The Lightweight 155mm Towed Howitzer (LW155) is a Joint USMC/Army Program. A 40% reduction in weight compared to the current system allows for greater strategic and tactical mobility while improving range, weapon stability, accuracy, and durability. Significantly improved battlefield mobility creates a weapon that is more survivable and lethal. The LW155 has a digital fire control system but retains conventional fire control as a backup. The digital fire control will enable the LW155 Howitzer to emplace faster and without survey, aiming posts or an aiming circle. Digital communications and an on-board antenna eliminate the need for wire to the Fire Direction Center and will increase dispersion and survivability on the battlefield. Modifications to the existing prime mover will enable the howitzer unit to navigate, recharge the system and receive fire missions, all while moving to the next firing position.

The PM is working closely with PM Excalibur to incorporate Excalibur precision Global Positioning System/Inertial Navigation Unit (GPS/INU) guided 155mm projectile compatibility by 4QFY06. LW155 will be the first platform to fire Excalibur, which will provide precision strike capability (10 meter accuracy) out to ranges of 40 kilometers.

Justification:

FY 2006/2007 procures 92 Lightweight 155mm Towed Howitzers (LW155). This quantity and the Army's overall procurement of LW155s are planned as a joint multi-year procurement with the United States Marine Corps for FY05-FY08. LW155 replaces the M198 Towed Howitzer for the U.S. Army and USMC. It must be procured in FY05 to begin replacing the aging, heavier M198 howitzer. The LW155 will be the cannon fire support for the Army's Stryker Brigade Combat Teams.

The United Kingdom and Italy are participating in the development of the LW155 under an MOU and the UK has signed a production MOU with the US.

Note: For years FY07 through FY09, funding has been added to cover a \$371 thousand dollar unit cost increase resulting from changes in exchange rates and increases in industrial commodity prices. This funding increase is reflected in FY07(+\$25 million), FY08(\$+58 million), and FY09(+\$3.5 million). These funds will come from the Guided MLRS Rocket (GLMRS) program funded in the Missile Procurement Army appropriation. This increase is not reflected in the printed FYDP and Procurement Annex. The Guided MLRS Rocket budget document has also been footnoted.

The total production quantity reflected in these exhibits remains the same as those in the Procurement Annex; however, there is a slight variation in the FY05-FY07 quantity totals to satisfy production requirements of both the Army and Marine Corps on this Joint multiyear program.

The MK-19 Mod 3 is a self-powered, air-cooled, blowback operated, 40mm automatic grenade machine gun capable of a firing rate of 325-375 rounds per minute. It is used to engage point targets up to 1500 meters and provide suppressive fire at ranges up to 2200 meters. Since the initial fielding of the MK-19, various system enhancements have been identified that further improve the system by increasing operational capabilities and improving reliability, readiness, maintainability, and safety. These improvements include a lightweight adjustable sight bracket; a weapon-sight bracket interface; improved firing pin sear with modified firing pin; an adjustable secondary drive lever; and, a new start Tactical Engagement Simulator (TES) to support Force-on-Force Training.

Justification:

FY 2006/2007 procures the Lightweight Adjustable Sight Bracket, continues fielding and installation of the MK-19 Modification Kit, and initiates activities for the MK-19 TES. The MK-19 will be mounted on various vehicles and on the M3 tripod for ground mounted applications. It will replace select M2 .50 Cal and M60 7.62mm machine guns in mechanized, light infantry, engineer, military police, and other combat support and combat service support units. The adjustable sight bracket will provide a means of mounting light accessories (laser pointer/designator, combat ID, optics) on the MK-19. When attached to the MK-19, the sight base will provide a mounting interface for various fire control and night vision devices. The improved firing pin sear with modified firing pin will increase the parts life of the sear. The adjustable secondary drive lever improves maintainability and readiness of the MK-19 by lowering the level of maintenance and ease of feed slide adjustment. The TES provides Army units with the ability to realistically "train as they fight" by simulating force-on-force engagements in order to improve the user's effectiveness with this weapon system.

	INDIVIDUAL MODIFICATION	Date:	February 2005
MODIFICATION TITLE: Tactical Engagement Simulator (TES) [MOD 2] TBD2			
MODELS OF SYSTEM AFFECTED: MK-19 Grenade Machine Gun			
DESCRIPTION/JUSTIFICATION:			
Tactical Engagement Simulator (TES) The TES is a non-line of sight device which simulates the ballistic during force-on-force engagements.	characteristics of the MK-19 GMG. It	serves as a training device	ce to provide realistic training

Wpn Sys Proc U/C												

The M4 Carbine Modification Program provides a close combat optic, an improved buttstock, and a modular weapon suite. The modular weapon suite includes a rail system, a top carry sling, a flashlight mount, a quick attach bracket kit for the M203 Grenade Launcher, and a permanently fixed back-up iron sight. It also provides the capability for firing the M203A1 Grenade Launcher (GL) with the M4 Carbine.

Justification:

FY2006/2007 procures M4 Modular Weapon Systems (MWS), Close Combat Optics (CCO), Close Quarters Battle Kit (New Start), and a Designated Marksmanship Sight (New Start). The modular weapon system is a key component of Soldier Lethality and allows the combat commander to custom configure weapons based upon the mission. The permanent back-up rear operative iron sight provides that capability in the event it becomes immediately necessary. The close combat optic allows the soldier to fire a weapon with both eyes open allowing greater awareness of events happening in close proximity and improves hit probability in daylight, low light level, wet weather and other adverse conditions. The close quarters battle kit provides the Soldier with multiple low cost items to increase lethality and survivability with the M4 carbine and/or M16A4 rifle.

In support of Operation Iraqi Freedom (OIF) and Operation Enduring Freedom (OEF), additional items are being procured for the Rapid Fielding Initiative (RFI). The RFI provides new equipment to units being deployed. These items include the CCO, Magnified Optics, Tactical Weapon Lights, Bipods, Forward Grips, Cleaning Kits, Improved Buttstocks, and Slings.

FY05 funding does not include \$34.8 million for the Force Protection/Urgent Need Equipping Reprogramming done in support of Operation Iraqi Freedom.

MODIFICATION TITLE: Modular Weapon System [MOD 1] TBD1

MODELS OF SYSTEM AFFECTED: M4 Carbine (5.56mm)

DESCRIPTION/JUSTIFICATION:

The modular weapon is a system of mounting rails/methods to allow the custom configuration of M4 Carbines with ancillary items such as optics, night sights, Infrared (IR) laser pointers, the grenade launcher, etc. based upon mission requirements. The Modular Weapon System includes the adapter rail system, Close Quarters Battle (CQB) sling, back-up iron sight and weapon flashlight mount.

MODIFICATION TITLE: Close Quarters Battle Kit [MOD 3] TBD3

MODELS OF SYSTEM AFFECTED: M4 Carbine (5.56mm)

DESCRIPTION/JUSTIFICATION:

The Close Quarters Battle Kit provides the Soldier with multiple low cost items to increase lethality and survivability with individual weapons. The Close Quarters Battle Kit will provide but not be limited to the following items: low profile bipods; cleaning kits; improved magazines; magazine pouches; multiple magazine holders with storage pouches; forward rail brackets; improved weapon slings; and spray on weapon camouflage.

The M249 Squad Automatic Weapon (SAW) is a 5.56mm, lightweight machine gun that can be utilized in either the automatic rifle role or light machine gun role. Various system enhancements have been identified that further improves the use of this weapon system by increasing functionality and performance capabilities. These include the addition of a feedtray cover rail and forward rail assemblies. Addition of these rails provides a MIL-STD-1913 interface allowing the mounting of standard military optics and other target designation devices directly to the machine gun. Improved components include an improved collapsible buttstock, improved bipod and 200-round ammunition pack. Other items being procured to enhance Soldier performance include a Light Weight Ground Mount and Short Barrel. In support of Operation Iraqi Freedom (OIF) and Operation Enduring Freedom (OEF) additional items (such as pistol grips, rail covers, ammo packs, spare barrel bags etc.,) are being procured for the Rapid Fielding Initiative (RFI). The RFI provides new equipment to units deployed.

Justification:

FY2006/2007 procures Improved Bipods, Improved Collapsible Buttstocks and Light Weight Ground Mounts. The Improved Bipod is stronger than the existing bipod, allows the Soldier better adjustability and is compatible with the accessory rail kit. The Improved Collapsible Buttstock provides the Soldier improved ergonomics resulting in greater target acquisition. The M192 Light Weight Ground Mount, which weighs 11.4 pounds, will reduce the Soldier's combat load weight by 6.4 pounds. It will incorporate a modern traverse and elevating mechanism that will maintain predetermined elevation throughout the full range of weapon traverse, as well as contain a series of index marks that will enable gunners to construct a range data card.

FY05 funding does not include \$8.4M for the Force Protection/Urgent Need Equipping Reprogramming done in support of Operation Iraqi Freedom.
