is a ground launched, solid propellant, inertially guided Global Positioning System (GPS) aided missile system with 13 BATs or P3I BATs as its payload. The mission of the ATACMS BLK II is to delay, disrupt, neutralize, or destroy armored combat vehicles and other critical high-payoff targets. Once the BAT P3I submunition is incorporated into the ATACMS BLK II, the target set will expand to include cold stationary armored combat vehicles, moving armored combat vehicles, heavy multiple rocket launchers and missile transporter/launchers. ATACMS BLK II will carry and dispense BAT and BAT P3I submunitions deep in enemy territory where these submunitions will autonomously track and destroy numerous critical high-payoff targets. GPS technology will increase accuracy in flight, mitigating target location errors. ATACMS BLK II will be launched from the M270 launcher. Further, these funds will allow for trade studies/demonstrations pertaining to technology advancements, payload variants, propulsion, guidance and control, and fire control improvements.</p> <p><u>Acquisition Strategy:</u> The Army Tactical Missile System Block II is a sole source, performance specification program.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> █ 63109 Conducted EMD Program to include Preliminary Design Review (PDR), Critical Design Review (CDR) and Block II/BAT Integration Activities █ 400 Conducted Sled Tests (OGA) █ 1100 Conducted Engineering Development Test (EDT) Flight █ 570 Prepared for and begin Production Proveout Test (PPT) Flight Program (OGA) █ 1374 Began Command and Control Software Design, Development and Test █ 250 Trade studies and system improvement and optimization activities Total 66803 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> █ 14000 Begin Pilot Production Line and Begin IOT&E Activities █ 64277 Continue EMD Including Submunition Integration █ 5010 Complete Production Proveout Test (PPT) Flights /Begin Preproduction Qualification Test (PQT) Flights █ 350 Conduct "Interim" Launcher Integration Tests █ 2465 Continue Command and Control Software Design, Development and Test

<p>A. Mission Description and Budget Item Justification: Project D686-Army TACMS Block IIA: The Army TACMS Block IIA (ATACMS Block IIA) will be a ground launched, solid propellant, inertially guided Global Positioning System (GPS) aided missile system with 6 BAT P3I submunitions as its payload. The ATACMS Block IIA will be launched from the M270 launcher in response to the same Command and Control (C2) systems applicable to the Block I, Block IA, and Block II missiles. Since the Block IIA payload contains 6 submunitions rather than 13, as in the Block II, it doubles the range of Block II. The mission of the ATACMS Block IIA will be to delay, disrupt, or destroy the Block II target sets plus cold stationary tanks and armored combat vehicles as well as moving and stationary surface-to-surface missile (SSM) transporter erector launchers (TELs) at extended ranges. The Block IIA missile will dispense 6 BAT P3I submunitions at ranges beyond the Block II system.</p> <p>Acquisition Strategy: The Army Tactical Missile System Block IIA is a sole source, performance specification program.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%;"></td> <td style="width: 10%;">8425</td> <td colspan="8">Initiate and Conduct EMD Program; Conduct Submunition Integration Activities</td> </tr> <tr> <td></td> <td>1857</td> <td colspan="8">Conduct Test Range and Target Operation, Maintenance and Improvement</td> </tr> <tr> <td>Total</td> <td>10282</td> <td colspan="8"></td> </tr> </table> <p>B. D2NT BAT Operational Test	5	0	253	5303	0	0	0	0	5845																																
<p>A. <u>Mission Description and Budget Item Justification:</u> Project D2NT-OPTEC: Project D2NT finances the direct costs of planning and conducting operational testing and evaluation of the BAT submunition by the Operational Test and Evaluation Command (OPTEC). Operational testing is conducted under conditions, as similar as possible, to those encountered in actual combat with typical soldiers trained to employ the system. OPTEC provides the Army leadership with an independent test and evaluation of both the effectiveness and suitability of the system.</p> <p><u>Acquisition Strategy:</u> Not applicable.</p> <p>FY 1997 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%;">5</td> <td style="width: 80%;">IOTE planning and preparation</td> </tr> <tr> <td>Total</td> <td>5</td> <td></td> </tr> </table> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%;">253</td> <td style="width: 80%;">IOTE planning and preparation</td> </tr> <tr> <td>Total</td> <td>253</td> <td></td> </tr> </table> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">5</td> <td style="text-align: center;">0</td> <td style="text-align: center;">273</td> </tr> <tr> <td>Appropriated Value</td> <td style="text-align: center;">5</td> <td></td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: center;">5</td> <td style="text-align: center;">0</td> <td style="text-align: center;">253</td> </tr> </tbody> </table> <p>C. <u>Other Program Funding Summary:</u> There are no other related RDT&E or other appropriation efforts.</p>										■	5	IOTE planning and preparation	Total	5		■	253	IOTE planning and preparation	Total	253			<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	FY 1998/1999 President's Budget	5	0	273	Appropriated Value	5			Adjustments to Appropriated Value				FY 1999 President's Budget	5	0	253

COST (In Thousands)	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D202 Army Joint STARS (TIARA)	9406	6726	5503	4010	12135	17990	12179	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> This is a Tactical Intelligence and Related Activities (TIARA) program. The joint Army/Air Force program objective is to develop a radar, datalink, ground station, and airframe that will provide the capability to locate, track and classify tracked and wheeled vehicles beyond ground line-of-sight during the day, night and under most weather conditions. Radar data is distributed to ground station modules via a secure surveillance and control data link. The Army developed the initial ground components of the JSTARS under this PE/Project. The Ground Station Module (GSM) is being developed in a Block approach. Block I (GSM) utilizes the same prime mission equipment and was developed and deployed on different platforms. The Block I Medium GSM (MGSM) is housed in a standard S280 shelter and mounted on a 5 Ton Truck. The rapidly deployable Block I Light GSM (LGSM) is housed in a Standard Integrated Command Post Shelter (SICPS) and mounted on a High Mobility Multi-Purpose Wheeled Vehicle (HMMWV). Included in this project is the development of the Block II GSM now called the Common Ground Station (CGS). The CGS will integrate signal, imagery, and other intelligence processing into a single ground station, resulting in enhanced battle management as well as significant cost savings. These enhancements are being implemented in a phased approach of Pre-Planned Product Improvement (P3I) initiatives and provide significant expansion of the system performance parameters. Specific enhancements include: integration of Secondary Imagery Dissemination, extended range Satellite Communications (SATCOM relay) capability, full on the move and manportable operations as well as integration/interface with other service/allied sensor systems. This program element supports development efforts in the Engineering and Manufacturing development phases of the Acquisition Strategy and is therefore correctly placed in Budget Activity 5.</p> <p><u>Acquisition Strategy:</u> In December 1995, the JSTARS Ground Station Program awarded an eight year [basic plus seven one year options] production contract to acquire the balance of ground stations required to meet Army needs. The first two years of the contract are Low Rate Initial Production (LRIP) with the first deliveries participating in a February 1998 Initial Operational Test. This test will support the Milestone III decision scheduled for July 1998. The contract also includes provisions for the design, development and test of various P3Is. Following P3I prove out, the modifications will be folded into the production contract via fixed price contract revisions. Those P3I enhancements initiated prior to the Full Production Decision (Milestone III) include Advanced Imagery Processing, Integration of Improved Data Modem (IDM) providing Army Aviation Command and Control (A2C2) interoperability and radar masking analysis tools. Following Milestone III, all P3Is will be implemented in block upgrades in accordance with the CGS System Improvement Plan (SIP).</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 1795 Completed Secondary Imagery Dissemination Integration ■ 1850 Initiated Sensor(A2C2/Airborne Reconnaissance Low Integration (P3I) ■ 5761 Initial Operation Test and Evaluation (IOT&E) Support Total 9406

Mission Description and Budget Item Justification: The Combined Arms Tactical Trainer (CATT) is a family of combined arms simulation systems designed to support the Army's simulation-based Combined Arms Training Strategy. The initial CATT system is the Close Combat Tactical Trainer (CCTT) which provides the underlying baseline (architecture, terrain data bases, after action review [AAR], semi-automated forces [SAF], and models/algorithms) for future CATT expansions. Synthetic Environment Core provides for the expansion of the CCTT Synthetic Environment baseline to include enhanced Aviation, Engineer, Fire Support, and Air Defense capabilities needed to support integration of hardware/simulators funded by System Program Managers. CATT enables units, from crew to the battalion task force level, to conduct a wide variety of combat tasks on a realistic, interactive synthetic battlefield. CATT's combination of manned simulators and staff officer workstations enables units to train as a combined arms team in a cost effective manner. CATT reinforces the successes and corrects the shortcomings of the Simulator Network (SIMNET) and Aviation Network (AIRNET) demonstration programs executed by the Defense Advanced Research Projects Agency (DARPA). By practicing skills in CATT, units are able to make more effective use of scarce and costly live fire and maneuver exercises as well as train tasks deemed too hazardous to conduct in the field. Fielded in both fixed site and mobile/transportable versions, CATT enables both Active and Reserve component units to prepare for real world contingency missions. Units taking their CATT systems with them on operational deployments, such as peacekeeping missions, are able to sustain essential warfighting skills when not at their home station. By being able to process a wide array of terrain data bases and modify the behavior of the computer generated opposing forces, CATT offers a virtually unlimited array of training options to support the Army's many regional contingency missions. The combination of tough field and live fire training and realistic simulation training in CATT is the catalyst to prepare soldiers and their leaders for the uncertainties they will face in an unpredictable world. The projects in this program element support research efforts in the engineering and manufacturing development phases of the acquisition strategy and are therefore correctly placed in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604780A Combined Arms Tactical Trainer (CATT)				PROJECT D571	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D571 Close Combat Tactical Trainer	29420	12880	7533	11551	7836	5200	5400	0	281550
<p>A. Mission Description and Justification: Project D571 - Close Combat Tactical Trainer: Provides for engineering and manufacturing development (EMD) and pre-planned product improvements for the Close Combat Tactical Trainer (CCTT) which will enhance readiness of both active and reserve component forces. The program will develop a networked system of interactive computer driven simulators, emulators and semi-automated forces that replicate combat vehicles and weapon systems, combat support systems, combat service support systems, and command and control systems to create a fully integrated real-time collective task training environment. This trainer will allow soldiers to practice, repetitively, techniques which, if performed on real equipment, would be too hazardous, time-consuming and expensive. These trainers enhance realism and allow soldiers and units to learn tactical combat lessons on maneuver, command and control, and improved teamwork for increased survivability.</p> <p>Acquisition Strategy: Competitive cost plus award fee contract for EMD phase. Competitive procurement against performance specifications as part of basic contract.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 27109 Completed deliveries, completed final functionality, planned and executed Limited User Test prepared for Initial Operational Test and Evaluation (IOT&E), corrected deficiencies from testing, completed documentation and audit trail, and prepared for Pre-Planned Product Improvements. ■ 1921 Maintained support services to the program office. ■ 390 Provided government program management, engineering, technical and contract support. DC45 Aircrew Integrated Systems (ACIS) - ED	4331	4951	6599	6508	9638	3745	2235	Continuing	Continuing												
<p>A. <u>Mission Description and Budget Item Justification:</u> Project DC45 Aircrew Integrated Systems (ACIS) - Engineering Manufacturing Development (EMD) This project provides engineering and manufacturing development for those systems and items of equipment which are unique and necessary for the sustainment, survivability, and performance of Army aircrews and troops on the future integrated battlefield and related training missions. EMD programs will focus on air vehicle integration, airworthiness qualification and user evaluation of multiple technologies to improve aircrew mission performance, aircrew comfort, aircrew and aircrew station interface, safety, and survivability. These programs include: advanced laser protection against emerging new threat systems; product improvements to existing helmets to improve performance and increase commonality; development and adaptation of airbag technology to Army aircraft to improve crash protection and enhance aircrew survivability; and follow-on air vehicle integration and test of Air Warrior program effort to enhance and maximize aircrew performance in force modernized aircraft. Maximum advantage will be taken of simulation to reduce program technical risk through early user evaluation and to reduce program design and test cost and schedules. Both joint and service independent efforts will be pursued under the scope of this project. This Program Element supports research efforts in the EMD phase of the Acquisition Strategy and is correctly placed in Budget Activity 5. Both joint and service independent efforts will be pursued under the scope of this project.</p> <p><u>Acquisition Strategy:</u> The Cockpit Air Bag Systems (CABS) B-kit components will be competitively procured using an approved performance specification and interface drawings (except that the initial production quantity will be procured sole-source from the developer.) The CABS A-kit hardware will be aircraft specific and will be procured competitively. CABS will be installed via field retrofit and production line incorporation (where applicable.) Pre-Planned Product Improvement of the helmet is awarded, as required, to the helmet developer, Gentex Corp. Performance specifications for the joint service advanced laser eye protection program are being developed and will be used for production competition. A competitive Air Warrior Program Definition and Risk Reduction (PDRR) development contract was awarded in FY 97 to perform a functional requirements analysis and consider user requirements and available technologies to optimize recommended alternatives within the constraints of cost as an independent variable. During a combined PDRR and EMD phase, the contractor will develop the Air Warrior systems and integrate those systems with the force modernization aircraft. Prototypes that represent the final Air Warrior configuration will be developed for test and evaluation.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 5%;"></td> <td style="width: 10%; text-align: right;">3083</td> <td>Continued EMD for UH-60 Cockpit Air Bag System (CABS)</td> </tr> <tr> <td></td> <td style="text-align: right;">898</td> <td>Continued AIHS P³I efforts in EMD</td> </tr> <tr> <td></td> <td style="text-align: right;">350</td> <td>Continued Advanced Laser Eye Protection (Joint Service) EMD</td> </tr> <tr> <td colspan="2">Total</td> <td style="text-align: right;">4331</td> </tr> </table>											3083	Continued EMD for UH-60 Cockpit Air Bag System (CABS)		898	Continued AIHS P ³ I efforts in EMD		350	Continued Advanced Laser Eye Protection (Joint Service) EMD	Total		4331

Mission Description and Budget Item Justification: Provides for engineering development of weapons and munitions systems. The Multi-Purpose Individual Munition (MPIM) provides the infantry with a fire-and-forget weapon capable of defeating enemy forces in buildings, bunkers and lightly armored vehicles. The howitzer ammunition effort supports development of ammunition for the M119A1 Howitzer. The mortar systems effort supports qualification of an Improved Mortar Ballistic Computer (IMBC) and type classification of training and illumination cartridges for the 120mm mortar. The XM982 extended range Dual Purpose Improved Conventional Munition (DPICM) is an extended range 155mm artillery projectile. It will extend the range of the M198, M190A5, M190A6, 155mm Paladin and the lightweight Howitzer to approximately 37 kilometers, with the Modular Artillery Charge System (MACS) in Crusader extending the range to 47 kilometers. The Hydra 70 EMD program will accomplish airworthiness testing of the Hydra 70 rocket motor under various flight conditions. The non-lethal program provides for force response options for non-lethal immobilization of personnel and materiel through development of non-lethal capabilities for multiple weapon systems/platforms. The small arms improvement program develops technology to enhance lethality, target acquisition, fire control, training effectiveness and /or reliability for small arms weapon systems. This project develops a

D284 Multipurpose Individual Munition	7450	2831	16624	16150	9716	0	0	0	60943
<p>A. <u>Mission Description and Justification:</u> Provides for the engineering manufacturing development (EMD) of a lightweight, shoulder fired, multiple purpose weapon. Provides the infantry with a fire and forget weapon capable of defeating enemy forces in buildings, bunkers, and lightly armored vehicles. The Multi-Purpose Individual Munition/Short Range Anti-Tank Weapon (MPIM/SRAW) is capable of being fired quickly from its carrying configuration and can be safely fired from an enclosure for the close battle. It is more versatile than the AT4 system because it can be fired from enclosures and defeat bunkers and various field fortifications. This system will have tremendously increased lethality over the AT4 and will be multiple target capable. System design will allow for growth, service life extension and technology insertion to support the U. S. Army mission of crisis response to regionally based threats. The Army and U. S. Marine Corps have signed a memorandum of agreement for a horizontal technology integration effort utilizing the USMC SRAW flight module/launcher as the carrier for the MPIM warhead.</p> <p><u>Acquisition Strategy:</u> The MPIM/SRAW is a 65-month two phase EMD program which will leverage off the USMC 42-month SRAW EMD contract awarded in June 1994 and the 18-month U. S. Army technology demonstration MPIM/SRAW contract awarded in January 1995. The MPIM/SRAW EMD Phase 1 contract (18 month risk mitigation effort) was awarded in October 1996 with an EMD Phase 2 (maturation) contract (option) award in April 1998. Funding for initial production facilitization (IPF) and long lead items (LLI) procurement begins in FY 01 to facilitate maintaining an FY 02 First Unit Equipped (FUE). Low rate initial production (LRIP) will begin in FY 02. Full rate production begins in FY 04.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 1841 Continued Phase 1 EMD effort ■ 750 Completed warhead module design improvements ■ 700 Completed simulation VV&A ■ 1750 Conducted Phase 1 EMD flight tests and analysis ■ 701 Initiated procurement of missile hardware for pre-production test (PPT) flight tests ■ 850 Initiated integrated logistics support (ILS), quality and environmental programs to support EMD ■ 858 Finalized system level specification for preliminary design review (PDR) Total 7450

Change Summary Explanation:

Funding: FY 97- Due to restructuring of MPIM EMD into a two-phase effort, funds became available for reprogramming to higher priority requirements (-6658)

FY 99-Congressional adjustments (-1300); realigned (-1000) to higher priority requirements.

Schedule: The Army has restructured the MPIM/SRAW program to an incremental EMD, an 18 month risk mitigation (Phase 1) prior to award of the 47-month EMD phase (Phase 2) option.

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D613 Mortar Systems	5000	9692	11200	0	0	0	0	0	26200
<p>A. <u>Mission Description and Justification:</u> This program provides funds to develop existing and emerging technology to enhance the effectiveness, lethality, versatility of use, mobility, and accuracy of mortar systems. Current mortar systems include conventional ammunition with a variety of fuzing and applications, weapons that range from man-portable 60mm to vehicle-mounted 120mm mortars, and related equipment such as fire control, mortar ballistic computer, training devices, and ammunition. Current funding for this project completes development of the digital Mortar Fire Control System (MFCS), which exponentially reduces response time while improving accuracy. This significantly improves the survivability of the mortar crew and reduces the possibility of fratricide and collateral damage. MFCS will be compatible with the Advanced Field Artillery Tactical Data System (AFATDS) and fully integrate mortars into the fire support network. It will also be compatible with the Future Battle Command, Brigade and Below (FBCB2) situation awareness software.</p> <p><u>Acquisition Strategy:</u> The Mortar Fire Control System was approved as a two year Warfighting Rapid Acquisition Program (WRAP) effort. FY 1997 funds were realigned to this program from PE 0203758A (Horizontal Battlefield Digitization) in FY 1997. FY 1998 WRAP funding was aligned to this PE in the FY 1998 DoD Appropriations Bill, at the Army's request. Development will be accomplished by a primary contractor (Allied-Signal Corp. of Teterboro, NJ) teamed with a number of subcontractors. Initial production, scheduled for FY 2000, is planned as an option to the development contract.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 200 Developed performance specifications ■ 950 Prepared request for proposal, conducted Best Value source selection ■ 3850 Awarded initial contract increment Total 5000 <p>FY 1998 Planned Program</p> <ul style="list-style-type: none"> ■ 7560 Contractor software development and hardware integration ■ 240 Conduct user assessment ■ 1649 Support and Management ■ 243 Small Business Innovative Research/Small Business Technology Transfer Programs Total 9692

Adjustments to Appropriated Value	5000	-308	
FY 1999 President's Budget	5000	9692	11200

Change Summary Explanation:

Funding – FY 1997/1998: The Mortar Fire Control System (MFCS) was approved as a Warfighting Rapid Acquisition Program (WRAP). FY 1997 funds were reprogrammed to this project for this effort. FY 1998 funds were provided in the DoD FY 1998 Appropriations Bill. FY 1999 funds were provided to continue EMD of the high priority Mortar Fire Control System program.

Schedule: The WRAP reprogramming moves the development and subsequent fielding of this system up by two years.

D695 XM982 Projectile	0	635	5901	10729	16169	16753	0	0	50187
<p>A. <u>Mission Description and Justification:</u> The XM982 is an extended range Dual Purpose Improved Conventional Munition (DPICM) projectile which is an extended range 155mm artillery projectile. It will be compatible with all current and future 155mm artillery systems in the U. S. inventory. The XM982 will extend the range of the M198, M109A5, 155mm Paladin (M109A6), and the lightweight Howitzer to approximately 37 kilometers. The XM982 with the Modular Artillery Charge System (MACS) extends the Crusader range to 47 kilometers. Allowing greater stand-off from threats and faster defeat of potential threats increases survivability.</p> <p><u>Acquisition Strategy:</u> Engineering and manufacturing development (EMD) will consist of a system contract to design, test and manufacture hardware and then produce development test hardware for government test and evaluation. Development testing, consisting of safety tests and firing table tests, will be accomplished by TECOM at TECOM Proving Grounds during EMD. The EMD contractor will perform production. The EMD contract will include unpriced options.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997 under this project. However, congressional support for the XM982 Extended Range Artillery Projectile program was provided in PE 0603004A/D43A.</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> █ 509 Government support for engineering: Integrated Product Team (IPT), contract solicitation, engineering support for development testing. █ 110 Program management: technical evaluation; program execution █ 16 Small Business Innovative Research/Small Business Technology Transfer Programs Total 635 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> █ 1390 Government support for engineering: Integrated Product Team (IPT), contract solicitation, engineering support for development testing. █ 4081 Contracts for propellants, fuzing and metal parts █ 110 Program management █ 320 Test and evaluation Total 5901

<p>A. Mission Description and Justification: This project will accomplish air qualification testing of the Hydra 70 rocket motor from the Apache Attack Helicopter under various flight conditions. The objective of the tests will be to determine the safety and compatibility of the rocket motor with the firing platform under various tactical conditions. A subject of major interest will be the effect of rocket exhaust gasses on helicopter engines and compatibility with current fire control system.</p> <p>Acquisition Strategy: The Hydra 70 project manager will manage funding and scheduling of the tasks to prove airworthiness of the composite propellant rocket motors. Technical support will be provided by AVRDEC/MRDEC. Firings will be conducted by TECOM at Yuma Proving Ground, Arizona.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10px;">■</td> <td style="width: 50px;">2000</td> <td>Purchase 500 rocket motors and test the warheads</td> </tr> <tr> <td>■</td> <td>600</td> <td>Rental of AH64 Helicopter from Fort Rucker</td> </tr> <tr> <td>■</td> <td>600</td> <td>Range costs at Yuma Proving Ground</td> </tr> <tr> <td>■</td> <td>800</td> <td>Government engineering support (AVRDEC/MRDEC/IOC/NSWC/ARDEC)</td> </tr> <tr> <td colspan="2">Total</td> <td>4000</td> </tr> </table>										■	2000	Purchase 500 rocket motors and test the warheads	■	600	Rental of AH64 Helicopter from Fort Rucker	■	600	Range costs at Yuma Proving Ground	■	800	Government engineering support (AVRDEC/MRDEC/IOC/NSWC/ARDEC)	Total		4000

D712 Non-Lethal Programs	2731	0	0	0	0	0	0	0	2731
<p>A. <u>Mission Description and Justification:</u> This program will demonstrate the application of non-lethal technologies, devices and munitions that are explicitly designed and employed to incapacitate personnel and/or materiel while minimizing fatalities and undesired damage to property and the environment. Non-lethal devices have the potential to provide the foundation for regional and peacekeeping operations to be successful, and may allow military forces to respond to such conflicts through the use of an established Graduated Response Matrix. The application of non-lethal capabilities that minimizes collateral damage while providing for safe employment and mission accomplishment will enhance operational effectiveness.</p> <p><u>Acquisition Strategy:</u> Upon completion of user demonstration and feedback, selected non-lethal devices/munitions will be integrated into the appropriate acquisition phase depending on their design maturity and ability to fulfill the user's needs.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 1785 Acoustics: Initiated integration of initial health hazard assessment into acoustic source design configuration and propagation measurement, for demonstration tests and potential weapon /platform applications ■ 590 Kinetics: Performed initial validation test of health hazard (target) assessment model (HHTAM) for blunt impact munitions. Developed functional purchase description for urgent release items. Conducted safety test and evaluation of kinetic systems in support of dismounted battlespace battle lab's warfighting experiments ■ 259 Entanglements: Conducted safety and performance testing of gun-fired 40mm ballistically deployed entanglement munition with integrated fuze ■ 97 Vehicle stopper: Completed commercial off-the-shelf (COTS) electric discharge vehicle stopper performance evaluation Total 2731 <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p>

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost																								
DAS1 Small Arms Improvement	1525	1453	0	2459	3092	3235	6772	Continuing	Continuing																								
<p>A. <u>Mission Description and Justification:</u> This program provides funds to develop existing and emerging technology to enhance lethality, target acquisition, fire control, training effectiveness, and reliability for small arms weapon systems. Current small arms include a variety of personal defense weapons (.38 caliber, .45 caliber; 9mm), individual weapons (5.56mm), crew-served weapons (5.56mm-40mm) and related equipment such as fire control, training devices and ammunition. Current efforts focus on improvements to the MK19-3 Grenade Machine Gun (GMG) and M2 Heavy Barrel Machine Gun. Improvements to the M2 Heavy Barrel, Caliber .50 Machine Gun include a trigger safety and a Quick-Change Barrel (QCB) kit to increase safety while simplifying and accelerating M2 barrel changes. Improvements to the MK19-3 GMG include an investigation of two mount designs. Both mounts eliminate excessive looseness and allow bold and accurate fire. One design permits remote control firing. Both mounts will accept either the MK19 or the caliber .50 M2 Heavy Barrel. The Small Arms Fire Control System (SAFCS) provides a full solution fire control for the MK19. The Low Cost Training Ammunition (LCTA) provides visibility out to 1500 M while reducing the cost of current ammunition training.</p> <p>Acquisition Strategy: The universal mounting bracket will enter production as an engineering change to the current MK19-3 Grenade Machine Gun technical data package. Currently fielded systems will be modified through an MK19-3 modification effort. SAFCS strategy will lead to a type classification (Generic) and procurement of test hardware. Several non-developmental item (NDI) solutions exist for the caliber .50 QCB. QBC strategy is NDI, evaluation of competitive bid samples and contract award for DT/OT hardware. Both new mounts will be direct replacements for the MK19. Since 100% replacement is not practical, a Basis of Issue (BOI) will be developed. The LCTA strategy includes a market survey and procurement and testing a limited sample of potential products for verification of the product's performance specification.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10px;">■</td> <td style="width: 50px; text-align: right;">116</td> <td>Solicited competitive hardware</td> </tr> <tr> <td>■</td> <td style="text-align: right;">588</td> <td>Conducted technical evaluation</td> </tr> <tr> <td>■</td> <td style="text-align: right;">287</td> <td>Awarded hardware contract</td> </tr> <tr> <td>■</td> <td style="text-align: right;">181</td> <td>Fabricated test hardware</td> </tr> <tr> <td>■</td> <td style="text-align: right;">222</td> <td>Performed technical and limited user test</td> </tr> <tr> <td>■</td> <td style="text-align: right;">43</td> <td>Prepared test reports and assessments</td> </tr> <tr> <td>■</td> <td style="text-align: right;">88</td> <td>Type classification of generic SAFCS</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td>1525</td> </tr> </table>										■	116	Solicited competitive hardware	■	588	Conducted technical evaluation	■	287	Awarded hardware contract	■	181	Fabricated test hardware	■	222	Performed technical and limited user test	■	43	Prepared test reports and assessments	■	88	Type classification of generic SAFCS	Total		1525

<p>A. <u>Mission Description and Budget Item</u>: This project supports the development and transition to procurement of military tactical bridging for wet and dry gap bridging requirements such as the Common Bridge Transporter (CBT), the Improved Ribbon Bridge (IRB) Bays, Heavy Dry Support Bridge (HDSB), and Line of Communication Bridge (LOCB). All bridging work is in support of the increased military load class (MLC) requirements for the Abrams tank. This project also provides for market investigations of engineer construction equipment.</p> <p><u>Acquisition Strategy:</u> CBT - Competitive RDTE followed by procurement. HDSB - Competitive RDTE followed by competitive procurement. IRB – Limited RDTE followed by competitive procurement.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 7706 Fabricated HDSB EMD Bridge Prototype ■ 258 Tested IRB Ramp Prototype ■ 195 Modified CBT Interfaces with HDSB & IRB ■ 250 Completed IRB Embankment Height & Vehicle Interface Study ■ 338 Simulated CBT Vehicle Performance with HDSB & IRB Loads ■ 87 Conducted Market Investigations for Construction Equipment Total 8834 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 6006 Fabricate HDSB EMD Launcher Prototype ■ 541 Prepare for contractor testing ■ 655 Contractor testing of HDSB Prototype ■ 294 Test IRB Positive Flotation ■ 237 IRB Market Investigation ■ 361 Conduct market investigations for Construction Equipment ■ 208 Small Business Innovative Research/Small Business Technology Transfer Programs Total 8302

PROJECT

DH01**FY 1999 Planned Program:**

■	2096	Prepare and Fabricate HDSB EMD System Support Package
■	923	Complete contractor testing of HDSB EMD Prototype
■	3216	Initiate Pre-production Qualification Test (PPQT) of HDSB
■	430	Prepare IRB Production Solicitation
■	400	Complete IRB Positive Flotation Test
■	510	Conduct market investigation for Construction Equipment
Total	7575

PROJECT

DL39**FY 1999 Planned Program:**

■	100	Develop purchase description for 18K BTUH ECU.
■	150	Develop purchase description for large diesel heaters (250K + BTUH).
■	312	Complete testing of large heater prototypes.
■	450	Complete fabrication of 1500 GPH ROWPU prototypes.
■	1200	Conduct PQT and IOT&E on the 1500 GPH ROWPU.
■	299	Update Program Management Documentation for MS III IPR.
Total	2511

<p>A. Mission Description and Justification: This project provides for the engineering development of Army watercraft systems. FY99 efforts will center on the completion of Containerized Maintenance Facility (CMF) Development (this item replaces current Floating Machine Shops). Components for the CMF have been identified as a result of prior initiatives. However, Container/Shelter Configuration and Packaging Configurations still require additional development. Strategy is to complete remaining developmental activity, then immediately commence acquisition, assembly and packaging in the same fiscal year (FY 99). This will allow early fielding and consequent retirement of the costly Floating machine Shop. Program also includes engineering development of the Port Communications and Control Center (PCCC). This program will provide for the safe and effective management of Army and Joint Port Operations during deployment of forces; both under Logistics Over The Shore (LOTS) conditions and operations in existing port facilities.</p> <p>Acquisition Strategy: CMF: In house completion of Engineering Development and initiation of Follow-on Acquisition by the Construction Battalion Center (CBC). Port Communication and Control Center (PCCC) – competitive procurement to performance specification.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997</p> <p>FY 1998 Planned Program: Project not funded in FY 1998.</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 10%;"></td> <td style="width: 10%; text-align: center;">2000</td> <td style="width: 80%;">Full scale development of the Containerized Maintenance Facility (CMF).</td> </tr> <tr> <td></td> <td style="text-align: center;">85</td> <td>Initiate development of the PCCC.</td> </tr> <tr> <td>Total</td> <td style="text-align: center;">2085</td> <td></td> </tr> </table> <p>B. Mission Description and Budget Item Justification: Supports the Army Enterprise Strategy to achieve interoperability within the Army and with the Joint/Combined forces. This program includes Engineering and Manufacturing Development (EMD), integration and interoperability support for Army command, control, communications, computer, intelligence, electronic warfare and sensor (C4IEWS) systems, and the supporting interoperability facilities/tools. Also included is engineering development of life-cycle capability to develop, test, and maintain interoperability, and support an interoperability development and evaluation process consisting of an Army interoperability board and technical management to ensure that the integration of new technologies for emerging systems support joint interoperable Force XXI architecture for Army battlefield digitization. Also included is the Army portion of engineering development efforts in support of the Combat Survivor Evader Locator System (CSEL). This includes the Single Channel Ground and Airborne Radio System (SINCGARS) product improvements identified in the SINCGARS System Improvement Plan; the Frequency Hopping Multiplexer (FH MUX) which allows multiple radios to operate on one antenna for reduced visual signature and rapid transportability and set-up; and follow-on programs to demonstrated technologies evolving from Wireless Network Access, Communications Network Planning and Management and initiatives to establish a Multiband Radio Integrated testbed. The projects in this Program Element support research efforts in the engineering and manufacturing development phase of the acquisition process and therefore are correctly placed in Budget Activity 5.

PROJECT

D097**FY 1998 Planned Program: (continued)**

■ 282 Develop VMF test tool, Builds 2 & 3, to support correct C4IEWS system implementations of the Joint/Army Technical Architecture's VMF standard

■ 237 Develop Mil-Std-188-220 protocol test tool Conformance Tester capability for to support correct C4IEWS system implementations of the Joint/Army Technical Architecture's 188-220 protocol

■ 102 Small Business Innovative Research/Small Business Technology Transfer Programs

Total 4049

FY 1999 Planned Program:

■ 750 Develop and operate the AIN core capabilities to facilitate test, experimentation and evaluation of Army C4IEW systems interoperability/software development/sustainment (for Force XXI modernization, ACTDs, Joint tests and tactical systems)

■ 400 Systems engineering of AIN design, analysis, integration, installation and test support for C4IEWS system requirements

■ 600 Provide core AIN network connections to link geographically dispersed network hubs/sites

■ 300 Provide AIN technology improvements and system upgrades to meet emerging test support requirements for C4IEWS systems and Force XXI

■ 650 Provide external DIL connectivity to remote battlefield digitization sites

■ 350 Upgrade, operate and support DIL Evaluation & Certification Testbed and other facilities supporting the battlefield digitization

■ 300 Acquire/update DIL hardware and software interfacing systems, test tools, and supporting systems for 1st Digitized Division and TA/SA evaluations

■ 421 Acquire DIL automated scenario drivers and test analysis tools for 1st Digitized Division evaluations and TA/SA evaluations

■ 282 Develop VMF test tool, Build 4, to support correct C4IEWS system implementations of the Joint/Army Technical Architecture's VMF standard

■ 242 Develop Mil-Std-188-220 protocol test tool Network Analyzer combat radio network diagnosis; evolve capabilities with evolution of the standards

<p>A. Mission Description and Budget Item Justification: Project D282 - SINCGARS-V Engineering Development: This program provides for analysis and implementation of overall product improvements to the SINCGARS Combat Net Radio. Product improvements included are Global Positioning System (GPS) interfaces, Airborne Battlefield Combat Identification System (BCIS), Forward Error Correction (FEC) (data transmission enhancement techniques), improved data capability, weight reduction (to include an Advanced System Improved Receiver Transmitter, Battery Box and Vehicular Appliqué), MANPRINT (ease of operations), vehicular system re-engineering, improved electronic counter-counter measure (ECCM) performance and switched system dial-up interfacing. Program provides simplified operations, improved performance of existing capabilities, new operational capabilities and reduced life cycle costs.</p> <p>Acquisition Strategy: The Advanced System Improved Receiver-Transmitter and associated items development design products were used by competitive producers as a part of the FY 97 production competition of the SINCGARS radio.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 3100 Completed development effort for ITT Advanced SIP Radio ■ 3100 Completed development effort for GD Advanced SIP Radio ■ 515 Program Management Support - Office Automation Total 6715 <p>FY 1998 Planned Program: Project not funded in FY98</p> <p>FY 1999 Planned Program: Project not funded in FY99</p> <p>B. D485 C4I Interoperability Standardization and Certification	4172	3106	5103	5478	4863	4640	4513	Continuing	Continuing																														
<p>A. <u>Mission Description and Budget Item Justification:</u> C4I Interoperability Standardization and Certification: Evaluate system's interoperability for the Army XXI battlefield digitization effort, in support of the Vice Chief of Staff of the Army (VCSA) and Army Acquisition Executive (AAE), to identify interoperability issues, develop certification recommendations, and provide architecture assessments by the Digital Integration Lab (DIL). Interoperability certification recommendations and assessments are provided to the Army Digitization Office (ADO) and Army System Engineer. Establish and sustain interoperability between Army C4I systems, and between the Army and Joint/Allied C4I communities in support of DOD 4630.5, DODI 4630.8, CJSCI 6212.01, and AR73-1. Provide the Army focal point for the review, staffing, coordination, and development of Army positions for interface interoperability standards and specifications. Participate in Joint/Allied and intra-Army interoperability certification testing and represent the Army in the Joint/Allied Configuration Management Process. Develop and configuration manage two key elements of the Joint/Army Technical Architectures - the Variable Message Format (VMF) message and the MIL-STD-188-220 protocol standards, in support of Army Science Board directive and approved Technical Architectures.</p> <p><u>Acquisition Strategy:</u> The efforts funded within this project are non-system specific, therefore no Acquisition Strategy is provided.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%; text-align: center;">■</td> <td style="width: 5%; text-align: right;">207</td> <td>Evaluated and certified IT/C4ISR systems interoperability to assure compliance with the Technical and System Architectures</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">190</td> <td>Provided Digital Integrated Laboratory (DIL) Systems Engineering and Integration support</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">731</td> <td>Developed, evolved and maintained required Variable Message Format (VMF) messages, obtained joint approvals, and published VMF Standards for Task Force XXI</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">265</td> <td>Developed, maintained, jointly approved and published Mil-Std-188-220A as part of Joint/Army Technical Architectures for Task Force XXI</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">684</td> <td>Provided testing support and analysis for VMF and Mil-Std-188-220 system implementations for Task Force XXI</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">1180</td> <td>Army configuration management of Tactical Digital Info Link (TADIL) & U.S. Message Text Format (USMTF) and Joint Certification Testing</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">200</td> <td>Provided Army certification recommendations to the Joint for (JITC/OJCS)</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">332</td> <td>Developed and managed Joint Tactical Data Link Management Plan (JTDLMP)</td> </tr> <tr> <td style="text-align: center;">■</td> <td style="text-align: right;">383</td> <td>Developed Joint Information Exchange Requirements (JIERS)</td> </tr> <tr> <td colspan="2" style="text-align: right;">Total</td> <td style="text-align: right;">4172</td> </tr> </table>										■	207	Evaluated and certified IT/C4ISR systems interoperability to assure compliance with the Technical and System Architectures	■	190	Provided Digital Integrated Laboratory (DIL) Systems Engineering and Integration support	■	731	Developed, evolved and maintained required Variable Message Format (VMF) messages, obtained joint approvals, and published VMF Standards for Task Force XXI	■	265	Developed, maintained, jointly approved and published Mil-Std-188-220A as part of Joint/Army Technical Architectures for Task Force XXI	■	684	Provided testing support and analysis for VMF and Mil-Std-188-220 system implementations for Task Force XXI	■	1180	Army configuration management of Tactical Digital Info Link (TADIL) & U.S. Message Text Format (USMTF) and Joint Certification Testing	■	200	Provided Army certification recommendations to the Joint for (JITC/OJCS)	■	332	Developed and managed Joint Tactical Data Link Management Plan (JTDLMP)	■	383	Developed Joint Information Exchange Requirements (JIERS)	Total		4172

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D589 Army Systems Engineering & Warfighter Technical Support	0	3063	6537	7824	7909	8128	8014	Continuing	Continuing
<p>A. <u>Mission Description and Budget Item Justification:</u> Army Systems Engineering & Warfighter Technical Support: Recommended by the Army Science Board and directed by the Army Acquisition Executive (AAE) and Vice Chief of Staff of the Army (VCSA), the ASE Provides essential technology expertise on all Systems Engineering and Technical Architecture (SE/TA) matters critical to gain Information Dominance and foster interoperability among all Army systems. The Joint Technical Architecture-Army (JTA-A) provides the ‘building code’ foundation for designing, building, fielding, and supporting interoperable systems in an expedient and cost-effective manner. Army System Engineer (ASE) supports CIO/DISC4/ADO in defining and maintaining the JTA-A and technically influences development and implementation of the JTA. ASE identifies new and emerging standards for integration of new technologies into existing Army Systems and ATD/ACTDs to support Army 2010. The ASE's work efforts associated with the development and implementation of the JTA-A under this project are critical path elements to achieve the Army's DIV XXI, CORPS XXI, and Army XXI digitization mission, provide the ability to fight and win on tomorrow's battlefield, and assure compatibility with both Joint and Coalition Warfighters. WTS provides essential field technical expertise, on-site risk analysis and execution planning to integrate emerging technologies and support the next generation of digitization across all 21st.Century Battlefield Operating Systems. Inserts new technology (other services and commercial) into ATD/ACTDs promoting timely adaptation of emerging commercial products across the suite of existing systems to gain Information Dominance. Prepares essential documentation to achieve the technical evolution to a joint interoperable architecture and to achieve rapid acquisition for fielding systems to Force XXI. Proposes technically feasible joint experiments to submit to Joint C4ISR Battle Center (JBC) for operational testing. Performs technical coordination/integration activities to accelerate program enhancements through solutions to current user problems in the field by incorporating on-the-spot soldier input/feedback. Supports development of the operational architecture and implementation of new warfighter information technologies throughout the force structure. NOTE: This is not a new start effort. FY97 program tasks have been resourced through an joint HQDA/HQAMC effort via a series of below-threshold reprogramming actions across multiple program elements and project lines.</p> <p><u>Acquisition Strategy:</u> The efforts funded in the project are non-system specific, therefore no acquisition strategy is provided.</p> <p>FY 1997 Accomplishments: Project not funded in FY97</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> █ 1000 Conduct major design evaluations of Army systems for Joint Technical Architecture-Army (JTA-A) Interoperability Compliance █ 500 Ensure JTA-A Interoperability Implementation through IPT/Contract actions and assess the JTA-A compatibility of Army Science and Technology Programs █ 700 Assess JTA-A Interoperability for Army Systems █ 313 Technically influence the development and implementation of the JTA-A █ 374 Conduct joint interoperability experiments with the Joint C4ISR Battle Center and other services

		PROJECT D589

FY 1998 Planned Program: (continued)

■	100	Interim Design Division (IDD) Planning Support
■	76	Small Business Innovative Research/Small Business Technology Transfer Programs
Total		3063

FY 1999 Planned Program:

■	1350	Conduct Major design evaluations for Joint Technical Architecture-Army (JTA-A) Interoperability
■	1362	Ensure JTA-A Interop Implementation and Assess JTA-A compatibility for Army and S&T Programs
■	800	Assess JTA-A interop for Army Systems
■	617	Technically influence the development/implementation of Joint Technical Architecture (JTA)
■	432	Maintain existing JTA-A Information Technical Standards
■	450	Investigate information technical standards for inclusion in JTA-A/JTA
■	169	Technically influence commercial and international standards forums
■	550	Conduct Joint Interoperability experiments with JBC and other services
■	490	Plan and integrate for implementation of new technology initiatives
■	317	Reengineer systems under evaluation per user feedback (i.e. In-Theater Injection to broadcast services) TF/DIV XXI
Total		6537

Mission Description and Budget Item Justification This engineering and manufacturing development program funds: (1) improved medical equipment and drugs essential to counteracting lethal and human performance degrading effects of infectious diseases, and (2) medical equipment essential to meeting medical requirements on the integrated battlefield, with emphasis on decreased size/weight and high mobility, yet supporting large numbers of combat casualties. Additionally, foreign medical materiel may be procured for exploitation of advanced technology and development to meet Army medical defense goals. This program element supports the full-scale development of vaccines, prophylactic and therapeutic drugs, resuscitation fluids and drug products for Acquired Immune Deficiency Syndrome (AIDS). This program funds engineering and manufacturing development for both large and small Combat Casualty Care end items for location of casualty, diagnosis, rapid intensive care delivery, intensive care evacuation platforms, and rapidly mobile, lightweight surgical facilities and equipment. Additionally, the program element funds engineering and manufacturing development of medical equipment that provides protection against physiological, psychological or environmental factors that degrade physical performance. This includes engineering development of vision corrective devices for protective masks. This program is primarily managed by the U.S. Army Medical Research and Materiel Command. The projects in this program element support research efforts in the engineering and manufacturing development phase of the acquisition cycle and are therefore correctly placed in Budget Activity 5.

A. Mission Description and Justification: This project supports engineering development of preventive medicine materiel, including devices, pharmacologicals and other tools, to provide protection, sustainment, and enhancement of the physiological and psychological capabilities of soldiers in the face of combat operations under all environmental conditions. Focus is on reduction in the incidence of personnel losses due to preventable disease and nonbattle injuries through development of environmental and physiological performance monitors and other preventive medicine countermeasures. A major contractor is Stanford Research Institute, Palo Alto, CA.

Acquisition Strategy: Test and evaluate commercially developed materiel for hardening or other modification in government managed trials.

FY 1997 Accomplishments:

■ 838 Supported the engineering development and user evaluation of telemedicine hardware and concepts for soldier protection.
Total 838

FY 1998 Planned Program:

■ 236 Begin user testing of Personnel Information Carrier (PIC).
■ 236 Integrate Medical Situational Awareness and Control software into Combat Service Support Control System.
■ 408 Integrate hand-held computer/communications system with medical and communications equipment for the Medical Detachment, Telemedicine equipment set.
■ 22 Small Business Innovative Research/Small Business Technology Transfer Programs.
Total 902

FY 1999 Planned Program:

■ 872 Begin testing of Personnel Information Carrier necessary to obtain Food and Drug Administration (FDA) approval.
Total 872

D415 Mine Neutralization/Detection	2100	8318	26905	29389	42727	26636	24562	Continuing	Continuing

Mission Description and Budget Item Justification: This program element provides for engineering and manufacturing development of mine and countermines systems. Project D016, Mine Systems Engineering Development, provides for the increased tactical effectiveness and responsiveness of landmines by supporting the development of a minefield command and control system for the Wide Area Munition (WAM), the Intelligent Combat Outpost (Raptor), the Area Denial Artillery Munition (ADAM)/Remote Anti-Armor Mine (RAAM) Upgrade, and Non-Self-Destructing Ant-Personnel Landmine Alternatives (NSD-A). Project D415, Mine Neutralization/Detection Engineering Development, is the engineering and manufacturing development for the Airborne Standoff Minefield Detection System (ASTAMIDS), Explosive Standoff Minefield Breacher (ESMB), and Handheld Stand-off Minefield Detection System (HSTAMIDS). It provides a group of mutually supported mine detection and neutralization devices to counter a variety of threat mines, minefields and obstacles necessary for implementing the Army's Countermines Modernization Plan. This program element supports Engineering and Manufacturing Development (EMD) and is, therefore, appropriately placed in Budget Activity 5.

<p>A. <u>Mission Description and Justification:</u> Provides for engineering and manufacturing development of new smart munitions and intelligent/autonomous coordination of there use for increased effectiveness. Also addresses Presidential directive to eliminate reliance on the use of Anti-Personnel Landmines.</p> <p><u>Acquisition Strategy:</u> A command and control capability is being developed as a product improvement to Wide Area Munition (WAM) and will be incorporated into the WAM product improvement program. For Raptor, decision to go sole source or competitive will be based on evaluation of sole source PDRR contractor results. For NSD-A, 12 solicitation respondents will be requested to submit proposals for their alternative concept. CPIF contracts for two of the best concepts will be awarded for the Early User Experiment (EUE) phase. At the conclusion of the EUE one contractor will be selected to continue into the EMD and Production phases. For ADAM/RAAM ARDEC (In-house) will lead the design and development effort. A government owned Load, Assemble, and Pack (LAP) facility will develop processes and tooling for the download of ADAM and RAAM and the creation of the hybrid projectile</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 1950 Completed Receiver/Transmitter critical circuit design ■ 784 Completed ASIC design through simulation ■ 910 Built brassboard Receiver/Transmitter ■ 1598 Completed Control Station Interface specification ■ 2000 Pending ADAM/RAAM reprogramming Total 7242 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 4800 Conduct ADAM/RAAM hybrid design development ■ 500 Conduct ADAM/RAAM process prove-out testing ■ 200 Initiate ADAM/RAAM Technical Test planning Total 5500

Engineering Development**

COST (<i>In Thousands</i>)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	9677	10847	20813	12873	1960	0	0	0	992979
D2ST SADARM Operational Test	292	5032	0	0	0	0	0	0	5324
D644 Generic SADARM Engineering Development	9385	5815	20813	12873	1960	0	0	0	987655

Mission Description and Budget Item Justification: Sense and Destroy Armor (SADARM) munitions will provide an enhanced fire/counterfire capability for 155mm howitzer delivery systems. SADARM can attack targets well beyond the Forward Line of Troops (FLOT) in a fire-and-forget mode. SADARM can be used in day and night, inclement weather and degraded battlefield conditions.

These capabilities will be enhanced by the SADARM Product Improvement (PI) program which began in FY 1997. The PI SADARM submunition will have an enlarged footprint (permitting each submunition to cover approximately three times the area of the baseline SADARM), improved infrared sensor to see targets at higher altitudes, and a combined effects (multi-frag) warhead permitting it to kill more targets. As a result, the PI SADARM will be more effective against its primary target (self-propelled howitzers) and secondary targets (light and heavy missile launchers, surface-to-air missile sites, air defense units, surface-to-surface missiles and towed howitzers). When ejected from the 155mm projectile, the PI SADARM submunitions deploy and descend toward the ground at a constant velocity and spin rate. The submunitions contain an improved sensing mechanism which combines a dual-mode millimeter wave sensor with an improved infrared sensor array. If a target is present within the scan area (approximately 53,000 square meters or 12 football fields), the submunition detects and destroys the target with the new combined effects warhead.

The projects within this Program Element support research efforts in the engineering and manufacturing development phase of the acquisition strategy and are, therefore, correctly placed in Budget Activity 5.

<p>A. <u>Mission Description and Justification:</u> This project finances the direct costs of planning and conducting operational test and evaluation of the Sense and Destroy Armor (SADARM) munitions by the Operational Test and Evaluation Command (OPTEC). SADARM is an Acquisition Category (ACAT) IC system with an Initial Operational Test and Evaluation (IOTE) in FY 1998. Operational testing is conducted under conditions that approximate, as closely as possible, those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system. Project D2ST was restructured from SSN E66300, Projectile, Artillery, 155mm SADARM, M898, Procurement Ammunition, Army.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%; text-align: right;">292</td> <td>Conducted planning and preparation for test during the 4Q FY 1998 IOTE .</td> </tr> <tr> <td>Total</td> <td style="text-align: right;">292</td> <td></td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%; text-align: right;">4906</td> <td>IOTE 4Q FY 1998</td> </tr> <tr> <td>■</td> <td style="text-align: right;">126</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs</td> </tr> <tr> <td>Total</td> <td style="text-align: right;">5032</td> <td></td> </tr> </table> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: right;"><u>FY 1997</u></th> <th style="text-align: right;"><u>FY 1998</u></th> <th style="text-align: right;"><u>FY 1999</u></th> </tr> </thead> <tbody> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: right;">300</td> <td style="text-align: right;">5494</td> <td style="text-align: right;">0</td> </tr> <tr> <td>Appropriated Value</td> <td style="text-align: right;">309</td> <td style="text-align: right;">5494</td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td style="text-align: right;">-17</td> <td style="text-align: right;">-462</td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: right;">292</td> <td style="text-align: right;">5032</td> <td style="text-align: right;">0</td> </tr> </tbody> </table> <p style="margin-left: 40px;">Change Summary Explanation: Funding: FY 1998 – Undistributed congressional reductions (-462).</p> <p>C. <u>Other Program Funding Summary:</u> None</p>										■	292	Conducted planning and preparation for test during the 4Q FY 1998 IOTE . <p>A. <u>Mission Description and Justification:</u> Sense and Destroy Armor (SADARM)</p> <p>Acquisition Strategy - R&D: The cost plus incentive fee (CPIF) contracts were awarded in FY 1986 to Aerojet Electrosystems and Honeywell. In FY 1991, a design select eliminated the Honeywell competition. Aerojet then selected Honeywell (now Alliant Techsystems) as their prime sub-contractor and they have continued this relationship into production. The Engineering and Manufacturing Development contract with Aerojet has been completed. A contract was awarded in the 2QTR FY 1997 for a product improvement to the basic SADARM. This effort will focus on expanding the lethal search area of the submunition and improving its ability to kill targets.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 640 Hardware in-the-loop support provided ■ 1750 Initial/design planning for combined effects warhead completed ■ 4000 Trade studies and test for electronics sensor/software performed ■ 850 Test hardware ■ 2145 Government support and development of initial test criteria/schedules/plans provided Total 9385 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 100 Hardware in-the-loop support ■ 1500 Design of the combined effects warhead ■ 2320 Electronic sensor software development ■ 680 Test hardware ■ 1069 Government support to development ■ 146 Small Business Innovative Research/Small Business Technology Transfer Programs Total 5815 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> ■ 750 Hardware in-the-loop support ■ 3400 Design of the combined effects warhead

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604816A Longbow					
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	10762	0	0	0	0	0	0	0	575173
DC31 Longbow - Apache	4775	0	0	0	0	0	0	0	555999
DC87 Longbow - Apache TESS	5987	0	0	0	0	0	0	0	19174

Mission Description and Budget Item Justification: Longbow will provide the AH-64 with a fire-and-forget Hellfire capability, greatly increasing weapon system effectiveness and aircraft survivability. The weapon system will be employable by day or night, in adverse weather, and in countermeasures environments. Project DC31 includes the efforts necessary to synchronize the integration of the Fire Control Radar (FCR) and the Radio Frequency (RF) missile onto the Apache aircraft. It includes two versions of the Longbow Apache AH-64D series aircraft: (1) the AH-64D with the FCR mission kit plus the upgraded 701C engine, and (2) the AH-64D without the FCR mission kit and engine upgrade. Funds were added to Project DC31 in FY97 for Second Generation Forward Looking Infrared (FLIR). Project DC87 provides funding for the Longbow Apache Tactical Engagement Simulation System (TESS). The TESS will perform RF missile simulations in addition to the functions of the Multiple Integrated Laser Engagement System/Air-to-Ground Engagement System for force-on-force collective training after fielding. Project DC87 also includes follow-on development of the Longbow Crew Trainer. The projects in this Program Element support research efforts started in the engineering and manufacturing development phase of the acquisition strategy and are, therefore, correctly placed in Budget Activity 5.

DC31 Longbow - Apache	4775	0	0	0	0	0	0	0	555999																																														
<p>A. Mission Description and Justification The Longbow program encompasses modifications to the AH-64 Apache as well as upgrades to the aircraft systems for the AH-64D series to efficiently and effectively integrate the FCR and RF missile. The system provides an adverse weather fire-and-forget missile capability that increases the AH-64 lethality and survivability. The Longbow Apache also retains the capability to fire the Semi-Active Laser Hellfire. The greatly improved design increases the operational capability of the crew and provides increased lethality and survivability, while complying with Congressional direction to standardize the fleet to a common configuration. The Second Generation FLIR will significantly enhance the night vision capabilities of the Apache. This improvement will maximize the probability of hit/kill, while minimizing the potential for fratricide.</p> <p>Acquisition Strategy: The acquisition strategy involves a sole source contract during the Engineering and Manufacturing Development phase leading to a production contract in FY 96. The Second Generation FLIR demonstration effort will be sole source to Lockheed Martin in FY97.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 10%;">■</td> <td style="width: 10%;">4775</td> <td>Second Generation FLIR (Forward Looking Infrared) Development; Flight Demonstration</td> </tr> <tr> <td>Total</td> <td>4775</td> <td></td> </tr> </table> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. D902 Dismounted Soldier CID	900	1946	5566	0	0	0	0	0	8412

Mission Description and Budget Item Justification: The world situation and modern warfare are evolving in a manner that dictates making reliable identification of friends, foes, and neutrals an absolute necessity, but increasingly difficult to achieve. The ability of weapons systems to engage targets at ranges longer than the capability to positively identify them significantly increases the potential for fratricide. This Program Element (PE) is directed toward the design and development of distinct technology devices to help minimize this battlefield deficiency. The projects within this PE are in the Engineering and Manufacturing Development (EMD) phase and the PE is correctly assigned in Budget Activity 5. Project D482 addresses the ground-to-ground vehicle mounted mission area; Project D901 addresses improvement of tactics, techniques and procedures across all mission areas; and Project D902 addresses the ground-to-ground dismounted mission area.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604817A Combat Identification - Engineering & Manufacturing Development				PROJECT D482	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D482 Ground Combat Identification EMD	13228	14170	7905	7032	2010	0	0	0	123126
<p>A. <u>Mission Description and Justification:</u> The Battlefield Combat Identification System (BCIS) is an all weather, day/night, millimeter wave, Low Probability of Intercept/Low Probability of Detection (LPI/LPD), digitally encrypted question and answer system that provides positive identification of friendly platforms out to 5.5 km (clear weather). BCIS was developed to minimize fratricide while maximizing combat effectiveness given rapidly changing and intense tactical situations. BCIS provides positive identification of friendly platforms to aid the gunner or commander to make a rapid shoot/don't shoot decision at the point of engagement. BCIS also provides short range (out to 1 km, in clear weather), LPI/LPD situational awareness messages at the platoon level. Any situational awareness data received by BCIS will be sent through the platform Applique for integration with other position sources to form the full situational awareness database.</p> <p><u>Acquisition Strategy:</u> A competitive, cost plus award fee contract, for 46 EMD units and option quantities, was awarded Aug 93. An additional 65 units were procured for participation in TF XXI AWE and the Combat ID International Demonstration. This contract has been modified to include follow-on producibility engineering and test efforts for a Low Cost Design for the BCIS, Production Qualification Test (PQT), and Initial Operational Testing (IOT) that will lead to a Milestone III decision in 4Q 99.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 3185 Provided technical, integration, training and maintenance support for TF XXI experiment. ■ 2372 Completed Producibility Engineering (PE) study and design effort. ■ 5171 Initiated fabrication, assembly and test of four Low Cost Producibility models. ■ 2500 Develop/update system software for Low Cost Producibility models. Total 13228 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 2659 Initiate development, design, and fabrication of installation kits (A kit) for the Abrams (M1A1)/Bradley (M2 ODS) for IOT. ■ 2005 Complete fabrication, assembly and test of four PE models. ■ 530 Conduct US/French Interoperability Testing. ■ 8640 Initiate fabrication, assembly and test of Initial Operational Test (IOT) hardware (B kit).) ■ 336 Small Business Innovative Research/Small Business Technology Transfer Programs. D901 All Service Combat ID Evaluation Team	2761	2910	0	0	0	0	0	0	5671
<p>A. <u>Mission Description and Justification:</u> All Service Combat Identification Evaluation Team (ASCIET) Support. ASCIET is an expanded effort aimed at fostering improved tactics, techniques, and procedures (TTP) across all combat identification mission areas. The Army, Navy, Air Force and Marine Corps are designated as the participating Services with the Air Force designated as the lead Service. ASCIET is chartered to employ the equipment and personnel of all Services to evaluate, investigate and assess various concepts of combat identification on the battlefield. ASCIET will also offer Federally Funded Research and Development Centers (FFRDCs), Service Battle Laboratories, and industry the opportunity to review and evaluate emerging technologies in multi-Service environment on a noninterference basis as a risk reduction and verification. ASCIET began in FY 95 as an effort to evaluate and revise joint TTP using current and new combat ID systems and technologies in a field environment. ASCIET was previously funded through Project D482. Restructuring was required because ASCIET is an independent effort from the BCIS EMD work.</p> <p><u>Acquisition Strategy:</u> Not applicable</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> █ 1519 Demonstrated A-G target identification capability for rotary wing (AH-1W) Cobra helicopter. █ 818 Demonstrated direct target ID capability for fixed wing (AV-8B). █ 424 Demonstrated automated "nine line" message generation utilizing Automatic Target Hand-off System (ATHS) II data link to locate and identify targets for fixed wing aircraft. <p>Total 2761</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> █ 750 Assess joint C3I interoperability. █ 750 Assess surface-air and air-air CI capabilities in joint environment. █ 1337 Evaluate surface-air, air-ground, ground-ground CI systems. 73 Small Business Innovative Research/Small Business Technology Transfer Program <p>Total 2910</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p>

D902 Dismounted Soldier CID	900	1946	5566	0	0	0	0	0	8412
<p>A. <u>Mission Description and Justification:</u> The Combat Identification System for the Dismounted Soldier (CIDDS) is a lightweight, laser-based, question and answer type system, used to positively identify friendly soldiers. The system includes a compact, eyesafe, diode laser interrogator; a laser detector assembly; an electronic processor unit; and an omni-directional RF responder. The laser transmitter also includes a near infrared aiming laser pointer for aiming the soldier's weapon at night when using Night Vision Goggles and provides an embedded training capability that is interoperable with MILES/MILES 2000. The system will provide range of at least 1.1 kilometers under clear weather conditions and will exceed the soldier's target acquisition capability under degraded atmospheric conditions. It will have sufficient angular resolution to resolve individual targets, but does not require precise pointing accuracy for robust response. The system will also be directly interoperable with the integrated soldier-to-soldier combat ID functions to be embedded in the Land Warrior equipment suite. The system will fulfill requirements stated in the Operational Requirements Document for use by Army, Marine and Special Operations applications.</p> <p><u>Acquisition Strategy:</u> A competitive, cost plus incentive fee contract for delivery and testing of approximately 150 units for IOT.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 500 Initiated hardware design effort ■ 200 Initiated software design effort ■ 200 Initiated weapons integration kit design Total 900 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 250 Continue weapons integration kit design ■ 1647 Continue hardware and software design ■ 0 Initiate MILES/MILES 2000 interoperability/integration effort ■ 0 Initiate Near IR aiming laser pointer interoperability/integration effort ■ 49 Small Business Innovative Research/Small Business Technology Transfer Programs Total 1946

Mission Description and Budget Item Justification: The umbrella program to exploit automation technology for the conduct of combat operations is the Army Tactical Command and Control System (ATCCS) program which is a component of the Army Battle Command System (ABCS). The ATCCS program provides automation in the five battlefield functional areas (BFAs) with the following specific systems: (1) Maneuver Control System (MCS); (2) Advanced Field Artillery Tactical Data System (AFATDS); (3) All Source Analysis System (ASAS) for Intelligence/Electronic Warfare; (4) Forward Area Air Defense Command, Control and Intelligence System (FAADC2I); and (5) Combat Service Support Control System (CSSCS) and to other Army Joint and Allied systems. To provide an overall technically sound, cost effective, and operationally responsive approach, the design and development of ATCCS must be accomplished on a total systems basis. The ATCCS Engineering program provides the required systems engineering to assure integrated Army tactical command and control, and the utilization of common hardware and software throughout the five ATCCS nodal systems. This project includes the Central Technical Support Facility(CTSF) which provides a single technical "center of mass" for software checkout and physical system integration. The Common Hardware Software (CHS) project provides common hardware and software to customers to meet their developmental and fielding needs. The Tactical Operations Centers(TOCs) project designs and develops the TOCs that form the structural backbone of the Army's digitized fielding concept. The projects in this program element support the ATCCS programs which, for the most part, are in the engineering and manufacturing development phase of the acquisition process and, therefore, are correctly placed in Budget Activity 5.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604818A Army Tactical Command and Control Hardware & Software				PROJECT DC34	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DC34 Army Tactical C2 Systems(ATCCS) Engineering	11236	7706	15968	18682	17222	17687	18009	Continuing	Continuing
<p>A. <u>Mission Description and Budget Item Justification:</u> Project DC34 – Army Tactical C2 Systems(ATCCS) Engineering: The Air/Land Battle Doctrine requires military leaders to make sound and timely command and control decisions to direct the activities of assigned and supporting units. The umbrella program to exploit automation technology in support of this mission is the ATCCS program, a component of the Army Battle Command System(ABCS). The effort to achieve horizontal integration of the ATCCS BFAs, although going on independently in each BFA, was not disciplined enough to address all connections and needs within the entire spectra of command, control, and communications. Therefore, to ensure this horizontal integration effort is complete and fully automated, a significant management, systems engineering and integration effort is required. A key component of the overall effort is the Central Technical Support Facility(CTSF) which provides a centralized on-the-ground capability to ensure interoperability among various digitized platforms and serves as the final integration and maturation facility for Common Operating Environment(COE). The CTSF acts as an enabler for rapid integration of dissimilar software and hardware systems through real time on-site integration of soldiers, contractors, testers, Program Managers, and the requirements community. The CTSF provides a single technical “center of mass” for software checkout and system integration and provides a controlled environment with connectivity to other C4I systems either on-site or through the Army Interoperability Network(AIN) to support digital integration and fielding.</p> <p><u>Acquisition Strategy:</u> This project provides the technical and programmatic disciplines required for systems engineering and integration, experimentation, acquisition management, testing, software development, interoperability, fielding, and sustainment to insure an interoperable and affordable ATCCS. The Program Executive Officer for Command , Control, and Communications(PEO C3S) has planned an evolutionary approach to fielding ATCCS as soon as possible.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 500 Performed functional analysis and update command post analysis to support ABCS and AWE ■ 900 Implemented the ABCS data architecture and standardization program in all Battlefield Functional Areas(BFA) to facilitate Army Technical Architecture(ATA) compliance ■ 1245 Continued ABCS/AWE system level training and logistics development ■ 3415 Continued ABCS/AWE interoperability engineering and system level engineering support ■ 1381 Conducted/supported system configuration development/operational demonstrations in conjunction with MCS LUT and other BFA Ots ■ 500 Developed the ABCS security architecture to support Division 2000 ■ 3295 Army Technical Architecture definition and compliance Total 11236

PROJECT

DC34**FY 1998 Planned Program:**

■	300	Perform functional analysis and update command post analysis to support ABCS
■	1250	Continue ABCS/AWE system level training and logistics development
■	3213	Continue ABCS/AWE interoperability engineering and system level engineering support/perform dependency analyses and verification and validation of all BFA fielded software, including common and unique applications
■	1450	Conduct and support system configuration development/operational demonstrations in conjunction with BFA tests
■	800	Implement the ABCS data architecture and standardization program for all BFAs to facilitate ATA compliance
■	500	Develop and implement the ABCS security architecture
■	193	Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)
Total	7706	

FY 1999 Planned Program:

■	300	Perform functional analysis and update command post analysis to support ABCS
■	1200	Continue ABCS/AWE system level training and logistics development
■	3540	Continue ABCS/AWE interoperability engineering and system level engineering support/perform dependency analyses and verification and validation of all BFA fielded software, including common and unique applications
■	1450	Conduct and support system configuration development/operational demonstrations in conjunction with BFA tests
■	800	Continue to implement the ABCS data architecture and standardization program for all BFAs to facilitate ATA compliance
■	500	Continue to develop and implement the ABCS security architecture
■	8178	Central Technical Support Facility(CTSF) efforts to meet the Army's digital fielding requirements
Total	15968	

B. Project Change Summary

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
FY1998/1999 President's Budget	8159	7951	7790
Appropriated Value	7960	7951	
Adjustments to Appropriated Value	+3276	-245	
FY1999 President's Budget	11236	7706	15968

Change Summary Explanation:

Funding: FY97 (+3276) for an increase for Army Technical Architecture definition and compliance.
FY99 (+8178) funding increase supports CTSF efforts to meet the Army's digitization efforts.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604818A Army Tactical Command and Control Hardware & Software				PROJECT D323	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D323 Common Hardware Software (CHS)	24259	11478	10961	11459	11543	13430	13615	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> Project D323 Common Hardware Software (CHS): CHS is the program through which the Army builds its integrated efforts for tying together the Army Command and Control Systems. The project provides vehicles (contracts) through which customers can acquire state-of-the-art common hardware/software and associated peripherals to meet developmental and fielding needs. The project also provides software technology support and command post internal structures within shelters. The common software supports Army, other Services and Joint systems. The CHS program is instrumental in digitizing the battlefield.</p> <p><u>Acquisition Strategy:</u> The overall goal is to improve interoperability and lower life cycle costs by standardizing Battlefield Command and Control (C2) automation through centralized buys of non-developmental items (NDI), standardized protocols and reusable software. Four NDI hardware versions are available to meet specific needs of each Battlefield Functional Area (BFA): handheld, portable, transportable and lightweight computer unit.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> ■ 1797 Continued management of the acquisition and delivery of CHS equipment (LCU/CHS-1/CHS-2) in support of customer requirements ■ 3704 Continued execution of common hardware, software technology and command post programs ■ 483 Continued supporting customers testing efforts with CHS equipment ■ 605 Continued exploring state of the art technology insertion in support of ABCS ■ 870 Developed, integrated and upgraded Defense Information Infrastructure (DII) Common Operating Environment (COE) products ■ 7200 TOC design, development, and technology assessment ■ 9600 CTSF efforts in support of the Army digitization plan Total 24259 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> ■ 1350 Continue management of the acquisition and delivery of CHS equipment (LCU/CHS-2) in support of customer requirements ■ 3150 Continue execution of common hardware, software technology and software reuse programs ■ 575 Continue supporting customers testing efforts with CHS equipment ■ 610 Continue the exploration of state of the art technology insertion in support of ABCS programs ■ 5548 Continue developing and upgrading DII COE products/integrate into ABCS systems ■ 245 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)

DE10 Sentinel (FAAD GBS)	0	0	2786	5544	8593	8186	0	0	25109																																			
<p>A. <u>Mission Description and Budget Item Justification:</u> The Sentinel, AN/MPQ-64, consists of a radar-based sensor with its prime mover/power, identification friend or foe (IFF), and FAAD Command, Control, and Intelligence (C2I) interfaces. The sensor is an advanced three-dimensional battlefield X-Band air defense phased-array radar with an instrumented range of 40 km. The Sentinel is capable of operating day or night, in adverse weather conditions, in the battlefield environments of dust, smoke aerosols, and enemy countermeasures. It provides 360 degree azimuth coverage for acquisition tracking. The Sentinel contributes to the digital battlefield by automatically detecting, classifying, identifying, and reporting targets (cruise missiles, and unmanned aerial vehicles, rotary wing and fixed wing aircraft). A Pre-Planned Product Improvement (P3I) Program, which will improve Sentinel's capability against evolving threats, begins in FY99. The P3I will provide increased capabilities for the Sentinel to keep abreast of the evolving technological threat of small radar cross-section targets such as cruise missiles and unmanned aerial vehicles. The P3I will compensate for the evolving threat and ensure that the division air picture and target cues are maintained at maximum effective acquisition ranges. This project is related to an engineering and manufacturing development program and is therefore correctly placed in BA 5.</p> <p><u>Acquisition Strategy:</u> The pre-planned product improvement is currently planned as a sole source contract award to the production manufacturer.</p> <p>FY 1997 Accomplishments: Project not funded in FY 97</p> <p>FY 1998 Planned Program: Project not funded in FY 98</p> <p>FY 1999 Planned Program:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 10px;">■</td> <td style="width: 50px;">1598</td> <td>Conduct Transmitter Prototype Design and Development</td> </tr> <tr> <td>■</td> <td>401</td> <td>Test Bed System Upgrade</td> </tr> <tr> <td>■</td> <td>495</td> <td>Integration and Test</td> </tr> <tr> <td>■</td> <td>292</td> <td>Design and Fabrication of Developmental Tooling.</td> </tr> <tr> <td colspan="2">Total</td> <td>2786</td> </tr> </table> <p>B. <u>Project Change Summary</u></p> <table style="width: 100%; border: none;"> <tr> <th></th> <th style="text-align: center;"><u>FY 1997</u></th> <th style="text-align: center;"><u>FY 1998</u></th> <th style="text-align: center;"><u>FY 1999</u></th> </tr> <tr> <td>FY 1998/1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> <tr> <td>Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Adjustments to Appropriated Value</td> <td></td> <td></td> <td></td> </tr> <tr> <td>FY 1999 President's Budget</td> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> <td style="text-align: center;">2786</td> </tr> </table>										■	1598	Conduct Transmitter Prototype Design and Development	■	401	Test Bed System Upgrade	■	495	Integration and Test	■	292	Design and Fabrication of Developmental Tooling. Change Summary Explanation: Schedule – As a result of Congressional increases in procurement funding, the Sentinel production program has been accelerated. The RDT&E funds in FY99 (+2786) for the Pre-Planned Product Improvement (P3I) program ensures efficient schedule alignment of the P3I program with the production capability. These funds prevent both a loss of production capability and an increase in cost.

<p>A. Mission Description and Budget Item Justification: The Firefinder Block II Pre-Planned Product Improvement (P3I) program will replace the AN/TPQ-37 Artillery Locating Radar. This program is in response to the approved Mission Need Statement (MNS) for the Advanced Firefinder System which describes an urgent need for a more survivable, longer range and less manpower intensive radar. An Operational Requirements Document (ORD) for Firefinder AN/TPQ-37 Block II was approved 25 Sep 96. Firefinder Block II will double the current range performance and improve the target throughput to 50 targets per minute in a highly mobile, transportable and survivable system. The Firefinder Block II will be capable of missile detection at maximum ranges of 150-300 km and will be capable of interfacing with Theater Missile Defense Systems. The system will be capable of C-130 roll-on/roll-off transportability for rapid deployment. Crew size will be reduced. This program will leverage off the AN/TPQ-36(V)8 Electronics Upgrade program by using the same man-machine interface. The Firefinder Block II will be integrated into the targeting structure by interfacing with the Advanced Field Artillery Tactical Data System (AFATDS).</p> <p>Acquisition Strategy: A competitive EMD contract will be awarded for the Firefinder Block II program. Award is scheduled for April 1998.</p> <p>FY 1997 Accomplishments:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 10%;">891</td> <td>Awarded multiple study contracts for evaluation of program risks and cost/performance trade-offs</td> </tr> <tr> <td>■</td> <td>343</td> <td>Prepared program and cost documentation to support a Milestone II decision</td> </tr> <tr> <td>■</td> <td>437</td> <td>Prepared Analysis of Alternatives (AOA) and Threat Analysis</td> </tr> <tr> <td>■</td> <td>509</td> <td>Prepared and released draft solicitation for industry comment</td> </tr> <tr> <td>■</td> <td>250</td> <td>Initiated development of simulator to model radar capabilities</td> </tr> <tr> <td colspan="2">Total</td> <td>2430</td> </tr> </table> <p>FY 1998 Planned Program:</p> <table style="width: 100%;"> <tr> <td style="width: 5%;">■</td> <td style="width: 10%;">222</td> <td>Complete development of simulator to support evaluation of radar performance</td> </tr> <tr> <td>■</td> <td>185</td> <td>Finalize and issue solicitation for EMD contract award</td> </tr> <tr> <td>■</td> <td>620</td> <td>Conduct Source Selection Evaluation Board (SSEB)</td> </tr> <tr> <td>■</td> <td>1394</td> <td>Award EMD contract and initiate hardware/software design of new radar</td> </tr> <tr> <td>■</td> <td>63</td> <td>Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)</td> </tr> <tr> <td colspan="2">Total</td> <td>2484</td> </tr> </table>										■	891	Awarded multiple study contracts for evaluation of program risks and cost/performance trade-offs	■	343	Prepared program and cost documentation to support a Milestone II decision	■	437	Prepared Analysis of Alternatives (AOA) and Threat Analysis	■	509	Prepared and released draft solicitation for industry comment	■	250	Initiated development of simulator to model radar capabilities	Total		2430	■	222	Complete development of simulator to support evaluation of radar performance	■	185	Finalize and issue solicitation for EMD contract award	■	620	Conduct Source Selection Evaluation Board (SSEB)	■	1394	Award EMD contract and initiate hardware/software design of new radar	■	63	Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)	Total		2484

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)							DATE February 1998		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604824A Commercial Operating & Support Savings Initiative (COSSI)				PROJECT D112	
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D112 Commercial Operating & Support Savings Initiative	0	0	33600	31800	31850	31800	31900	Continuing	Continuing
<p><u>Mission Description and Budget Item Justification:</u> The mission of Commercial Operations and Support Savings Initiative (COSSI) is to develop and test a method for reducing Army Operations and Support (O&S) costs by routinely inserting commercial items into fielded military systems. The insertion of commercial items is expected to reduce O&S costs by reducing the costs of parts and maintenance, reducing the need for specialized equipment, increasing reliability, and increasing the efficiency of subsystems. An appropriate fielded military system is one that has some current operational capability and is not near the end of its useful life. Selected proposals will develop, manufacture, and deliver prototype "kits" to the military for installation into a fielded Army system. Each kit will consist of a commercial item, or a combination of items, and readied for insertion or use in a fielded military system. COSSI seeks proposals submitted by firms or teams that include at least one for-profit firm. Proposals must also include the written support of a "Military Customer" who has the authority to modify the system and purchase the kits. COSSI is a two-stage process. In Stage 1 of each selected project, COSSI and the chosen proposer will share the costs of developing and testing the kit, with the proposer contributing at least 25% of the estimated costs of Stage 1. If Stage 1 is successful, Stage II will be initiated. In Stage II, the military customer may then purchase reasonable production quantities of the kit. Payment for the kits and their insertion into the fielded system will be the responsibility of the military customer. Prior to FY1999, COSSI was funded in DOD PE 0603805E.</p> <p>This program element is assigned to budget activity 5 since it involves the engineering and manufacturing development necessary to integrate commercial items with already fielded systems.</p> <p>FY 1997 Accomplishments: Program funded in DOD PE 0603805E.</p> <p>FY 1998 Planned Program: Program funded in DOD PE 0603805E.</p> <p>FY 1999 Planned Program: FY 1999 Planned Program: FY 1999 funding will be for new Stage I COSSI projects. Some examples of possible Stage I efforts are improved inspection/testing techniques, information processing and distribution, automated software change distribution, automated condition assessment and reporting, inventory tracking/asset visibility, interactive electronic technical manuals, embedded training/distance learning, component refurbishing techniques, equipment power reduction, calibration and measurement techniques, modeling and simulation, and voice activation. Any idea to reduce the Operations and Support costs of fielded military systems by inserting a commercial item while maintaining or improving its operation is a possible COSSI Stage I project.</p> <p>■ 33600 - Develop, manufacture and deliver cost savings initiatives in the area of product re-engineering</p>

Mission Description and Budget Item Justification: This program element supports the engineering and manufacturing development efforts for the Crusader-ED program and Crusader Operational Test. The Light Weight (LW) 155mm Towed Howitzer, a joint program with the Marine Corps, will provide the replacement for the M198, 155mm Howitzer and achieve significant strategic and tactical mobility improvements. The projects in this program support research efforts in the engineering and manufacturing development phases of the acquisition strategy and are therefore correctly placed in Budget Activity 5.
